Unit-I: Organization of Human Body: Anatomical position, terminology, regions and planes. Basic anatomy and physiology of cells, Tissues (epithelial, connective, muscle, nervous, blood, glands), Permeability of cell membrane, genesis of membrane potential excitation of cell.

Unit-II: Skeletal System: Functions of skeletal system, Anatomy of long bone, Bone histology, Naming all bones of axial and appendicular skeleton, Formation, growth and repair, Structural and functional classification of joints, Types of movement, Calcium homeostasis.

Unit-III: Muscular System: Functions of muscular system, Names of all major muscles, Origin, insertion and action, Sliding Filament Model, Neuromuscular junction, Structure (gross and microscopic), Physiology of muscle contraction, Muscle metabolism (ATP), Fiber types, Exercise physiology.

Unit-IV: Cardiovascular System: Functions of circulatory system, Heart structures (chambers, valves, and vessels), Circulatory routes (systemic, pulmonary, coronary and hepatic portal), Blood vessels and pressure, Blood components, function and typing, Blood clotting, Regulation and conduction (EKG). Blood- composition, blood groups, role of R.B.C and W.B.C.

Unit-V: Lymphatic/Immune System: Functions of lymphatic system, Structures (vessels, nodes, cells), Lines of defense, Humoral immune response, Cell mediated immune response, Immune cell types.

Unit-VI: Digestive System: Functions of digestive organs, Modes of mechanical digestion, Chemical digestion (hormones, enzymes, pH), Absorption and elimination, Name parts of GI Tract and accessory organs, Nutrition and metabolism (production of ATP).

Unit-VIII: Respiratory System: General structure of respiratory system and functions- Lungs and Trachea, Respiratory Pathways, Functional aspects and mechanics of respiration, Mechanics and regulation of breathing, Gas exchange and gas laws, Hypoxia, effect of exercise.

Unit-IX: Nervous System: Functions of nervous system, Nerve cell anatomy, Neural physiology (action potential, synaptic transmission, Na/K pump), Brain anatomy and hemispheres, Spinal cord anatomy, reflex arc, PNS (autonomic and somatic), Sensory motor nerve functions.

Unit-X: Endocrine System: Functions of endocrine system, Naming organs/glands/cells and their hormones, Hormone types and target cells, Chemical messengers.

Unit-XI: Reproductive System: Functions reproductive systems, Male and female anatomy, Menstrual cycle, Meiosis/gamete production.

Unit-XII: Sensory System: Basic anatomy of special senses: Eye, Ear, Tongue, Nose and Skin, Properties and functions of nervous system with respect to sensory organs.
**Textbooks/ References:**

2. J. H. Green An Introduction to Human Physiology.

**Note:**

1. In the semester examination, the examiner will set eight questions in all, covering the entire syllabus. The students will be required to attempt only five questions.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
Unit I:

Unit II:
Good Manufacturing practice regulations, biomedical materials, quality assurance and quality control Labeling, Device failure, synthetic and biopolymers Bioerodible materials, Host reactions to biomaterials. Sterilization of Medical devices, Advances in Sterilization Technology of clean room, Polymeric materials for drug delivery systems, active and passive targeting, intelligent materials

Unit III:
Testing of blood-materials interaction, animal models, Degradation of material in biological environments, Chemical and biochemical degradation of polymers, Degradative effects of biological environment on metals and ceramics - corrosion, environmental stress cracking, Pathological classification and toxicity of biomaterials.

Unit IV Materials characterization - definition ; importance and application, Principles and general methods of compositional and structural characterization, techniques of X-ray, electron and neutron diffraction, EDAX, Thermal methods - DTA, TGA, DSC, DMA, temperature dependent rheology.

Unit V
Microscopy - optical, electron (TEM, SEM), Atomic force microscopy, optical profilometer and confocal laser scanning microscopy, Spectroscopy – UV-visible, fluorescence & phosphorescence IR, Raman and NMR spectroscopy, ESCA and Auger spectroscopy

Unit V: Artificial Organs:
Artificial Blood: Modern history of transfusion and blood substitutes, oxygen carrying artificial blood, Hb-based artificial blood.
Development aspects of artificial organs: Kidney, liver, heart, pancreas, liver etc.
Recent developments in Biomaterials, Legal issues related to development of biomaterials, Natural materials for various biomedical applications.

Textbooks/References:
4. Biomedical Engineering Fundamentals-Joseph D. Bronzine (Publisher CRC)
1. In the semester examination, the examiner will set eight questions in all, covering the entire syllabus. The students will be required to attempt only five questions.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
Unit I: **Introduction to Biomedical Instrumentation:** The age of biomedical engineering, Development of biomedical instrumentation, Biometrics, Introduction to the main-instrument system, Components of the main instrument system, Physiological Systems of the body, Problems encountered in measuring a living system, Design for bio-medical problems, diagnosis of disease and therapeutic applications.

Unit II: **Sources of Bioelectric potentials, Transducers and Electrodes:** Resting and Action Potentials, Propagation of Action Potentials, Biochemical Transducers, The transducer and transduction principles, Active transducers, Passive transducers, Transducers for biomedical applications, The Bioelectric Potentials Electrode theory, Bio Potential Electrodes, Study of various types of electrodes used in ECG, EEG, ENG, EOG and EMG, Measurement of ECG, EEG, ENG, EOG and EMG signals along with their diagnostic applications.

Unit III: **Basic Instrumentation system for Bio signals:** Design of a differential Bio potential Amplifier, Instrumentation amplifier; Transfer function representation; Filters; Frequency response and noise reduction; Frequency aliasing. A to D conversion and Computer based instrumentation, Instrumentation schemes of ECG, EEG, EMG, EOG and ENG and their functional circuits. Performance evaluation and testing by simulation techniques. Specifications.

Unit IV: **Clinical laboratory instrumentation:** Emerging trends in medical diagnostics and therapy, Clinical laboratory instrumentation, Blood cell counter and associated hematology system, Endoscopic diagnosis and foreign body removal, medical image rendering, blood gas analyzers, Design of haemodialysis Machine, Design of Electro surgical Generator or Cautery.

Unit V: **Bio telemetry and Instrumentation:** Introduction to biotelemetry, physiological parameters adaptable to biotelemetry, the components of biotelemetry system, implantable units, applications of telemetry in patient care.

Unit VI: **X – ray and radioisotope instrumentation:** Generation of Ionizing radiation, instrumentation for diagnostic X – rays, special techniques, instrumentation for the medical use of radioisotopes, radiation therapy. Physiological effects of electrical current, shock Hazards from electrical equipment, Methods of accident prevention. Digital Subtraction angiography system, Instrumentation in Dental Chair & Hand piece control, Interfacing of brailier with PC, Design of traction machine.

Unit VII: **Measurements in the Respiratory System:** The physiology of the respiratory system, Tests and instrumentation for the mechanics of breathing, Gas exchange and distribution, Respiratory diagnosing equipment (Spirometer).

**Textbooks/ References:**

2. Tompkins, Biomedical Digital Signal Processing.
8. Biomedical Signal Analysis – A Case Study Approach By Rangaray M. Rangayyan, (John Wiley and Sons Inc)
10. Medical Instrumentation Haughton by John C. Webster (Miflis Co, Boston USA).

Note:
1. In the semester examination, the examiner will set eight questions in all, covering the entire syllabus. The students will be required to attempt only five questions.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
Unit I Introduction to Atom:
Review of atomic structure and atomic particles with their properties, nuclear transitions and radioactive nuclei.

Unit II Medical Imaging Modalities:
Electron transitions and the generation of X-rays; Characteristics of X-ray beam and interaction with matter. Generation and detection of X-rays (radiography techniques). Principle and Theory of computer tomography (CT) scanning, spiral CT scanning & (positron emission tomography) PET scan. Physics of Nuclear Magnetic Resonance (NMR) imaging and its application in the field of diagnostics. Gamma camera, single photon emission computer tomography (SPECT) and other latest Medical imaging systems. Physics of ultrasound imaging, uses in diagnosis, Image quality description & patient risk, Theory and applications of optical, thermography imaging.

Unit III Basics of Image Processing:

Textbooks/References:

1. Albert Macouski, Medical Instrumentation, Prentice Hall
5. Encyclopaedia of Medical Devices and Instrumentation Vol. I, II, III, IV by John G. Webster, Wiley Publication
6. Biomedical Signal Analysis – A Case Study Approach By Rangaray M. Rangayyan, (John Wiley and Sons Inc)
Note:

1. In the semester examination, the examiner will set eight questions in all, covering the entire syllabus. The students will be required to attempt only five questions.

2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
BME 509  Microprocessor and Microcontroller for Medical Instrumentation  
M.Tech. Semester – I (Biomedical Engineering)

L  P  Class Work : 50 Marks
4  0  Theory : 100 Marks
  Total : 150 Marks
  Duration of Exam : 03 Hours
  Credits : 04

Unit I Introduction to Microprocessors:
Basic instruction set and architecture of 8085 and 8086 microprocessor. 
Applications of 8085 and 8086 microprocessors.

Unit II Introduction to Microcontrollers:
Working and Architecture of 8237 DMA controller and 8259. Basic architecture 
and instruction set of 8051 and AVR microcontroller with their applications.

Unit III: Applications of Microprocessors & Microcontrollers in Medical Instrumentation:
High speed digital design, Multi-layer PCB design, Mixed signal processing, 
Interfacing sensors – Blood pH, PO2, PCO2, Temperature, Optical, Displacement, 
blood flow. User interface - Message display unit, direct host control, Remote host 
control, LAN, GPIB interface, Interrupt handling, Analog interface, Add-on interface. Internet enabled Instruments, Portable instruments design. Typical 
applications: Spectrophotometer, Blood cell counter, Densitometer, aeromist.

Textbooks/ References:
1. The 8051 Microcontroller and Embedded Systems by Muhammad Ali Mazidi, Jainice Gillispe (Pearson Education)
3. The 8051 Microcontroller, Architecture, Programming and applications by Kenneth J. Ayala, (Penram International)
4. Programming and customizing 8051 Microcontroller by Myke Predco, TMH.
5. Micro controllers & its applications by B.S. Chhabra, Dhanpat Rai Pub. Co., India
8. Microprocessors and interfacing: Hall; TMH
9. The 8088 & 8086 Microprocessors-Programming, interfacing, Hardware & Applications :Triebel & Singh; PHI
11. Advanced Microprocessors and Interfacing: Badri Ram; TMH.

Note:
1. In the semester examination, the examiner will set eight questions in all, 
covering the entire syllabus. The students will be required to attempt only five 
questions.
2. The use of scientific calculator will be allowed in the examination. However, 
programmable calculator and cellular phone will not be allowed.
LIST OF EXPERIMENTS

1. Study of pulmonary function analyser using spirogram.
2. To study stress test analysis system (TMT) available in the laboratory
3. Designing of instrumentation amplifier using operational amplifier.
5. To determine Bradycardia and Tachycardia using ECG Trainer Kits.
6. To study and use Advance Biofeedback equipment available in the laboratory.
7. Circuitry explanation for patient leakage current.
8. To determine balancing condition for thermistor using wheat stone bridge.
9. To study of pressure changes using strain gauge transducer.
10. To Study defibrillator machine.
12. To study and record ENG waveforms using ENG system available in the laboratory.
13. Study of Pacemaker with simulator circuit
14. To study different EEG waveforms using EEG Trainer kit.

Note: Ten experiments are to be performed selecting any seven experiments from the above list. Remaining three experiments may either be performed from the above list, or designed and set by the department as per the scope of the syllabus.

Class Work : 50 Marks
P/VV : 50 Marks
Total : 100 Marks
Duration of Exam : 03 Hours
Credits : 02

LIST OF EXPERIMENTS

1. Background on MATLAB & the Image processing tool box.
3. Histogram Processing & Function Plotting.
4. Study various Ultrasound modes- A mode, B mode, AB mode, C mode and M mode.
5. Spatial filtering in Ultrasound Images & Speckle noise removal.
6. Generating Frequency domain filter.
7. Weiner filtering in Medical Images.
8. Constrained Least square filtering.
9. Colour Image Representation in MATLAB
10. Background on compression Techniques.
11. To study the construction and working of X-Ray equipment.

Note: Ten experiments are to be performed selecting any seven experiments from the above list. Remaining three experiments may either be performed from the above list, or designed and set by the department as per the scope of the syllabus.
BME 502  Biomechanics and Rehabilitation Engineering
M.Tech. Semester – II (Biomedical Engineering)

Unit I: Introduction: Biomechanics, Kinesiology, Kinematics and Dynamics of
Motion, Types of Motion, Kinematics Concepts, Vectors & Trigonometry, Position
of Anatomical Axis & Corresponding Movements of the Body Part.

Unit II: Tissue Biomechanics: Mechanics of Hard Tissue, Musculoskeletal Soft
Tissue Mechanics, Joint-articulating Surface Motion, Cochlear Mechanics,
Vestibular Mechanics

Unit III: Biofluid Mechanics: Basic Concepts; Mechanics of Heart, Lungs, Blood
Vessels, Heart Valves.

Unit IV: Gait and Sports Biomechanics: Gait Terminology, Analysis of Gait,
Exercise Physiology, Factors Affecting Mechanical Work in Humans.

Unit V: Prosthetics and Orthotics: Classification, Upper Limb prosthesis, Lower
Limb prosthesis, Spinal Orthosis, Recent Advances in Prosthesis and Orthosis;
Neural Prosthesis

Unit VI: Rehabilitation Engineering: Introduction to Rehabilitation,
Rehabilitation Team, Principles of Assistive Technology Assessment, Sensory
Rehabilitation- Tactual, Auditory, Visual, Speech.

Textbooks/ References:

**Unit I Bio-signals and their Characteristics:**

**Unit II Time Domain Modelling:**

**Unit III Digital Signal Processing Techniques:**
DSP fundamentals review, efficient computation of DSP, Wavelet transforms, Advanced DSP processor features and architecture [SHARC]. Digital communication, biomedical applications, Neuro-electric waveform analysis, DSP for elderly / disabled people. Motor Control, Speech recognition, Speaker Identification & Verification.

Data reduction Techniques, Power spectrum analysis, Sampling Theorem, aliasing Nyquist criteria, ADC’s and DAC’s. Convolution, Auto-correlation and cross-correlation. Study and application of Matlab signal processing toolbox on various real bio - medical signals.

**Textbooks/ References:**
3. Smart sensors By Chapman (ISA handbook)
4. Electrical Transducer Nomenclature & Terminology, 1975 (Reaffirmed 1982), ISA
5. Sensors handbook By Solomon
6. Biosensors By Brayan Eggins
7. Fiber optics sensors By Eric, Vdd (Wilen Intev Science)
9. Digital Signal Processing By Openhein Schafer
10. Digital Signal Processing By Rabinar Gold

**Note:**
1. In the semester examination, the examiner will set eight questions in all, covering the entire syllabus. The students will be required to attempt only five questions.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
BME 506  Bio-Mathematics  
M.Tech. Semester – II (Biomedical Engineering)

L     P     Class Work :  50 Marks
4     0     Theory : 100 Marks

Total : 150 Marks
Duration of Exam : 03 Hours
Credits : 04

Unit-II: Estimation, hypothesis testing: Confidence limits for means, t-distribution, chi-square distribution. Confidence limits for variances, t-tests, comparisons of variances Comparisons of several means: Analysis of Variance, A priori tests, A posteriori tests Two and three-way analysis of variance, Analysis of covariance.

Unit-III: Statistical Quality Control: Introduction, control charts of all types, ISO 9000 series & their importance, OC curves, advantages & limitations of SQL in industries.

Unit-IV: Random Variables & theoretical distributions: Discrete & continuous frequency distributions, stochastic process, Markovian chain, simulation techniques.

Unit-V: Reliability Theory: Theory of reliability, maintainability, availability, failure distribution, state dependent systems, series & parallel connection, redundancy of systems.

Unit-VI: Linear Programming Problems: Introduction & formations of the problems, graphical method, simplex method, duality concept in LPP & solution of the dual.

Unit-VII: Regression and correlation: Simple and multiple regression, nonlinear fitting, correlation nonparametric statistics, goodness of Fit tests, resampling methods, role of Computer in solving biostatistical problems.

Unit-VIII: Mathematical modeling and solution of biomedical problems namely respiratory rate, blood flow, cardiac output and impedance diffusion, ultra filtration etc. Operational research applied to the description of physiological systems and signal processing by interfacing instrumentation. Perturbation technique in dealing with the problems of thermodynamics.

Textbooks/ References:
2. A Brief on Tensor Analysis: James Simmonds, Springer-Verlog, 2005
3. A quick introduction to tensor analysis: Ruslan Sharipov
10. Biostatistics by S. Prasad, S.Chand.
11. Biostatistics by Negi, K.S., Rastogi Publisher.
12. Introduction to Biostatics by P.K. Banerjee, S.Chand.

Note:
1. In the semester examination, the examiner will set eight questions in all, covering the entire syllabus. The students will be required to attempt only five questions.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT I
Introduction, structural and organization of tissues: Epithelial, connective; vascularity and angiogenesis, basic wound healing, cell migration, current scope of development and use in therapeutic and in-vitro testing. Cell culture- Different cell types, progenitor cells and cell differentiations, different kind of matrix, cell-cell interaction. Aspect of cell culture: cell expansion, cell transfer, cell storage and cell characterization, Bioreactors.

UNIT II
Molecular biology aspect- Cell signaling molecules, growth factors, hormone and growth factor signaling, growth factor delivery in tissue engineering, cell attachment: differential cell adhesion, receptor-ligand binding, and Cell surface markers.

UNIT III
Introduction to biomaterials and scaffolds, Criteria of modifying biomaterials as tissue engineering scaffolds, Properties and types of scaffolds, Different methods employed in the synthesis of scaffolds, animal cell biology, stem cells, organization of cells into tissues, tissue microenvironment, tissue injury and wound healing 3-D architecture and cell incorporation. Engineering tissues for replacing bone, cartilage, tendons, ligaments, skin and liver.

UNIT IV
Basic immunology, response of body to foreign materials. Animal cell culture on scaffolds, consequences, optimization strategies and important considerations for Skin, Liver, Bone, Cartilage, Nerve and Vascular tissue engineering; Case study and regulatory issues-cell transplantation for liver, musculoskeletal, cardiovascular, neural, visceral tissue engineering. Ethical, FDA and regulatory issues.

Textbooks/ References:

Note:
1. In the semester examination, the examiner will set eight questions in all, covering the entire syllabus. The students will be required to attempt only five questions.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
Unit I Introduction to Medical Informatics:
Introduction to medical informatics, historical review of development of computers and informatics, structure of medical informatics, Application and importance of Medical informatics, Natural language processing, Knowledge and Models, Information and Communication Systems, Medical Computer Systems - Systematization of Computer Applications.

Unit II Management of Medical data:
Classification of medical data and information, uncertainty of medical data, examples of classification systems. Database management, development of database management system for a hospital environment.

Unit III Security Issues:

Unit IV Applications of Computers in Medical Field:

Unit V Introduction to Telemedicine:
Role of Telemedicine in healthcare, current applications of Telemedicine, medical peripheral devices, clinical education, hand held computers (PDA), Computer assisted surgery - Robotics, and computer assisted drug delivery.

Unit VI Computers & Artificial Intelligence:
Medical decision - support systems, Medical Expert System. Rationales for computer - aided decision making, Decision models - quantitative models, qualitative models, Knowledge Based systems - characteristic features of KBS, knowledge representation in KBS, Artificial intelligence methods

Textbooks/ References:
Note:
1. In the semester examination, the examiner will set eight questions in all, covering the entire syllabus. The students will be required to attempt only five questions.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
1. To study different types of biosensors available in the laboratory.
2. Design a low pass filter and plot graph of gain versus frequency.
3. Design a high pass filter and plot graph of gain versus frequency.
4. Design a band pass filter and plot graph of gain versus frequency.
5. Study data reduction techniques using Digiscope.
6. Using digiscope study waveform generation and power spectrum analysis.
7. Designing of IIR and FIR filters using digiscope.
8. To study different ADC & DAC systems available in the laboratory.
9. Study the cross correlation, auto correlation and convolution functions using digiscope.
10. Develop a MATLAB program to perform synchronized averaging for a noisy signal.
11. Write a MATLAB program to compute RMS value at each instant for the EMG signal.
12. Write a MATLAB program to compute the wavelet coefficients for EEG signal using continuous wavelet transform.
13. Write a MATLAB program for performing discrete wavelet transform of the various bio-signals.

**Note:** Ten experiments are to be performed selecting any seven experiments from the above list. Remaining three experiments may either be performed from the above list, or designed and set by the department as per the scope of the syllabus.
BME 514  Biomechanics lab
M.Tech. Semester – II (Biomedical Engineering)

L  P  
0  2

Class Work :  50 Marks
Theory : 50 Marks
Total : 150 Marks
Duration of Exam :  03 Hours
Credits :  02

1. Stress strain analysis of lower limb using BIOPAC.
2. Stress strain analysis of upper limb using BIOPAC.
3. To study the hardness of given bone using hardness tester/UTM.
4. To determine the moment of Inertia of a stepped pulley or a flywheel.
5. To study recording and analysis of EMG signals using Biopac MP-100 system available in the laboratory.
6. To verify Bernoulli’s Theorem, for fluid flow through pipes.
7. To study cardio- EMG analysis using ergometry and TMT system available in the laboratory.
8. To study muscle force using dynamometer.
9. To study EMG signal analysis using Advance Biofeedback system available in the laboratory.
10. To determine the center of gravity of human body.

Note: Ten experiments are to be performed selecting any seven experiments from the above list. Remaining three experiments may either be performed from the above list, or designed and set by the department as per the scope of the syllabus.

Unit I: Introduction to Biomedical Ethics:
Sources of Medical Law and Ethics, Nature and sources of medical ethics, Sources of medical law, Value theory Risk and Reliability-Decision theory, Injury and damage control, Epidemiology of accidents, Human tolerance to energy inputs, Biomedical & Biomechanics aspects of long term exposure to hazardous environment. Standards, Ethics & IPR issues related to biomedical engineering.

Unit II: Medical Legal Issues:
The law in relation to abortion, the ethics of abortion, Reproductive Technology and surrogacy, the law in relation to end of life issues, the ethics of end of life issues and Research.

Unit III: Device regulation standards:
Classifications and requirements of Medical devices, Harmonized standards, CE approval, Quality Assurance and Quality Control – Definition of quality, quality management, principles of TQM, measures for Quality Control. Safety & Testing of Medical devices – patenting norms and related issues.

Unit IV: Maintaining professional standards:
Maintaining standards and regulation, presenting evidence and reports, the Coroner's court, the General Medical Council, rights of Doctors.

Textbooks/References:
3. Ronald Munson's Intervention and Reflection: Basic Issues in Medical Ethics 5th Ed.
4. Ethics of Health Care: An Introductory Textbook by Benedict M. Ashley, Kevin D. O'Rourke, Georgetown University Press; 3rd edition, 2002

Note:
1. In the semester examination, the examiner will set eight questions in all, covering the entire syllabus. The students will be required to attempt only five questions.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
BME 603  Soft Computing Methods for Biomedical Engineers

4    0

Theory :    100 Marks
Total :    150 Marks
Duration of Exam :    03 Hours
Credits :    04

Unit II: Impedance Techniques: Detection of physiological parameters using impedance techniques: Impedance and current distribution, bipolar and tetra polar circuits, skin impedance, galvanic skin response measurement, total body impedance, cardiac output, neural activity, respiratory activity, impedance plethysmography.

Unit III: Biomedical Amplifiers: Special features of bioelectric amplifiers, safety requirements, realization of bioelectric amplifiers, carrier amplifiers, chopper amplifiers, phase sensitive detector, isolation amplifiers, and instrumentation amplifiers.

Unit IV: Recording and Processing Systems: Recording of bioelectric events- Analog recording system, digital recording and data logging including the use of micro-processor and flash memory chips. Recording of ECG, EMG, ENG, EOG & EEG signals.

Textbooks/References:

Note:
1. In the semester examination, the examiner will set eight questions in all, covering the entire syllabus. The students will be required to attempt only five questions.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.

UNIT-II Optical sources & Photo Detectors: Creation of Photons, LED, ILD, Photodetectors- Characteristics, Types of Photodiodes, Photodiode Parameters, Detector Noise, Speed of Response, SNR.

Textbooks/ References:
5. Fiber Optics Communication by Senior
6. Optical Communication by Keiser

Note:
1. In the semester examination, the examiner will set eight questions in all, covering the entire syllabus. The students will be required to attempt only five questions.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT I
Introduction to Bio-Nanotechnology, Cellular nanostructures, self-assembly of colloidal nanostructures of biological relevance, bioactive nanoparticles (respiratory surfactants, magnetic nanoparticles).

UNIT II
Nanoparticles for drug delivery (including solid lipid nanoparticles, synthetic and biopolymeric nanoparticles), carbon nanotubes, polymeric nanofibers, Implications in neuroscience, tissue engineering and cancer therapy,

UNIT III
Environmental and safety aspects of bio-nanotechnology. Introduction to Nanotechnology, Multilayer Thin Film: Polyelectrolyte multilayers, coated colloids, smart capsules, LbL self-assembly, Colloids and Colloid Assemblies for Bio-nanotechnology.

UNIT IV

Textbooks / References:

Note:
1. In the semester examination, the examiner will set eight questions in all, covering the entire syllabus. The students will be required to attempt only five questions.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT I
Introduction to Technological Control System, Transfer functions, Mathematical Approaches, System Stability, Feedback Concept and Stability Analysis.

UNIT II
Introduction to Biological Control System, similarities and differences, Transfer of substances between compartments, Biological receptors, characteristics, Transfer function model, Bio feedback.

UNIT III

UNIT IV
Modelling of Human Thermal Regulatory System, Parameters Involved, Control System Models etc. Biochemistry of Digestion. Type of Heat Loss from the Body, Model of Heat Transfer between Subsystems of Human Body like Skin, Core, etc., and System within Body, Body Environment etc.

UNIT V
Respiratory control system, Modelling of O₂ Uptake, Mass Balancing by Lungs, Gas Transport Mechanism of Lungs, O₂ and CO₂ Transport in Blood and Tissue. Introduction to Eye Tracking and Control. Cardio Vascular Control System, Servo mechanism, pupil control system.

UNIT VI
Matlab in Control Applications. Desing of Biomedical Control Systems, few Case Studies.

BME 617 Biological Control System
M.Tech. Semester – III (Biomedical Engineering)

L P
4 0

Class Work : 50 Marks
Theory : 100 Marks
Total : 150 Marks
Duration of Exam : 03 Hours
Credits : 04
Note:
1. In the semester examination, the examiner will set eight questions in all, covering the entire syllabus. The students will be required to attempt only five questions.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT I
Review of atomic structure and atomic particles: electrons, protons, neutrons, positrons, neutrinos, etc.; Classification of elements as per the periodic table; Atomic transitions - electron transitions and the generation of x-rays; Nuclear transitions and radioactive decay of nuclei.

UNIT II
Characteristics of x-ray beams; Interaction with matter; Attenuation and interaction of x-rays in the human body; Films and fluoroscopic screens;

UNIT III
Detrimental effects of radiation; Radiation safety and dosimetry; Overview of generation of radioisotopes, radiotherapy, Physics of Nuclear Magnetic Resonance and its application in the field of diagnostic medicine.

UNIT IV
Wave fundamentals, generation of ultrasound, Interaction of Ultrasound with tissue; Physics of ultrasound imaging; Uses in diagnosis.

BME 621  Biomedical Entrepreneurship
M.Tech. Semester – III (Biomedical Engineering)

L  P  Class Work :  50 Marks
4  0  Theory :  100 Marks
                  Total :  150 Marks
                  Duration of Exam :  03 Hours
                  Credits :  04

Unit I: Introduction:
Meaning, definition and functions of an entrepreneur, qualities of a good
entrepreneur, role of entrepreneur in economic development of a country,
Government measures and policy in developing entrepreneurship and promotion of
small scale industries. Problems faced by SSI related to marketing, management of
new products, power, finance, raw material, capacity, rehabilitation of sick units.

Unit II: Financial Institutions:
Commercial banks and term lending in India, role of different financial agencies in
promoting entrepreneur viz. Finance Corporation of India, State Financial
Corporation, Industrial Development bank of India, Unit Trust of India.

Unit III: Role & responsibilities of a Biomedical Engineer in society:
Duties of a biomedical engineer, scope areas and opportunities for Entrepreneurship
in Biomedical Engineering.

Textbook/ References:

1. Entrepreneurship of Small Scale Industries-Deshpande Manohar D. (Asian
   Publishers, New Delhi).
3. Emerging Trends in Entrepreneurship in Entrepreneurship Development Theories
   & Practices-Singh P. Narendra (Int. Founder, ND).

Note:
1. In the semester examination, the examiner will set eight questions in all,
   covering the entire syllabus. The students will be required to attempt only five
   questions.
2. The use of scientific calculator will be allowed in the examination. However,
   programmable calculator and cellular phone will not be allowed.

Total : 150 Marks
Duration of Exam : 03 Hours
Credits : 04

UNIT II: Medical and Auxiliary Services: Emergency services, Clinical laboratories, Radiological services, Diagnostic radiology, Radiation therapy department, Nuclear Medicine, Surgical Department, Physical Medicine and Rehabilitation, CATH lab, OT: Design and related equipments.

UNIT III: Nursing Services: General nursing unit, Central Nurse Station, Paediatric nursing unit, Isolation rooms, Intensive Care Unit(ICU), Coronary Care Unit(CCU), Newborn nurseries.

UNIT IV: Engineering and Biomedical Engineering Department: Engineering department: Functions, Location, Design, Organization, Maintenance management. Biomedical Engineering department: Functions, Designs, Space facilities, Utilities, Hospital wiring system.

UNIT V: Hospital Services: Electrical system, Air conditioning services, Centralised gas system, Communication systems, Transportation, CSSD.

UNIT VI: Safety and Security in the Hospital: Hospital safety rules, Security and loss prevention, Fire safety, Bomb threat, Alarm systems, Disaster and Disaster preparedness plan, Safety codes for electrical and medical equipments, Medical standards for hospitals and equipments.

Note:
1. In the semester examination, the examiner will set eight questions in all, covering the entire syllabus. The students will be required to attempt only five questions.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT I
Introduction to Ergonomics and its application; Man-Machine-Environment System; Anthropometry and joint motions; Work Posture, Environmental factors and human performance.

UNIT II
Designing of Controls and Displays, Control panel Organization; Principals of product design; Problem solving;

UNIT III
Frequent types of injuries related to work place design, repetitive motion, and cumulative trauma disorders, preventing ergonomics related injuries by redesigning the work place.

UNIT IV
Seminar on ergonomics related issues in Medicine.

BME 627  Surface Engineering of Surgical Tools & Medical Devices  
M.Tech. Semester – III (Biomedical Engineering)  

L  P  Class Work :  50 Marks  
4  0  Theory :  100 Marks  
Total :  150 Marks  
Duration of Exam :  03 Hours  
Credits :  04  

UNIT I  
Introduction to surface engineering, Need for surface engineering of Medical implants and equipment. Surface Modification of Biomaterials, Wettability in Biomaterials Science and Modification Techniques, Atomic Scale Machining of Surfaces. Anodization, Titanium Dioxide Coatings in Medical Device Applications  

UNIT II  
The Effect of Shape and Surface Modification on the Corrosion of Biomedical Nitinol Alloy Wires exposed to Saline Solution. Cardiovascular Interventional and Implantable Devices ; Surface Engineering Artificial Heart Valves to Improve Quality of Life and Lifetime using Modified Diamond-like Coatings, Diamond Surgical Tools, Dental Tool Technology. Nanocrystalline Diamond: Deposition Routes and Clinical Applications Advanced techniques of modifying implant material surfaces (like Laser Surface Treatmen, PVD, CVD, ion implantation etc.)  

UNIT III  
Environmental Engineering Controls and Monitoring in Medical Device Manufacturing, Biomaterial-Cell-Tissue Interactions In Surface Engineered Carbon-Based Biomedical Implants and Devices, Machining Cancellous Bone Prior to Prosthetic Implantation, Bonelike Graft for Regenerative Bone Applications. Titanium and Titanium Alloy Applications in Medicine.

1. In the semester examination, the examiner will set eight questions in all, covering the entire syllabus. The students will be required to attempt only five questions.  
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT I
Action potential of excitable cells: Quantitative description, Hodgkin-Huxley model, significance of parameters in Hodgkin-Huxley equations; Voltage-clamp experiments: design, and analysis of results; Factors determining the initiation, amplitudes, and kinetic properties of action potentials.

UNIT II
Passive membrane electrical properties: Cellular resistance, capacitance, time constant and space constant, methods of measurement; Importance in cellular excitation and signaling: Impulse propagation.

UNIT III
Electrophysiology of synaptic transmission: Prejunctional and postjunctional electrical events; time courses of transmitter-activated membrane currents and potentials in skeletal and smooth muscle; Electrical models of the skeletal and smooth muscle membranes.

UNIT IV: Introduction to Bioelectromagnetism, the Concept of Bioelectromagnetism; Anatomical and Physiological basis of Bioelectromagnetism; Importance and History of Bioelectromagnetism.

UNIT V: Bioelectric Sources and Conductors and their Modelling, Electric and Magnetic Measurement of the Electric Activity of Neural Tissue and Heart, Measurement of the Intrinsic Electric Properties of Biological Tissues. Other Bioelectromagnetic Phenomena

1. In the semester examination, the examiner will set eight questions in all, covering the entire syllabus. The students will be required to attempt only five questions.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT I
Organization of viral, prokaryotic and eukaryotic genomes: Cot curves, repetitive and unique sequences, kinetics and sequence complexities, satellite DNA, DNA melting and buoyant density; Organelle genomes, Rearrangement and amplification of DNA in the genome.

UNIT II
DNA replication models, DNA polymerases - mode of action, DNA damage, DNA repair and recombination. RNA polymerases and reverse transcriptase: structure and mechanism of action.

UNIT III
Enzymes involved in DNA modifications, methylases, demethylases, DNases, DNA gyrase, Topoisomerase, Organization structures and function of ribonucleoproteins, Protein synthesis: Genetic code, mechanism and regulation of protein synthesis.

UNIT IV
Development, Molecular basis of development in animals and plants, Homeobox gene expression and Pattern formation in development, DNA methylation, gene expression, chromosomal inactivation and sex determination, Oncogenes, proto-oncogenes and etiology of cancer.

BME 609    Industrial/ Hospital Training  
M.Tech. Semester – III (Biomedical Engineering) 

L    P    Class Work : 50 Marks  
0    2    Practical : 50 Marks  
                  Total : 100 Marks  
                  Duration of Exam : 03 Hours  
                  Credits : 02

At the end of 2\textsuperscript{nd} semester each student would undergo four weeks Professional Training in an Industry/ Institute/ Professional / Organization/ Research Laboratory etc. working in the area of Biomedical Engineering with the prior approval of the Training and Placement Officer of the University & Chairman of the Department and submit in the department a typed bounded report along with a certificate from the organization. 
The typed report should be in a prescribed format made available by the M.Tech coordinator.  
The report will be evaluated in the III Semester by a Committee consisting of three teachers from different specialization to be constituted by the Chairperson of the Department. The basis of evaluation will primarily be the knowledge and exposure of the student towards different processes and the functioning of the organization.  
The student will interact with the committee through presentation to demonstrate his/her learning.  
Teachers associated with evaluation work will be assigned 02 periods per week load.
The primary objective of this course is to develop in student the capacity for analysis & judgment and the ability to carry out independent investigation in design/development through a dissertation work involving creativity, innovation and ingenuity. The work must start with comprehensive literature search and critical appreciation thereof so as to select research problem the student wishes to work on.

Each student will carry out independent dissertation under the supervision of some teacher(s) who will be called Supervisor(s). In no case more than two supervisors can be associated with one dissertation work.

The dissertation involving design/ fabrication/ testing/ computer simulation/ case studies etc. which commences in the III Semester will be completed in IV Semester. The evaluation of the dissertation phase–I besides approval of the dissertation topic of the students will be done by a committee constituted as under:

Chairperson of Department : Chairperson
M Tech Coordinator/ Sr. Faculty : Member Secretary
Respective dissertation supervisor : Member

The student will be required to submit two copies of his/her report to the department for record (one copy each for the department and participating teacher).
The objectives of the course remain:

- To learn how to carry out literature search
- To learn the art of technical report writing
- To learn the art of verbal communication with the help of modern presentation techniques

A student will select a topic in emerging areas of Engineering & Technology and will carry out the task under the supervision of a teacher assigned by the department. He/She will give a seminar talk on the same before a committee constituted by the chairperson the department. The committee should comprise of 2 or 3 faculty members from different specializations. The teacher(s) associated in the committee will each be assigned 2 hours teaching load per week.

However, supervision of seminar topic will be in addition to the regular teaching load.
BME 602  Dissertation

The dissertation started in III Semester will be completed in IV Semester and will be evaluated in the following manner.

**Internal Assessment**

Internal Assessment (class work evaluation) will be effected as per ordinance through interim report, presentation and discussion thereon by the following committee of three persons:

- Chairperson of Department : Chairperson
- M Tech Coordinator/ Sr Faculty : Member Secretary
- Respective dissertation supervisor : Member

**External Assessment**

Final dissertation will be assessed by a panel of examiners consisting of the following:

- Chairperson of Department : Chairperson
- Respective Supervisor(s) : Member(s)
- External expert : To be appointed by the University

**Note:** The External Expert must be from the respective area of specialization. The Chairperson & M Tech Coordinator with mutual consultation will divide the submitted dissertations into groups depending upon the area of specialization and will recommend the list of experts for each group separately to the Vice Chancellor for selecting the examiners with the note that an external expert should be assigned a maximum of FIVE dissertations for evaluation.

The student will be required to submit THREE copies of his/her report to the M Tech Coordinator for record and processing.
