Note:
1. Dissertation coordinator will be assigned the load of 1 hr per week excluding his own guiding load. However, the dissertation guiding teacher will be assigned a load of one hr per candidate per week subject to the maximum of two period of teaching load irrespective of number of students/groups under him/her.
Unit I
Review of basic concepts in structural analysis: structure (structural elements, joints and supports, stability, rigidity and static indeterminacy, kinematic indeterminacy); loads (direct actions, indirect loading); response (equilibrium, compatibility, force-displacement relations); levels of analysis; analysis of statically determinate structures (trusses, beams, frames); applications of principle of virtual work and displacement-based and force-based energy principles; deriving stiffness and flexibility coefficients; Review of Force methods: Statically indeterminate structures (method of consistent deformations; theorem of least work); Review of Displacement Methods: Kinematically indeterminate structures (slope-deflection method; moment distribution method).

Unit II
Matrix concepts and Matrix analysis of structures: Matrix; vector; basic matrix operations; rank; solution of linear simultaneous equations; eigen values and eigenvectors. Introduction; coordinate systems; displacement and force transformation matrices; Contra-gradient principle; element and structure stiffness matrices; Element and structure flexibility matrices; equivalent joint loads; stiffness and flexibility approaches.

Matrix analysis of structures with axial elements: Introduction: Axial stiffness and flexibility; stiffness matrices for an axial element (two dof), plane truss element (four dof) and space truss element (six dof); One-dimensional axial structures: Analysis by conventional stiffness method (two dof per element) and reduced element stiffness method (single dof); Analysis by flexibility method; Plane trusses: Analysis by conventional stiffness method (four dof per element) and reduced element stiffness method (single dof); Analysis by flexibility method; Space trusses: Analysis by conventional stiffness method (six dof per element) and reduced element stiffness method (single dof).

Unit III
Matrix analysis of beams and grids: Conventional stiffness method for beams: Beam element stiffness (four dof); generation of stiffness matrix for continuous beam; dealing with internal hinges, hinged and guided-fixed end supports; accounting for shear deformations; Reduced stiffness method for beams: Beam element stiffness (two dof); dealing with moment releases, hinged and guided-fixed end supports; Flexibility method for fixed and continuous beams: Force transformation matrix; element flexibility matrix; solution procedure (including support movements); Stiffness method for grids: Introduction; torsional stiffness of grid element and advantage of torsion release; analysis by conventional stiffness method using grid element with six dof; analysis by reduced stiffness method (three dof per element)

Unit IV
Matrix analysis of plane and space frames:
Conventional stiffness method for plane frames: Element stiffness (six dof); generation of structure stiffness matrix and solution procedure; dealing with internal hinges and various end conditions; Reduced stiffness method for plane frames: Element stiffness (three dof); ignoring axial deformations; dealing with moment releases, hinged and guided-fixed end supports; Flexibility method for plane frames: Force transformation matrix; element flexibility matrix; solution procedure (including support movements); Ignoring axial deformations; Stiffness method for space frames: Introduction; element stiffness matrix of space frame element with 12 dof and 6 dof; coordinate transformations; analysis by reduced stiffness method (six dof per element);

Analysis of elastic instability and second-order effects: Effects of axial force on flexural stiffness: Review of buckling of ideal columns; flexural behaviour and stiffness measures for beam-columns - braced and unbraced, under axial compression; Solution by slope deflection method: Slope deflection equations for prismatic beam columns using stability functions; modifications for pinned and guided-fixed-end conditions; fixed-end moments in beam-columns; Solution by matrix method: Stiffness matrix for prismatic beam-column element; estimation of critical elastic buckling loads; second-order analysis

2. Structural Analysis G.S. Pandit & S.P.Gupta

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
MEM-503  NUMERICAL & OPTIMIZATION METHODS

L   P   Credits  Class Work  :  25 Marks
4   4                   Examination  :  75 Marks
                                  Total  :  100 Marks
                                  Duration of Examination  :  3 Hours

UNIT-I
ERRORS IN NUMERICAL CALCULATIONS: Introduction, Numbers and their accuracy, Absolute, relative and percentage errors and their analysis, General error formula.

UNIT-II
NUMERICAL DIFFERENTIATION AND INTERGRATION: Approximating the derivative, Numerical differentiation formulas, Introduction to Numerical quadrature, Newton-Cotes formula, Gaussion-Quadrature

Solution of Linear systems and nonlinear equations: Direct Methods, Gaussian elimination and pivoting, Matrix inversion, UV factorization, iterative methods for linear systems, Bracketing Methods for locating a root, Initial approximations and convergence criteria, Newton-Raphson and Secant methods

UNIT-III
SOLUTION OF DIFFERENTIAL EQUATIONS: Introduction to differential equations, Initial value problems, Euler’s methods, Runge-Kutta methods, Taylor series methods, Predictor-Corrector methods, Finite-difference method

PARTIAL DIFFERENTIAL EQUATIONS, EIGEN VALUES AND EIGEN VECTORS: Solution of hyperbolic, parabolic and elliptic equations, eigen value problem, Power and inverse power methods, Jacobi’s method for eigen value problems.

UNIT-IV
OPTIMIZATION METHODS: Optimal problem formulation, Engineering optimization problems; optimization algorithms: Single-Variable optimization algorithms, optimality criteria, Bracketing methods, Region-elimination methods, Point estimation method,

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
STUDENTS CAN USE RELEVANT INDIAN STANDARDS PUBLISHED BY BUREAU OF INDIAN STANDARD

UNIT-I

UNIT-II
Rheological behaviour of fresh Concrete-Properties of fresh and hardened concrete-Strength, Elastic properties, Creep and Shrinkage, Variability of concrete strength. Effects of age, aggregate content, and its shape, richness of mix, curing on Strength of Concrete, autogenous healing, tensile and flexural strength of concrete, maturity of concrete

UNIT-III
Modern trends in concrete manufacture and placement techniques, Methods of transportation, Placing and curing-extreme whether concreting, Special concreting methods, Vacuum dewatering of concrete-Under water concreting, Non destructive testing and quality control.

UNIT-IV
Durability of Concrete; Permeability of Concrete, Sulphate attack, Corrosion of rebar, Carbonation; freezing and thawing, Fire resistance of concrete

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT-I
Introduction to Dynamic analysis-Elements of vibratory systems and simple Harmonic Motion-Mathematical models of SDOF systems-Principle of Virtual displacements-Evaluation of damping resonance.

UNIT-II
Fourier series expression for loading-(blast or earthquake) – Duhamel’s integral-Numerical methods-expression for generalised system properties-vibration analysis Rayleigh’s method-Rayleigh-Ritz method.

UNIT-III
Evaluation of structural property matrices-Natural vibration-Solution of the Eigen value problem-Iteration due to Holzer and Stodola.
Idealisation of multi-storeyed frames –analysis to blast loading-Deterministic analysis of earthquake response-lumped SDOF system.

UNIT-IV
Differential equation of motion-Beam flexure including shear deformation and rotator inertia-vibration analysis using finite element method for beams and frames.

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
Unit- I
Introduction to CAD and its scope simple description of computer hardware.
- Micro, mini etc.
- Memory, processor

Computer Graphics: introduction, point plotting techniques, line drawing displays, two-three dimensional transformation, clipping and windowing, segmentation geometric modelling. Data base management, storing and retrieving of data.

Unit-II
Three dimensional graphics, curves and surfaces, hidden surface elimination, shading.
Graphic input devices. Graphic input technique, input functions. Raster graphic fundamentals, interactive raster graphics, raster graphic systems.

Unit-III
Computer aided linkage displays and synthesis, interactive acceleration analysis.

Unit-IV
Introduction to interactive computer programme for the design detailing of simple structural elements: RCC slab, beams, columns, isolated footings etc.
Steel typical members and connections.

1. Mix proportioning of concrete as per IS;ACI and BS methods
2. Aggregate testing
3. Cement Testing
4. Effects of admixtures
5. Admixture side effects
6. Non-destructive testing
7. Determination of tensile, compressive and flexural strengths of concrete

**Note:** The students will be required to carry out the experiments / exercises from the above list and any other two experiments either from the above list or designed by the department based on the theory course (Course Code Course Name)
The students will be required to carry out the following exercises, that are based on the theory course CED-501, Numerical & Optimization Methods, with the help of MatLab/C/C++ software, on personal computer.

List of exercises:

1. Write a programme that finds the solution of an equation in single variable using the method of successive bisection.
2. Write a programme that finds the solution of non-linear equation in single variable using the Newton Raphson/Secant.
3. Write a programme that finds the solution of a system of simultaneous algebraic equations using the Gaussian elimination procedure.
4. Write a programme that finds the solution of a system of simultaneous algebraic equations using the Gauss-Seidel iterative method.
5. Write a programme that finds the numerical solution of an ordinary differential equation using the Euler’s method.
6. Write a programme that finds the numerical solution of an ordinary differential equation using the Predictor-corrector method.
7. Write a programme that finds the numerical solution of an ordinary differential equation using the Predictor-corrector method.
8. Write a programme that finds the numerical solutions of Elliptic, Parabolic and Hyperbolic partial differential equations using the method of Finite Differences.
9. Write a programme that finds the minimum point of a single variable function in a specified interval using golden section search algorithm.
10. Write a programme that finds the minimum point of a multi variable function using Cauchy’s steepest descent algorithm.
11. Write a programme that finds the minimum point of a constrained optimization problem using penalty function method.
12. Write a programme that finds the optimum point of a constrained optimization problem using genetic algorithm.

*Note:* The students will be required to carry out the experiments/exercises from the above list and any other two experiments either from the above list or designed by the department based on the theory course (Course Code Course Name)
UNIT-I
Simple bending of plates-Assumption in thin plate theory-Different relationships-Different Boundary Conditions for plates-Plates subjected to lateral loads-Navier’s method for simple supported plates-levy’s method for general plates-Example problems with different types of loading.

UNIT-II
Circular plates subjected to Axi-symmetrical loads-concerned load, uniformly distributed load and varying load-Annular plate with end moments.
Rayleigh –Ritz method – Application to different problems-Finite difference method-Finite element methodology for plates-Orthotropic Plates

UNIT-III
Bending of anisotropic plates with emphasis on orthotropic plates-Material Orthotropy-Structural Orthotropy-Plates on elastic foundation.

UNIT-IV
Shells-Classification of shells-Membrane and bending theory for singly curved and doubly curved shells-Various approximations-Analysis of folded plates.

References

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
STUDENTS CAN USE RELEVANT INDIAN STANDARDS PUBLISHED BY BUREAU OF INDIAN STANDARD

UNIT-I
Principles of prestressing-Materials of prestressing-Systems of prestressing-Loss of prestress-Deflection of Prestressed Concrete members.

UNIT-II
Slabs-Pre-tensioned and Post-tensioned beams-Design for flexure, bond and shear –IS code provisions-Ultimate flexural and shear strength of prestressed concrete sections-Design of end anchorate zones using IS code method.

UNIT-III

UNIT-IV
Design of compression members and tension members. Circular prestressing-Water tanks-Pipes –Analysis and design-IS Codal provisions.

References
4. Note:
   5. 1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
   6. 2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT-1

UNIT-II
Beams and Beam columns-introduction-lateral buckling of beams-beam column with concentrated and distributed loads-effect of axial load on bending stiffness

UNIT-III

UNIT-IV
Buckling plates-Differential equation of plate buckling –critical loan on plates for various boundary conditions-Energy method-Finite difference method.

References

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
Computer Aided Drafting – Basic 2D objects-line, polyline, circle, ellipse-Dimensioning-Preparation of plan, elevation and section drawings of simple structural objects-Introduction to 3D-DBMS concepts-Civil Engg. Databases-Data entry & Reports. Spreadsheet concepts-Worksheet calculations in Civil Engineering-Regression & Matrix Inversion.

Development of C programs to solve problems using numerical techniques

1. Roots of an equation using Newton-Raphson method.
2. Solution of linear simultaneous equations using Gauss elimination.
3. Matrix inversion using GJ method
4. Linear regression line of given points.
6. Eigen value extraction power method.

Matrix methods of structural analysis and associated computer programme assembly of matrices

Analysis and Design through application packages. Design of steel and RC Structural elements.

References

**Note:** The students will be required to carry out the ---- experiments / exercises from the above list and any other two experiments either from the above list or designed by the department based on the theory course (**Course Code Course Name**)
STUDENTS CAN USE RELEVANT INDIAN STANDARDS PUBLISHED BY BUREAU OF INDIAN STANDARD

UNIT-1

Design of water Tanks; circular; rectangular; underground, surface and OHSR, using working stress and Limit State Method

UNIT-II

Bunkers & Silos; Janssen’s theory; Airy’s Theory; Bunkers with sloping bottom, high side wall, Battery of Bunkers with low and high side walls

UNIT-III

Reinforced Concrete chimneys, Reinforced Concrete Cooling Towers

UNIT-IV

Introduction of Design of machine foundation in concrete

References:
2. Jaikrishna & Jain OP, “Plain and Reinforced Concrete, Nem Chand & Brothers, Roorkee
3. Varghese P C “Advanced Reinforced Concrete Design” Prentice Hall India
4. Dayaratnam P “Reinforced Concrete Structures”, Oxford and IBH Publisher

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
Unit I
Linear elasticity; Stress; Principal Stress and Principal Planes; Stress Tensor; Spherical and Deviational Stress tensor; Equation of Equilibrium; Transformation of Stresses; Transformation Equations; Mohr’s Circle

Unit II
Types of strains, strain displacement relation; Properties of Strain Tensor; Small Strains and Elasticity; Rotations of Axes, Transformation Equations for Strains; Strain Rosettes; Compatibility concept and significance Stress strain relations; Generalized Hooke’s Law; Relation among Elastic Constants; theories of failures; Tresca condition; Von-Mises Condition; Displacement Equations of Equilibrium

Unit – III
Beams and bending; stresses under bending; straight beams and asymmetrical bending; Bernoulli hypothesis; centre of flexure; bending of curved beams; deflection of thick curved bars

Unit – IV
Boundary conditions; Description of an elastic problem as a boundary value problem; Plain stress, strain, axi-symmetric problems, large displacements and large strains Cartesian, cylindrical and spherical coordinates; Introduction to curvilinear coordinates, thermal strains Introduction to plasticity; yield condition; ideal elasto-plastic material; complete formulation for an elasto-plastic problem

References:
1. Timoshenko S.P. and J N Goodier, Theory of Elasticity; McGraw Hill
2. Calladine CR, Plasticity for Engineers; Ellis Herwood

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT-I
Design philosophy – Loading – Sequential loading, materials.
High risk behaviour, Rigid frames, braced frames, infilled frames, shear walls, coupled shear walls, wall–frames, tubular, cores, futrigger-braced and hybrid mega system.

UNIT-II
Approximate Analysis, Accurate Analysis and Reduction Techniques – Analysis of building for member forces-drift and twist – Computerised general three dimensional analysis.

UNIT-III
Structural elements-design, deflection, cracking, prestressing, shear flow-design for differential movements, creep and shrinkage effects, temperature effects and fire.

UNIT-IV
Overall buckling analysis of frames, wall-frames-second order effects of gravity of loading-simultaneous first order and P-delta analysis Translational – torsional instability, out of plane effects.

References

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT-I
Differential equilibrium equations-strain displacement relation-linear constitutive relation-special cases-Principle of stationary potential energy-application to finite element methods. Some numerical techniques in finite element Analysis.

UNIT-II

UNIT-III
Two dimensional isoparametric elements-Four noded quadrilateral elements-triangular elements-Computation of stiffness matrix for isoparametric elements-numerical integration (Gauss quadrature)-Convergence criteria for isoparametric elements.

Assemblage of elements-Direct stiffness method-Special characteristics of stiffness matrix-Boundary condition & reaction-Gauss elimination and LDLT decomposition-Basic steps in finite element analysis.

UNIT-IV

References

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT-I
Disaster Reduction; Earthquake resistant design of structures, Response spectra and design earthquake parameters, Principles and philosophies, Codal provisions, Factors affecting damage to structure, Enforcement of codal provisions, Strong motion instrumentation and data processing, Effective rescue operation, General planning and design aspects, Conventional earthquake resistant design, Seismic base isolation method, retrofitting, Training and lecturing at various levels, Preparedness to meet earthquake disaster, Programmes for public awareness, demonstrations and exhibitions, information management (Safety, emergencies, management and planning, design, response, user experience problems and case studies), proper land use practices, long term disaster preparedness measures.

UNIT-II
Precautions after a major earthquake, preparedness for medical supply Emergency care (First aid, Home remedies), Disposal of dead bodies (Human and Cattle), Care for old and orphans.

Indirect Damages; Damage due to ground failures, Landslides, rockslides, liquefaction, fire, floods, tsunamis, release of hazardous material like poisonous gas, nuclear radiation.

UNIT-III
Disaster Management; Management cell, Central crisis management core group, damage reconnaissance, Management of relief and rehabilitation (Infrastructure rehabilitation, Housing rehabilitation, Social rehabilitation), Role of volunteers, Emergency operation centres, Information system, Danger zone restrictions, Cooperation with local authority, Coordination for international relief, Role of Government, NGO’s, Business and donors, Role of remote sensing in relief operations, Information management and related technologies in engineering and disaster management.

UNIT IV
The Design and management of Disaster Information Resource Network, Asian Disaster Preparedness Centre, Regional data base, Contacts and Sources, CD-ROM Library for Natural Disaster Management, Regional Disaster Documentation Centre, Non Governmental Organisations.

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT-I
Review of probability space, random variables, functions of random variables, sequence of random variables and limit theorems for sums, products and extremes.

UNIT-II

UNIT-III

UNIT-IV
Reliability index based analysis: FORM and SORM. Monte Carlo simulations and variance reduction. Reliability of existing structures.

References

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
Introduction; History of expert system research e.g. acquaintance with researchers and their research fields. Current research activities. Conventional programs vs. Expert Systems Advantages and limitations of expert systems. Architecture of an expert system; Components of expert system; Knowledge base, Inference mechanism; User Interface

UNIT-II

Knowledge base; Knowledge Engineering; Nature of expert knowledge; Knowledge acquisition and knowledge representative e.g. rule based systems, Semature nets, frames, Validity nature base, working memory

UNIT-III

Inference Engine and user interface, techniques for inference mechanism, forward chaining and backward chaining. Interface language, terminal interface.

UNIT-IV

Development of expert systems; Problem formulation, Search spaces, Task for expert system, application to engineering analysis and design, consideration, operations representative application in Civil Engg.

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT-1

Criteria for foundation choice, bearing capacity, total and differential settlement, tolerance for various types of structures. Interpretation of soil profile for design parameters like Modulus of compressibility, modulus of sub grade reaction. Poisson ratio etc.

UNIT-II

Raft foundations for buildings and tower structures including effects of soil structure interaction and non-linearity, different types of rafts and, methods of analysis, precautions for construction of shallow foundations

UNIT-III

Pile foundations, types, method of installation codal practices for permissible loads under vertical and lateral loads, Diaphragm walls, design and construction, foundations for heavy structures.

UNIT-IV

Well and caisson foundations, Equipment foundation subjected to dynamic loads. Underground structures, strategies for instrumentation and monitoring of foundation performance.

Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.

2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
Unit I
Introduction: Role of Probability in Civil Engineering Problems; Examples.

Random Events: Definition of basic random events; Application of set theory in definition of composite even operations; Probability of events and definition of probability axioms; Solution of real life examples from civil engineering.

Random Variables: Definition of random variables - discrete and continuous; Probability definitions - PMF, PDF, CDF; Moments and expectations.

Unit II
Functions of Random Variables: Definition of probability distributions of functions of single random variables - exact methods and approximate methods; Moments and expectations of functions - direct and indirect methods.

Multiple Random Variables: Definition of joint, marginal, and conditional probability distributions; Definitions of moments and expectations, including the definition of correlation coefficient; Functions of multiple random variables.

Unit III
Common Probability Models: Discrete random variables - binomial distribution, Poisson distribution; Continuous random variables - exponential distribution, gamma distribution; Central limit theorem; Normal and lognormal distributions; External distributions.

Unit IV
Statistics and sampling: Goodness of fit tests; regression and correlation analyses; estimation of distribution parameters from statistics; Hypothesis testing and significance; Bayesian updating of distributions.

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT-I
Services in Residential, Commercial and Medical buildings; Sanitation, water supply, electric wiring, rain water disposal, lighting & illumination, calculation methods for these services. Air Conditioning & Ventilation: Natural ventilation, control cooling systems, modern systems of air conditioning, ducting systems, different mechanical means of air conditioning. CCD-CS: General principles of transmission and passage of sound reverberation, absorption, reflection, acoustic materials and their co-efficiency, principles of good acoustic design. Thermal Insulation: Behavior of various building materials & thermal conductivity. Thermal insulation for air conditioned interior spaces, working out air conditioning loads for different spaces; Fire Safety Dye.

UNIT-II
Architectural controls and building byelaws: Role of building byelaws in a city, local byelaws and architectural controls, facade control and zoning plans.

UNIT - III
Regional planning: Understanding of physical, social and economical parameters for regional planning.

UNIT-IV
Landscaping: Forces of man and nature, their relationship and effect on shaping landscape, site analysis.

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT-1

Introduction-definition and components of bridges. Layout and planning of bridges-classification, investigations for bridges, preliminary data collection, choice of type of the bridges, hydraulic design of bridges, traffic design of bridges.

UNIT-II

Analysis and design of superstructure of straight and curved bridge decks-loadings details, specification-reinforced concrete and steel decks. Decks of various types like slab, hollow and voided slab, beam and slam, box girder etc. Design of substructure-piers and abutments of different types. Analysis and design of foundations-shallow foundations (open Foundations), deep foundations-well foundations and caisson.

UNIT-III

Design and constructional aspects of foundations. Modern methods of construction of concrete and steel bridge-their impact on the analysis and the design. Introduction to analysis and design of long span bridges like suspension and cable stayed bridges.

UNIT-IV

Special aspects in analysis and design, based on construction methodology. Inspection and maintenance and rehabilitation of bridges.

**USE OF INDIAN STANDARDS IS ALLOWED IN EXAMINATION**

**UNIT-I**

Introduction to limit state method of design, provisions in the Indian standard codes for loading wind loads and seismic loads, design and detailing of concrete structures.

BIS Handbook for design, Examples of design using handbook SP-16.

**UNIT-II**

Design of Structures as per I.S. 1893 for Earthquake Resistant Design Construction.

Design and Detailing Requirements as per 4326-1993.

**UNIT-III**

Design and detailing of Earthen Buildings as per 13827-1993

Design and detailing of Masonry Structures as per I.S. 13828-1993

**UNIT-IV**

Design and Ductile Detailing of R.C.C. Structures of R.C.C. Structures as per I.S. 13920-1993

Repair and Seismic Strengthening of Building as per I.S. 13935-1993

**Note:**

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT-1

UNIT-II

UNIT-III

FERRO CEMENT: Constituent materials and their properties, Mechanical properties of fero cement, Construction techniques and application of ferro cement.

UNIT-IV

HIGH PERFORMANCE CONCRETE: Materials for high performance concrete, Supplementary cementing materials, Properties and durability of high performance concrete, Introduction to silica fume concrete, Properties and applications of silica fume concrete.

LIGHT WEIGHT CONCRETE: Properties of light weight concretes, Pumice concrete, Aerated cement mortars, No fines concrete, Design and applications of light weight concrete.

Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT-1

Materials and their behaviour under static and dynamic loads, allowable stresses, various design methods and codes, design consideration, design loads,

UNIT-II

Design of decking of template type steel structures, design of supporting legs, design of braces.

UNIT-III

Corrosion and other allowances, consideration of stress concentration, design of concrete platforms

UNIT-IV

Ingredient materials and protective measure, design of raft foundation, design of side walls, design of decking, design of composite structures.

UNIT-I

UNIT-II

Structural failure - materials and load effects - environment effect - Non-structural and structural repairs - Biocidal treatment and use of preservatives - deterioration or wood. Macro micro level failures - component and sub-system failures - failure theories - analytical models - cases and type of problem in components - safety evaluation.

UNIT-III

UNIT-IV

Bridge maintenance techniques - The refurbishment of buildings, legal responsibilities - Case studies - Definition of smartness - sensors - automatic and adaptive systems - smart components.

Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
A student will be required to take a problem related with the courses he has gone through in M.Tech. under a faculty member. He/she will submit the work done in the form of report with the certificate from his/her guide at the end of semester. The project will also be assessed by the external examiner and the student will make a presentation before the examiner.
The objective of this course is to provide a foundation for research work to the student. The student will get a topic from his/her supervisor. He/she will concentrate on the topic and will explore different aspects. He will make a presentation before a committee which will consist of

1. Chairperson
2. Supervisor and/ Co-supervisor
3. Faculty member nominated by the Chairperson preferably in Structural Engineering

The assessment will be based on the presentation and the report submitted by the student.
The dissertation started in III Semester will be completed in IV Semester and will be evaluated in the following manner.

Internal Assessment
Internal Assessment (class work evaluation) will be effected as per ordinance through interim report, presentation and discussion thereon by the following committee of three persons:

Chairperson of Department : Chairperson
M Tech Coordinator/ Sr Faculty : Member Secretary
Respective dissertation supervisor : Member

External Assessment
Final dissertation will be assessed by a panel of examiners consisting of the following:

Chairperson of Department : Chairperson
Respective Supervisor(s) : Member(s)
External expert : To be appointed by the University

Note: The External Expert must be from the respective area of specialization. The chairperson & M Tech Coordinator with mutual consultation will divide the submitted dissertations into groups depending upon the area of specialization and will recommend the list of experts for each group separately to the V C for selecting the examiners with the note that an external expert should be assigned a maximum of FIVE dissertations for evaluation.

The student will be required to submit THREE copies of his/her report to the M Tech Coordinator for record and processing.
