### Note:

1. Every student has to participate in the sports activities. Minimum one hour is fixed for sports activities either in the morning or evening. Weightage of sports is given in General Proficiency & Ethics Syllabus.
2. The students will be allowed to use non-programmable scientific calculator. However, sharing/exchange of calculator is prohibited in the examination.
3. Electronics gadgets including Cellular phones are not allowed in the examination.
4. All the branches are to be divided into group ‘A’ and ‘B’ as per the suitability of the institute/college, so that there is an equitable distribution of teaching load in odd and even semesters.

Note:
1. Every student has to participate in the sports activities. Minimum one hour is fixed for sports activities either in the morning or evening. Weightage of Sports is given in General Proficiency & Ethics Syllabus.
2. Each student has to undergo a workshop at least 4 weeks (80-100 hours) at the end of II semester during summer vacations. The evaluation of this training shall be carried out in the III semester.
3. The students will be allowed to use non-programmable scientific calculator. However, sharing/exchange of calculator is prohibited in the examination.
4. Electronics gadgets including Cellular phones are not allowed in the examination.
5. All the branches are to be divided into group ‘A’ and ‘B’ as per the suitability of the institute/college, so that there is an equitable distribution of teaching load in odd and even semesters.
Objective

The course aims at developing the desired language (English) skills of students of engineering and technology so that they become proficient in communication to excel in their professional lives. The course has been designed so as to enhance their linguistic and communicative competence.

Course Content

UNIT I

Communicative Grammar:

A) Spotting the errors pertaining to tenses, conditional sentences, Concord – grammatical concord, notional concord and the principle of proximity b/w subject and verb

B) Voice, Reported Speech.

UNIT II

Language through Literature:

Linguistic Reading of the following texts

A) ‘Kabuliwallah’ by Rabindranath Tagore*

B) ‘Am I Blue?’ by Alice Walker*

C) ‘If You are Wrong, Admit It’ by Dale Carnegie*

D) ‘Engine Trouble’ by R.K. Narayan*

The prescribed texts will be used as case studies for various components of the syllabus. * the Source is given in the list of Texts Books given below.

UNIT III

Group Communication:

A) Communication: concept, Process and Barriers

B) Communicating using Standard Pronunciation with the help of IPA

C) Formal Speaking with peers (e.g. discussion, talks on current issues in a class)

B) Writing official letters on issues concerning students and social life

C) Writing small reports on scientific issues, IT issues, University fests/programmes

C) E-mail writing and writing for web

UNIT IV

Communicative Creativity:

A) Comprehension: Extracting, interpreting, summarizing, reviewing and analyzing the prescribed texts.

B) Composition: Developing themes and situations through role play activities or dialogue writing.

Contd.

TEXT BOOKS
2. Communicative English for Engineers and Professionals by Nitin Bhatnagar & Mamta Bhatnagar New Delhi: Pearson / Longman

**SUGGESTED READING**

1. Pink, M.A. and S.E. Thomas. *English Grammar, Composition and Correspondence*. Delhi: S. Chand and Sons

**SCHEME OF END SEMESTER EXAMINATION (MAJOR TEST)**

**Theory**

1. The duration of the exam will be 3 hours.
2. The Question Paper for this theory course shall have seven questions in all covering all the units of the syllabus.
3. The student is required to attempt all the seven questions.
4. Questions No. 1 based on Unit I is of 15 marks. It may be in the form of ‘Do as directed: trace the error, choose the correct alternative, supply the correct alternative/s, change the voice, convert the speech from direct to indirect or vice-versa’.
5. Question no 2 and 3 based on prescribed texts in Unit II. Question no 2 of 10 marks is to evaluate the comprehension of the text through short answer questions or a long answer question to assess the students’ reading comprehension, interpretative and analytical abilities. Question no 3 of 15 marks will judge the linguistic aspect of the text such as using a particular word in its various syntactic forms like noun, adjective, verb etc.; matching the lists of words and their explanation; providing opposite/similar meanings and other grammar components prescribed in Unit I of the syllabus.
6. Question no 4 based on Unit III is of 10 marks. It may be in the form of transcription of words given, describe an event, classmate, discuss an issue etc.
7. Question no 5 based on Unit III is of 10 marks. It requires the student to frame either a small report on a topic given or write the given official letter, or e-mail a message.
8. Question no 6 based on unit IV is of 10 marks. It evaluates the Comprehension and Interpretation of the texts prescribed in Unit II. The vocabulary, general
understanding and interpretation of the content may be evaluated in the form of question answer exercise, culling out important points, suggesting a suitable topic/title, summarising and interpreting.

9. Question No. 7 based on unit IV is of 5 marks. It requires the student to develop a hypothetical situation in a dialogue form, or to develop an outline, key expression, for role play activity.

UNIT-I

INFINITE SERIES: Convergence and divergence, Comparison, D’Alembert’s ratio, Integral, Raabe’s, Logarithmic and Cauchy root tests, Alternating series, Absolute and conditional convergence. Applications of Differentiation: Taylor’s and Maclaurin’s series, Asymptotes, Curvature Asymptotes.

UNIT-II

PARTIAL DIFFERENTIATION & ITS APPLICATIONS: Functions of two or more variables;
partial derivatives, Total differential and differentiability, Derivatives of composite and implicit functions, Jacobians, Higher order partial derivatives.

Homogeneous functions, Euler’s theorem, Taylor’s series for functions of two variables (without proof), maxima-minima of function of two variables, Lagrange’s method of undetermined multipliers, Differentiation under integral sign.

UNIT-III
APPLICATIONS OF SINGLE & MULTIPLE INTEGRATION: Applications of single integration to find volume of solids and surface area of solids of revolution. Double integral, change of order of integration, Double integral in polar coordinates, Applications of double integral to find area enclosed by plane curves and volume of solids of revolution.

Triple integral, volume of solids, change of variables, Beta and gamma functions and relationship between them.

UNIT-IV
VECTOR CALCULUS: Differentiation of vectors, scalar and vector point functions Gradient of a scalar field and directional derivative, divergence and curl of a vector field and their physical interpretations.
Integration of vectors, line integral, surface integral, volume integral, Green, Stoke's and Gauss theorems (without proof) and their simple applications.

TEXT BOOKS:

REFERENCE BOOKS:

Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.

UNIT-I

PHYSICAL OPTICS:

Interference: Division of wave front-Fresnel’s Biprism, Division of amplitude – Newton’s rings, Michelson interferometer, applications.

Diffraction: Difference between Fraunhofer and Fresnel diffraction, Fraunhofer diffusion through a slit, Plane transmission diffraction grating and its spectra, dispersive and resolving
powers.

**Polarization**: Polarised and unpolarized light, double refraction, Nicol prism, quarter and half wave plates, Plane, Elliptically & circularly polarised light. Polarimetry: Biquartz and Laurent's half-shade polarimeters.

**UNIT-II**

**LASER & FIBRE OPTICS**: Introduction, Spontaneous and stimulated emissions, Laser action, characteristics of laser beam, Ruby laser, He-Ne, Nd-Yag and semiconductor lasers, applications of laser.
Introduction, Propagation of light in fibres, Types of fiber (pulse & continuous), numerical aperture, Modes of propagation in optical fibre, application of optical fibre.

**ACOUSTIC OF BUILDINGS**: Introduction, Reverberation, Sabine's formula for reverberation time, Absorption coefficient and its measurements, factors affecting the architectural acoustics and their remedy, Sound absorbing materials.

**UNIT-III**

**TRANSMISSION OF HEAT AND THERMAL RADIATION**

Modes of transmission of heat, Thermal conductivity, Rectilinear flow of heat through a rod, Radial flow of heat through a spherical shell, determination of Thermal conductivity of good and bad conductors.
Black body, Emissive and Absorptive Powers, Wein’s Displacement Law, Kirchhoff’s Law, Stefan’s Law, Determination of Stefan’s Constant.

**UNIT-IV**

**NUCLEAR & ELEMENTARY IDEA OF PARTICLE PHYSICS**

Outline of interaction of charged particles and of Gamma-rays with matter. Counters: Gas filled counters (Ionization Chamber, Proportional Counter and G M Counter). Detector: Scintillation detector, Semiconductor detectors (p-n junction detector), Biological effects of nuclear radiation.

Introduction to elementary particles, Interaction in particle physics: strong, electromagnetic, weak and gravitational.

**TEXT BOOKS**:

1. A text book of Optics – Brij Lal and Subramanyam
2. Perspectives of Modern Physics - Arthur Beiser (TMH)
3. Modern Engineering Physics – A.S. Vasudeva (S. Chand)
6. Engineering Physics by S.P. Taneja (Chand Pub.)

**REFERENCE BOOKS**:

**Note:**
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.

2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.

**UNIT-I**

**INTRODUCTION:** Introduction to Manufacturing Processes and their Classification, automation in manufacturing, Industrial Safety; Introduction, Types of Accidents, Causes and Common Sources of Accidents, Methods of Safety, Electric Safety Measures, First Aid.
Plant Layout, Principles of Plant Layout, Objectives of Layout, Types of Plant and shop layouts and their Advantages.

UNIT-II

FOUNDRY: Introduction to Casting Processes, Basic Steps in Casting Process, Pattern, Types of Patterns, Pattern allowances, Risers, Runners, Gates, Molding Sand and its composition, Sand Preparation, Molding Methods, Core Sands and Core Making, Core Assembly, Mold Assembly, Melting (Cupola) and Pouring, Fettling, Casting Defects and Remedies, Testing of Castings

UNIT-III

INTRODUCTION TO MACHINE TOOLS: Specifications and Uses of commonly used Machine Tools in a Workshop such as Lathe, Shaper, Planer, Milling, Drilling, Slotter, Introduction to Metal Cutting, Nomenclature of a Single Points Cutting Tool and Tool Wear, Mechanics of Chips Formation, Type of Chips, Use of Coolants in machining.

UNIT-IV

Text Books:

UNIT-I
THERMODYNAMICS – Second law, concept of entropy, entropy change for ideal gas, free energy and work functions, free energy change, chemical potential, Gibb’s Helmholtz equation, Clausius – Clapeyron equation. Related numerical problems with above topics.

PHASE-RULE - Terminology, Derivation of Gibb’s Phase Rule equation, One component system (water system), Two components systems, system with Eutectic point (Pb-Ag), system with congruent melting point (Zn-Mg), system with incongruent melting point (Na-K), Applications of above systems. Elementary idea of Zone refining and Zone levelling

UNIT-II

WATER AND ITS TREATMENT - Hardness of water and its determination, units of hardness, alkalinity of water and its determination, related numerical problems, water softening, Ion-exchange process, mixed bed demineralisation, desalination of water by using different methods.

CORROSION AND ITS PREVENTION: Galvanic & concentration cell, dry and wet corrosion, Electrochemical theory of corrosion, Galvanic corrosion, Pitting corrosion, differential aeration corrosion, water line corrosion, stress corrosion, factor effecting corrosion, Preventing measures, electroless Plating of Ni and Cu.

UNIT-III

POLYMERS AND POLYMERIZATION: Organic polymers, polymerisation, various types of polymerisation, effect of structure on properties of polymers, preparation, properties and technical applications of thermoplastics (PE, PVC, PVA, Teflon), thermosets (PF, UF & MF) and elastomers (Synthetic Rubber including SBR, Buna-S, Buna-N, Thiokol & Polyurethanes), Inorganic polymers (general properties), Glass transition temperature, silicones

COMPOSITE MATERIALS & THEIR APPLICATION: optical fibres, Fullerenes, organic electronic material, composite materials & their classification, constituents of composites, role of interface in composite performance and durability, fiber-Reinforced composite, advantage and applications of composites.

UNIT-IV

LUBRICANTS AND FUELS: Friction, mechanism of lubrication, classification and properties of lubricants and selection of Lubricants, Definition and classification of fuel, Calorific value and methods of its determination.

Analytical methods: Thermal methods; Principle, method and application of TGA, DTA & DSC, interaction of E.M radiation with a molecule and origin of spectrum, Vibrational & electronic spectra (Experimental details are excluded), spectrophotometry, conductometric titrations, elementary discussion on Flame-photometry.

TEXT/REFERENCE BOOKS:

4. Chemistry in Engineering & Tech., Vol.I & II, Rajaram, Kuriacose (TMH)

5. Engineering Chemistry, Shashi Chawla (DhanpatRai and co.)

7. Engineering chemistry, S.S Dara (S.chand&co.)

Note:

In the semester examination, the Examiners will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit.

UNIT-1
D.C. CIRCUIT ANALYSIS: Basic concepts of electric circuits, Ohm’s Law, Independent energy sources, Dependent energy sources, passive elements, circuit properties, Kirchoff’s laws, applications of Kirchoff’s laws, Nodal and Loop methods of Analysis, Superposition Theorem, Thevenin’s Theorem, Norton’s Theorem, Reciprocity Theorem, Maximum Power Transfer Theorem, Millman’s Theorem, Star-Delta or delta-star transformation, Applications of network theorems P-spice for DC circuit analysis.

UNIT-2

A.C. CIRCUITS: Sinusoidal signal, Phasors, polar & rectangular, exponential & trigonometric representations, Resistance, Inductance & Capacitance components, behavior of these components in A.C. circuits, Phasor relationship for circuit elements, Impedance & Admittance, instantaneous & peak values, average and RMS values, active power, reactive power, apparent power, power factor, complex power, behavior of AC series, parallel circuits, RL, RC & RLC A.C. circuits (series and parallel), Resonance-series and parallel R-L-C Circuits, Q-factor, cut-off frequencies & bandwidth.

UNIT-3

THREE PHASE CIRCUITS: Phase and line voltages and currents, balanced star and delta circuits, power equation, measurement of power by two wattmeter method.

Measuring Instruments: Principle, Construction & working of moving coil type voltmeter & ammeter, moving iron type voltmeter & ammeter, Electrodynamic type wattmeter, single-phase induction type energy meter.

UNIT-4

TEXT BOOKS:
1. Basic Electrical Engg (2nd Edition) : Kothari & Nagarath, TMH
2. Electrical Technology (Vol-I): B.L Theraja & A K Theraja, S.Chand
5. Basic Electrical Engineering, S.N. Singh, PHI

REFERENCE BOOKS:
1. Electrical Engineering Fundamentals: Deltoro, PHI
2. Basic Electrical Engineering (TMH WBUT Series), Abhijit Chakrabarti & Sudipta Nath, TMH
4. Introduction to Electrical Engineering, M.S. Naidu & S, Kamakshaiyah, TMH

Note: In the semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit. All questions will carry equal marks.
AN INTRODUCTION OF COMPUTER SYSTEM: Anatomy of a digital Computer, Different Units of Computer System, Classification of Computer Systems, Radix Number systems. Binary codes: BCD, Gray, EBCDIC, ASCII
INTRODUCTION TO PC OPERATING SYSTEMS: Unix/Linux, DOS, Windows.

UNIT-II

PROGRAMMING LANGUAGES AND ALGORITHMS: Machine, Assembly and High Level Language: Assembler, Linker, Loader, Compiler, Interpreter, debuggers, Programming fundamentals: problem definition, algorithms, flowcharts and their symbols
COMPUTER NETWORKS: Basic concepts of Computer Networks, Working of Internet and its Major features. Network Topologies: Bus, Star, Ring, Hybrid, Tree, Complete, Irregular; Types of Networks: LAN, MAN and WAN.
ELECTRONIC MAIL: advantages and disadvantages, e-mail addresses, message components, message composition, mailer features, E-mail inner workings, E-mail management, Newsgroups, mailing lists, chat rooms.

UNIT-III

BASICS OF ‘C’ LANGUAGE: C Fundamentals, Basic data types, local and external variables and scope, formatted input/ output, expressions, selection statements, loops and their applications; arrays, functions, recursive functions, pointers and arrays. Strings literals, arrays of strings; applications, Structures, Unions and Enumerations.

UNIT-IV

ADVANCED FEATURES OF ‘C’ LANGUAGE: preprocessor directives, macro definition, conditional compilation, storage classes, type’s qualifiers, Low level programming (Bitwise operators, Bit fields in structures, other low level techniques), error handling, file operations(low level/ high level).

BOOKS

1. The C Programming Language by Dennis M Ritchie, Brian W. Kernigham, 1988, PHI.
3. Information technology, Dennis P. Curtin, Kim Foley, Kunal Sen, Cathleen Morin, 1998, TMH
4. Theory and problem of programming with C, Byron C Gottfried, TMH

Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed
BASICS OF ENGINEERING GRAPHICS AND DRAWING – Drawing Papers, Minidrafter, Pencils. Drawing Paper Layout, Title Block, Types of Lines, Lettering, Dimensioning, types of Projections; First and Third Angle systems of Orthographic Projections. Projection of Points in different Quadrants.

PROJECTIONS OF STRAIGHT LINES – Contained by both Reference Planes, Contained by one and inclined to other Reference Plane, Contained by one and Parallel to other Reference Plane, Parallel to both Reference Plane, Perpendicular to one of the Reference Planes, Inclined to one Plane but Parallel to the other Reference Planes, Inclined to both the Reference Planes, True Length of a Line and its Inclination with Reference Planes, Traces of a Line.

UNIT II

PROJECTIONS OF PLANES – Parallel to one Reference Plane, Inclined to one Plane but Perpendicular to the other, Inclined to both Reference Planes.

PROJECTIONS OF POLYHEDRAL SOLIDS AND SOLIDS OF REVOLUTION - in simple positions with axis perpendicular to a Reference Plane, with axis parallel to both Reference Planes, with axis parallel to one Reference Plane and inclined to the other Reference Plane, Projections of sections of Prisms, Pyramids, Cylinders and Cones. True Shape of Sections of Solids.

UNIT III

DEVELOPMENT - Development of Surfaces of various Solids objects.

FREE HAND SKETCHING - Orthographic Views from Isometric, Views of Simple Machine Components such as Brackets, Bearing Blocks, Guiding Blocks and Simple Couplings and Pipe Joints.

UNIT IV

ISOMETRIC PROJECTIONS - Introduction, Isometric Scale, Isometric Views and Drawing of various Plane and Solids objects. Perspective drawing and oblique view.

Orthographic Drawings - Screw Threads, Bolts, Nuts and Washers, Bolted, Riveted and Welded Joints

Text Books:

1. Engineering Drawing: MB Shah and BC Rana, Pearsons

Reference Books:

1. A Text Book of Engineering Drawing: RK Dhawan, S Chand & Company

Note:
1. For class work, the students shall be assigned to prepare at least ten drawing sheets covering all units and each topic of the syllabus.

2. For practical examination, the examiner will set a question paper containing total eight questions, two questions from each unit covering each topic of the syllabus; students are required to attempt five questions at least one from each unit.

**UNIT-I**

**THERMODYNAMICS**- Elementary definitions in thermodynamics, fundamentals of first and 2nd law of thermodynamics- concept of internal energy, enthalpy and entropy, heat pump and refrigerator, elementary numerical problems.

**PROPERTIES OF STEAM & BOILERS**: properties of steam, use of steam tables and mollier diagram, measurement of dryness fraction of steam, Carnot and Rankin cycle, elementary numerical problems. Classification of boilers, Comparison of water and fire tube boilers mounting and accessories with their functions, Constructional and operational details of Cochran and Babcock and Wilcox boilers, elementary numerical problems.

**STEAM TURBINES AND CONDENSERS**: Classification of turbines and their working principles, Types of condensers and their uses.

**UNIT-II**

**REFRIGERATION AND AIR CONDITIONING**- rating of refrigeration machine, coefficient of performance, simple vapor compression cycle, fundamentals of air conditioning, use of Psychrometric charts.

**UNIT-III**

**WATER TURBINES AND PUMPS**: Introduction, Classification, Construction details and working principle of Pelton, Francis and Kaplan turbines, Classification of water pumps and construction detail & working principle of centrifugal pump.

**SIMPLE LIFTING MACHINES**: Definition of machine, Velocity ratio, Mechanical advantage, Efficiency, Laws of machines, Reversibility of machine, Wheel and axle, Differential pulley block, Single, double and triple start worm and worm wheel, Single and double purchase winch crabs, Simple and compound screw jacks, elementary numerical problems.

**UNIT-IV**
INTRODUCTION TO POWER TRANSMISSION AND DEVICES: Belt drive, Rope drive, Chain drive, Types of gear and Gear train, Types and function of clutches, Types and function of brakes.

STRESSES AND STRAINS: Introduction, Concept & types of Stresses and strains, Poison’s ratio, stresses and strains in simple and compound bars under axial loading, Stress-strain diagrams, Hooks law, Elastic constants & their relationships. Concept of shear force and bending moments in beams, elementary numerical problems.

TEXT BOOKS:

LIST OF EXPERIMENTS

1. To find the wavelength of sodium light by using Newton's rings experimental setup.
2. To find the wavelength of sodium light by Fresnel's biprism experimental setup.
3. To find the wavelength of various colours of white light with the help of a plane transmission diffraction grating.
4. To find the refractive index and Cauchy's constants of a prism by using spectrometer.
5. To find the wavelength of sodium light by using Michelson interferometer.
6. To find the resolving power of a telescope.
7. To find the pitch of a screw using He-Ne laser.
8. To find the specific rotation of sugar solution by using a polarimeter.
9. To compare the capacitances of two capacitors by De'sauty bridge.
10. To find the flashing and quenching potentials of Argon and also to find the capacitance of unknown capacitor.
11. To study the photo conducting cell and hence to verify the inverse square law.
12. To find the temperature co-efficient of resistance by using platinum resistance thermometer and Callender and Griffith bridge.
13. To find the frequency of A.C. mains by using sonometer.
14. To find the velocity of ultrasonic waves in non-conducting medium by piezo-electric method.
15. To determine the value of Stefan’s constant.
16. To find the coefficient of thermal conductivity of a good conductor by Searle’s method.
17. To determine the coefficient of thermal conductivity of a bad conductor by Lee and Charlton method.

Note: Students will be required to perform 10 experiments in a semester.

RECOMMENDED BOOKS:
1. Advanced Practical Physics – B.L. Worshnop and H.T. Flint (KPH)

LIST OF EXPERIMENTS / JOBS

1. To study different types of measuring tools/instruments used in metrology and determine least counts of vernier calipers, micrometers and vernier height gauges.

2. To study different types of machine tools (lathe, shaper, planer, slotter, milling, drilling machines).

3. To prepare a job on a lathe involving facing, outside turning, taper turning, step turning, radius making and parting-off.

4. To study different types of fitting tools and marking tools used in fitting practice.

5. To prepare lay out on a metal sheet by making and prepare rectangular tray, pipe shaped components e.g. funnel.

6. To prepare joints for welding suitable for butt welding and lap welding.

7. To study various types of carpentry tools and prepare simple types of at least two wooden joints.

8. To prepare simple engineering components/ shapes by forging.

9. To prepare mold and core assembly, to put metal in the mold and fettle the casting.

10. To prepare horizontal surface/ vertical surface/ curved surface/ slots or V-grooves on a shaper/planner.

11. To prepare a job involving side and face milling on a milling machine.

12. To study of CNC lathe, CNC Milling and EDM Machines.

Note: 1. At least ten experiments/ jobs are to be performed/ prepared by students in the semester.

2. At least 8 experiments/ jobs should be performed / prepared from the above list, remaining two may either be performed/ prepared from the above list or designed and set as per the scope of the syllabus of Manufacturing Processes.

LIST OF EXPERIMENTS

1. Determination of Ca++ and Mg++ hardness of water sample using EDTA solution.
2. Determination of alkalinity of water sample.
3. Determination of dissolved oxygen (DO) in the given water sample.
4. To find the melting and eutectic point for a two component system by using method of cooling curve.
5. Determination of viscosity of lubricant by red wood viscometer (No. 1 & No. 2).
6. To determine Flash point & Fire point of an oil by Pensky-Marten’s flash point apparatus and by Abel’s closed cup apparatus.
7. To prepare Phenol-formaldehyde and urea-formaldehyde resin.
8. To find out saponification No. of an oil.
9. Determination of concentration of KMnO4 solution spectrophotometrically.
10. Determination of strength of HCl solution by titrating it against NaOH solution conductometrically.
11. To determine amount of sodium and potassium in a given water sample by flame photometer.
12. Estimation of total iron in an iron alloy.

Suggested Books:

2. Essential of Experimental Engineering chemistry, Shashi Chawla, Dhanpat Rai Publishing Co.

Note:

1. The student will be required to perform 10 experiments/exercises from the above list and any other two experiments designed by the department based on the theory course (course code 101B Course Name Chemistry).
2. The students will be allowed to use non-programmable scientific calculator. However, sharing/exchange of calculator are prohibited in the examination.
3. Electronic gadgets including Cellular phones are not allowed in the examination.

LIST OF EXPERIMENTS

1. To verify KCL and KVL.
2. To verify Thevenin’s & Norton's Theorems.
3. To verify maximum power transfer theorem in D.C. Circuit.
4. To verify reciprocity theorem.
5. To verify Superposition theorem.
6. To study frequency response of a series R-L-C circuit and determine resonant frequency & Q-factor for various Values of R, L, C.
7. To study frequency response of a parallel R-L-C circuit and determine resonant frequency & Q-factor for various values of R, L, C.
8. To perform direct load test of a transformer and plot efficiency Vs load characteristic.
9. To perform direct load test of a D.C. shunt generator and plot load voltage Vs load current curve.
10. To study various type of meters.
11. Measurement of power by three voltmeters / three ammeters method.
12. Measurement of power in a three phase system by two watt meter method.

Note:
1. At least 10 experiments are to be performed by students in the semester.
2. At least 8 experiments should be performed from the above list; remaining two experiments may either be performed from the above list or designed and set by the Dept. as per the scope of the syllabus of EE101B.

LIST OF PRACTICAL PROBLEMS
1. Write a program to find the largest of three numbers. (if-then-else)
2. Write a program to find the largest number out of ten numbers (for-statement)
3. Write a program to find the average male height & average female heights in the class (input is in form of sex code, height).
4. Write a program to find roots of quadratic equation using functions and switch statements.
5. Write a program using arrays to find the largest and second largest no. out of given 50 nos.
6. Write a program to multiply two matrices.
7. Write a program to sort numbers using the Quicksort Algorithm.
9. Write a program to check that the input string is a palindrome or not.
10. Write a program to read a string and write it in reverse order.
11. Write a program to concatenate two strings.
12. Write a program which manipulates structures (write, read, and update records).
13. Write a program which creates a file and writes into it supplied input.
14. Write a program which manipulates structures into files (write, read, and update records).

Note: At least 5 to 10 more exercises to be given by the teacher concerned
LIST OF EXPERIMENTS

1. To study Cochran & Babcock & Wilcox boilers.

2. To study the working & function of mountings & accessories in boilers.

3. To study 2-Stroke & 4-Stroke diesel engines.

4. To study 2-Stroke & 4-Stroke petrol engines.

5. To calculate the V.R., M.A. & efficiency of single, double & triple start worm & worm wheel.

6. To calculate the V.R., M.A. & efficiency of single & double purchase winch crabs.

7. To draw the SF & BM diagrams of a simply supported beam with concentrated loads.

8. To study the simple & compound screw jacks and find their MA, VR & efficiency.

9. To study the constructional features & working of Pelton Turbine.

10. To prepare stress-strain diagram for mild steel & cast iron specimens under tension and compression respectively on a Universal testing machine.

Note: 1. Total ten experiments are to be performed in the Semester.

2. At least eight experiments should be performed from the above list. Remaining three experiments should be performed as designed & set as per the scope of the syllabus of ME105B: Elements of Mechanical Engineering.

: 75 Marks

: 75 Marks

: 100 Marks

: 3 Hours
UNIT-I
Linear differential equations of second and higher order: Complete solution, complementary function and particular integral, method of variation of parameters to find particular integral, Cauchy's and Legendre's linear equations, simultaneous linear equations with constant coefficients.

UNIT-II
LAPLACE TRANSFORMS AND ITS APPLICATIONS: Laplace transforms of elementary functions, properties of Laplace transforms, existence conditions, transforms of derivatives, transforms of integrals, multiplication by t^n, division by t. Evaluation of integrals by Laplace transforms. Laplace transform of Unit step function, unit impulse function and periodic function. Inverse transforms, convolution theorem, application to linear differential equations and simultaneous linear differential equations with constant coefficients.

UNIT-III

UNIT-IV
FOURIER SERIES AND FOURIER TRANSFORMS: Euler’s formulae, conditions for a Fourier expansion, change of interval, Fourier expansion of odd and even functions, Fourier expansion of square wave, rectangular wave, saw-toothed wave, half and full rectified wave, half range sine and cosine series. Fourier integrals, Fourier transforms, Shifting theorem (both on time and frequency axes), Fourier transforms of derivatives, Fourier transforms of integrals, Convolution theorem, Fourier transform of Dirac-delta function.

TEXT BOOKS:
1. Advanced Engg. Mathematics F Kreyszig

REFERENCE BOOKS:

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.

UNIT-I

ELECTRODYNAMICS & QUANTUM PHYSICS

Introduction, Displacement current, Equation of continuity, Gauss’s Law in dielectric, applications of Gauss’s law, Maxwell’s equations (both differential and integral form), plane e.m. wave equations in free space, dielectric and conducting medium; Poynting vector.

UNIT-II

CRYSTAL STRUCTURE

Space Lattice, unit cell and translation vectors, Miller indices, Bravis lattice structure in 3D, simple crystal structure (NaCl, ZnS and CsCl2), Elementary idea of reciprocal lattice, Ewald Construction, Experimental x-ray diffraction method, Laue method, powder Method.

FREE ELECTRON THEORY

Elements of classical free electron theory, Drude’s Theory of Conduction and its limitations, quantum theory of free electrons, Fermi level, Density of states, Fermi-Dirac distribution function, Thermionic emission, Richardson's equation.

UNIT-III

BAND THEORY OF SOLIDS

Origin of energy bands, Kronig, Penney Model (qualitative), E-K diagrams, Brillouin Zones, Concept of effective mass and holes, Classification of solids into metals, Semiconductors and insulators, Fermi energy and its variation with temperature, Conduction in Intrinsic and Extrinsic Semiconductors. Hall Effect and its Applications.

UNIT-IV

SUPERCONDUCTIVITY & NANOSCIENCE

Introduction to superconductivity, Critical temperature, Meissner Effect, Types of Superconductor, London Equations, penetration depth and coherence length, BCS Theory(qualitative ideas), High temperature superconductors.

Concept of Nano-materials, Size dependence of band gap, Top-down and bottom-up approach for preparing nano-materials, MEMS & NEMS, Properties and applications of Fullerene, Graphene, CNT, Nanowires, Nano-composites, Quantum dots.

TEXT BOOKS :
2. Quantum Mechanics – Ghatak & Loknathan.
6. Engineering Physics by S.P. Taneja (Chand Pub.)

REFERENCE BOOKS:
1. Introduction to Solid State Physics (VII Ed.) - Charles Kittel (John Wiley).
2. Quantum Mechanics – Powell and Crasemann (Oxford & IBH)
3. Classical Electrodynamics by S.P. Puri (Narosa)

Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT I

SEMICONDUCTOR PHYSICS, DIODES AND APPLICATIONS: Basic concepts, intrinsic and extrinsic semiconductors, diffusion and drift currents. Hall effect and its applications-pn junction under open circuit, reverse bias and forward bias conditions, p-n junction in the breakdown region, ideal diode, types of diodes – zener diode, varactor diode, LED and photodiode. Rectifier (half wave and full wave).

AMPLIFIERS: Introduction of different types of BJT amplifiers & their characteristics.

UNIT II

OPERATIONAL AMPLIFIERS: OP-amps, its characteristics, inverting, non-inverting, summing, averaging, scaling, difference, integrator and differentiator amplifiers.

Power Supplies: Introduction and working of switched mode power supply (SMPS), voltage regulator.

UNIT III

DIGITAL ELECTRONICS: Binary, Octal and Hexadecimal number system and conversion, Boolean algebra, truth tables of logic gates AND, OR, NOT, EX-OR, EX-NOR, NAND, NOR AND their implementation using diodes transistors, switches and lamps, Universal gates.

ELECTRONIC INSTRUMENTS: Transducers, Role, importance and applications of general purpose test instruments viz. multi meter (digital and analog), cathode ray oscilloscope (CRO), function/signal generator.

UNIT IV

COMMUNICATION SYSTEM: Modulation, need of modulation, Block diagram of basic communication system, overview of AM, FM and PM.

Reference Books:

Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.

OBJECTIVE
To train students to have proficiency in oral communication through interpersonal communicative situations.

COURSE CONTENT

UNIT I

ESSENTIALS OF SPEAKING SKILLS:
Familiarity with phonetic sound symbols; Transcription of simple words using International Phonetic Alphabet; Use of dictionary to cultivate standard pronunciation and develop phonetic discrimination

UNIT II

SPEAKING SKILLS:
Need and Significance of Effective Oral Communication; Practice of Conversation – Interpersonal and Telephonic Conversation; Formal Group Discussion

UNIT III

NON-VERBAL ELEMENTS IN ORAL COMMUNICATION SKILLS:
Reading Face, eyes, gesture and body posture, time, space and culture in communicative situations; practicing verbal and non-verbal communication (Body Language) to acquire effective Oral communication;

UNIT IV

LISTENING SKILLS:
Essentials of Good Listening, Types of Listening, Barriers in Effective listening, Exercises in Listening to Talk Shows, Speech Reviews; Practice in English Sounds and Speech using RP/MRP

RECOMMENDED READING

- Elements of Biotechnology, P. K. Gupta, Rastogi Publications.

**UNIT - I**

**MATERIALS FOR CONSTRUCTION**: Stones, Sands, Lime, Bricks, Timber, Steel their Classification and Properties. Different Types of Cement and their Properties, manufacturing of Cement, Concrete, and properties of Concrete, Ingredient of Concrete and Their Functions

Component parts of a Building, Foundation, Masonry Works, Doors and Windows, Floors, Roofs, DPC, Building Services

**UNIT - II**

**SURVEYING**: Introduction to Surveying: Definition, importance, classification of surveys, Principle, Leveling: definitions of terms used in leveling, different types of levels, Contours, Definition, representation of reliefs, horizontal equivalent, contour interval, characteristics of contours, methods of contouring, contour gradient, uses of contour maps, Introduction to GIS, GPS and Remote sensing.

**UNIT - III**

**TRANSPORTATION**: Various modes and means of transportation, Different types of transport systems, Importance of road transport, History of Road Development, Indian Road Congress. Main features of 20 years road development plans in India, PMGSY

Sources of power, estimation of water power, water budget equation, necessity and importance of harnessing small hydro power plants, Dams, Types of Dams, Location and Impact assessment of a Dam project.

**UNIT - IV**

**GEOTECHNICAL ENGINEERING**: History and its applications, Soil Properties, Classification of Soil, Geotechnical and Geophysical investigation of Soil.

**IRRIGATION ENGINEERING**: Necessity, advantages, disadvantages, impact of irrigation on human environment, need and development of irrigation in India.

**Text Books:**

1. Basic Civil Engineering, Satheesh Gopi, Pearson.
2. Basic Civil Engineering, Dr. B.C. Punmia, Ashok Kumar Jain, Arun Kr. Jain, Firewall Media

**Reference Books:**

1. Surveying by Prof. N. Singh, Tata McGraw Hill, New Delhi
2. Basic Civil Engineering, Rakesh Beohar, Firewall Media
4. Water Resources Engineering by Linsley and Franzini
Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.

LIST OF EXPERIMENTS

1. To find the low resistance by Carey - Foster's bridge.
2. To find the resistance of a galvanometer by Thomson’s constant deflection method using a post office box.
3. To find the value of high resistances by Substitution method.
4. To find the value of high resistances by Leakage method.
5. To study the characteristics of a solar cell and to find the fill factor.
6. To find the value of $e/m$ for electrons by Helical method.
7. To find the ionisation potential of Argon/Mercury using a thyratron tube.
8. To study the variation of magnetic field with distance and to find the radius of coil by Stewart and Gee's apparatus.
9. To study the characteristics of (Cu-Fe, Cu-Constantan) thermo couple.
10. To find the value of Planck's constant by using a photoelectric cell.
11. To find the value of co-efficient of self-inductance by using a Rayleigh bridge.
12. To find the value of Hall Co-efficient of semi-conductor.
13. To study the V-I characteristics of a p-n diode.
14. To find the band gap of intrinsic semi-conductor using four probe method.
15. To calculate the hysteresis loss by tracing a B-H curve.
16. To verify the Truth Table of various Logic Gates.

Note: Students will be required to perform 10 experiments in a semester.

RECOMMENDED BOOKS:

1. Advanced Practical Physics – B.L. Worshnop and H.T. Flint (KPH)
The purpose of this course is to inculcate a sense of professionalism in a student along with personality development in terms of quality such as receiving, responding, temperament, attitude and outlook. The student efforts will be evaluated on the basis of his/ her performance / achievements in different walks of life.

A Faculty Counselor will be attached to a group of students which will remain associated with him / her during the entire period of the degree program in the University. Each faculty member will serve as a faculty counselor. They will act like a local guardian for the students associated with him / her and will help them in terms of career guidance, personal difficulties.

A.  **The student will present a written report before the committee with following in view:**

The student will present before the committee his/ her achievements during the current academic session in the form of a written report highlighting followings:

1. **Academic Performance**
2. **Extra Curricular Activities / Community Service, Hostel Activities** (8 Marks)
3. **Technical Activities / Industrial, Educational tour** (8 Marks)
4. **Sports/games** (4 Marks)
5. **Moral values & Ethics** (10 Marks)

**NOTE:** Report submitted by the students should be typed on both sides of the paper.

B.  **A student will support his/ her achievement and verbal & communicative skill through presentation before the committee.** (20 Marks)

C.  **Moral values & Ethics**

Syllabus - Introduction to Value Education. Understanding ethics, value system, happiness, prosperity

A minor test / Quiz will be conducted and It will be the duty of the concerned teacher assigned to teach Moral values & Ethics to submit the awards to respective chairman of the department / Director/Principal.

The evaluation of this course will be made by the following Committee.

**University Departments:**

1. Chairperson of the Department Chairman
2. Senior Most Faculty Counselor Member
3. Vice- Chancellor’s Nominee Member

**Affiliated Colleges:**

1. Director/Principal Chairman
2. Head of the Department/Sr. Faculty Member
3. External Examiner to be appointed by the University Member

**Note:** Remuneration will be paid to the external examiner only (at par with the other practical examinations).
Deenbandhu Chhotu Ram University of Science & Technology, Murthal (Sonepat)

12. All the branches are to be divided into group ‘A’ and ‘B’ as per the suitability of the institute/college, so that there is an equitable distribution of teaching load in odd and even semesters.
COURSE OBJECTIVE: The aims of this course are to:

1. Acquaint the student with the basic economic concepts and their operational significance
2. Stimulate him to think systematically and objectively about contemporary economic problems.

UNIT-I

UNIT-II

Meaning of Demand, Individual and Market demand schedule, Law of demand, shape of demand curve. Elasticity of demand, measurement of elasticity of demand, factors effecting elasticity of demand, practical importance & application of the concept of elasticity of demand. Various concepts of cost-Fixed cost, variable cost, average cost, marginal cost, money cost, real cost, opportunity cost. Shape of average cost, marginal cost, total cost etc. in short run and long run.

UNIT III

Meaning of production and factors of production; Law of variable proportions, Law of Return to Scale, Internet and External economics and diseconomies of scale. Meaning of Market, Type of Marker– perfect Competition, Monopoly, Oligopoly, Monopolistic competition (Main features of these markers).

UNIT-IV

TEXT BOOKS:

1. Ahuja H.L”Micro Econometric Theory” S. Chand Publication, New Delhi
2. Dewett K.K “Modern Econometric Theory” S. Chand Publication, New Delhi

SUGGESTED BOOKS:

2. Chopra P.N “Principle of Economics” Kalyani Publishers, Delhi

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.

2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.

Duration of Examination : 3 Hours
UNIT – I
The Multidisciplinary nature of environmental studies, Definition, scope and importance, Need for Public awareness

UNIT – II
NATURAL RESOURCES:
Renewable and non-renewable resources:
Natural resources and associated problems.

a) Forest resources: Use and over-exploitation: deforestation, case studies, Timber exploitation, mining, dams and their effects and forests tribal people.
b) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.
c) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.
d) Food resources: World food problems, changes, caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.
e) Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources; case studies.
f) Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.
  • Role of an individual in conservation of natural resources.
  • Equitable use of resources for sustainable lifestyles.

UNIT- III
ECOSYSTEMS:

- Concept of an ecosystem, Structure and function of an ecosystem, Producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids.
- Introduction, types, characteristic features, structure and function of the following eco-system:
  a) Forest ecosystem, Grassland ecosystem, Desert ecosystem.
  b) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

UNIT- IV
BIODIVERSITY AND ITS CONSERVATIONS:

- Introduction – Definition: Genetic, species and ecosystem diversity.
- Biogeographically classification of India.
- Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.
- Biodiversity at global, National and local levels.
- India as a mega-diversity nation.
- Hot-spots of biodiversity.
- Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.
- Endangered and endemic species of India.

UNIT – V
ENVIRONMENTAL POLLUTION:
Definition, causes, effects and control, measures of:
Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal Pollution, Nuclear hazards
  • Solid waste management: Causes effects and control measures of urban and industrial wastes.
  • Role of an individual in prevention of pollution.
  • Pollution case studies.
  • Disaster management: Floods, earthquake, cyclone and landslides.
UNIT – VI  SOCIAL ISSUES AND THE ENVIRONMENT:

a) From unsustainable to sustainable development
b) Urban problems related to energy
c) Water conservation, rain water harvesting, watershed management
d) Resettlement and rehabilitation of people; its problems and concerns, case studies
e) Environmental ethics: Issues and possible solutions
f) Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, Case studies
g) Wasteland reclamation, Consumerism and waste products
h) Environment Protection Act, Air (Prevention and Control of Pollution) Act, Water (Prevention and Control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act
i) Issues involved in enforcement of environmental legislation, Public awareness

**ME 201B THERMODYNAMICS**

B. Tech. Semester – III (Mechanical Engg & Aeronautical Engg)
UNIT I

BASIC CONCEPTS: Macroscopic and microscopic approaches, definition of system and surrounding, concept of control volume, thermodynamic state, concepts of simple compressible substances, process and cycle, thermodynamic processes and thermodynamic equilibrium; Zeroth law; thermodynamic properties and use of tables of thermodynamic properties; Thermodynamic concept of energy; Modes of work and heat transfer.

FIRST LAW OF THERMODYNAMICS: The first law referred to cyclic and non-cyclic processes, Concept of internal energy of a system, Conservation of energy for simple compressible closed systems; Definitions of enthalpy and specific heats; free expansion process, Conservation of energy for an open system or control volume, Steady and transient processes. Problems

UNIT II

SECOND LAW OF THERMODYNAMICS: The directional constraints on natural processes; Kelvin-Planck and Clausius Statements and their Equivalence; Concept of reversibility; Carnot principle; Absolute thermodynamic temperature scale; Clausius Inequality, entropy, change in entropy in various thermodynamic processes, T-dS relations, entropy balance for closed and open systems, Principle of increase-in-Entropy, entropy generation, Third Law of Thermodynamics. Problems

Energy: Concept of reversible work and irreversibility; Second law efficiency; Energy change of a system: closed and open systems, energy transfer by heat, work and mass, energy destruction, energy balance in closed and open systems. Problems

UNIT III

INTRODUCTION TO PROPERTIES OF MIXTURES AND PHASES: Dalton’s model, Equation of state, properties of ideal gas mixtures, Change in entropy on mixing; Law of corresponding states and introduction to real-gas mixtures; Gibbs phase rule; Air/Water Mixtures, Psychrometrics. Problems

UNIT IV

THERMODYNAMIC PROPERTY RELATIONS: Maxwell relations; Clausius-Clapeyron equation; Difference in heat capacities; Ratio of heat capacities; Joule-Thompson coefficient and inversion curve.

THERMODYNAMICS OF REACTIVE SYSTEMS: First law analysis; Internal energy and enthalpy of reaction; Enthalpy of formation; Second law analysis; chemical equilibrium; equilibrium constant for ideal-gas mixtures and its variation with temperature. Problems

Text Books:
2. Engineering Thermodynamics – Jones and Dugan, PHI, New Delhi.

Reference Books:

Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed

SIMPLE STRESSES & STRAINS: Concept & types of Stresses and strains, Poison’s ratio, stresses and strain in simple and compound bars under axial loading, stress strain diagrams, Hook’s law, elastic constants & their relationships, temperature stress & strain in simple & compound bars under axial loading, Numerical.

COMPOUND STRESSES & STRAINS: Concept of surface and volumetric strains, two dimensional stress system, conjugate shear stress at a point on a plane, principal stresses & strains and principalplanes, Mohr’s circle of stresses, Numerical.

UNIT II

SHEAR FORCE & BENDING MOMENTS: Definitions, SF & BM diagrams for cantilevers, simply supported beams with or without over-hang and calculation of maximum BM & SF and the point of contra-flexure under (i) concentrated loads, (ii) uniformly distributed loads over whole span or a part of it, (iii) combination of concentrated loads and uniformly distributed loads, (iv) uniformly varying loads and (v) application of moments, relation between the rate of loading, the shear force and the bending moments, Problems.

FIXED BEAMS: Deflections, reactions and fixing moments with SF & BM calculations & diagrams for fixed beams under (i) concentrated loads, (ii) uniformly distributed load and (iii) a combination of concentrated loads & uniformly distributed load.

UNIT III

TORSION OF CIRCULAR MEMBERS: Torsion of thin circular tube, Solid and hollow circular shafts, tapered shaft, stepped shaft & composite circular shafts, combined bending and torsion, equivalent torque, effect of end thrust, Numericals.

COLUMNS & STRUTS: Column under axial load, concept of instability and buckling, slenderness ratio, derivation of Euler’s formulae for the elastic buckling load, Eulers, Rankine, Gordon’s formulae Johnson’s empirical formula for axial loading columns and their applications, eccentric compression of a short strut of rectangular & circular sections, Numericals.

UNIT IV

BENDING & SHEAR STRESSES IN BEAMS: Bending stresses in beams with derivation & application to beams of circular, rectangular, I,T and channel sections, composite beams, shear stresses in beams with combined bending, torsion & axial loading of beams. Numericals.

SLOPE & DEFLECTION: Relationship between bending moment, slope & deflection, Mohr’s theorem, moment area method, method of integration, Macaulay’s method, calculations for slope and deflection of (i) cantilevers and (ii) simply supported beams with or without overhang under concentrated load, Uniformly distributed loads or combination of concentrated and uniformly distributed loads, Numericals.

UNIT- I

Review of Basic Force Systems: Dimensions and units of mechanics, idealization of mechanics, laws of mechanics, vector algebra review, moment of a force about a point and axis, the couple and couple moment, addition and subtraction of couples, moment of a couple about a line, translation of a force to a parallel position, resultant of a force system, Problems.

Equilibrium: Introduction, free body diagram, control volumes, general equations of equilibrium, two point equivalent loading, static in-determinacy, simple truss, method of joints, method of sections, Problems.

UNIT-II

Properties of Surfaces & Moments and Products of inertia : First moment of an area and the centroid, principal axes, formal definition of inertia quantities, relation between mass-inertia terms and area-inertia terms, translation of coordinate axes, transportation properties of the inertia terms, a brief introduction to tensors, the inertia of ellipsoid and principal moments of inertia, Problems.

UNIT-III

Kinematics of Particles and Rigid Bodies: Velocity and acceleration in path and cylindrical coordinates, motion of a particle relative to a pair of translating axes, translation and rotation of rigid bodies, Chasles theorem, moving references, velocity and acceleration for different references, inertia and coriolis forces. Problems.

UNIT-IV

TEXT BOOK:

REFERENCE BOOKS:

Note:
1. In the semester examination, the examiner will set two questions from each part (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each part.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.

ME – 207B FLUID MECHANICS

B. Tech. Semester – III (Mechanical Engg. & Aeronautical Engg.)

Class Work : 25 Marks
Examination  : 75 Marks
Total        : 100 Marks
Duration of Examination : 3 Hours
UNIT - I

FLUID PROPERTIES AND FLUID STATICS: Concept of fluid and flow, ideal and real fluids, properties of fluids, Newtonian and non-Newtonian fluids. Pascal’s law, hydrostatic equation, hydrostatic forces on submerged plane and curved surfaces, stability of floating and submerged bodies, metacentric height, relative equilibrium.

MANOMETERS: Simple & differential manometers;

VORTEX MOTION: Free vortex flow, Forced vortex flow

UNIT - II

FLUID KINEMATICS: Eulerian and Lagrangian description of fluid flow; stream, streak and path lines; types of flows, flow rate and continuity equation, differential equation of continuity in cylindrical and polar coordinates, rotation, vorticity and circulation, stream and potential functions, flow net.

FLUID DYNAMICS: Concept of system and control volume, Euler’s equation, Bernoulli’s equation, venturimeter, orifices, orificemeter, mouthpieces, Notches and weirs, kinetic and momentum correction factors, Impulse momentum relationship and its applications.

UNIT - III

VISCOSOUS FLOW: Flow regimes and Reynold’s number, Navier-Stokes equation of motion, Relationship between shear stress and pressure gradient, uni-directional flow between stationary parallel plates, parallel plates having relative motion, movement of piston in a dashpot, power absorbed in bearings.

FLOW THROUGH PIPES: Major and minor losses in pipes, Hagen-Poiseuille law, hydraulic gradient and total energy lines, series and parallel connection of pipes, branched pipes; equivalent pipe, power transmission through pipes.

UNIT IV

BOUNDARY LAYER FLOW: Boundary layer concept, displacement, momentum and energy thickness, von-Karman momentum integral equation, laminar and turbulent boundary layer flows: Boundary layer thickness, skin friction coefficient, drags on a flat plate, boundary layer separation

FLOW AROUND IMMERSED BODIES: Drag force, Lift & drag coefficient, streamlined and bluff bodies, lift and drag on a cylinder and an airfoil.

UNIT I
INTRODUCTION: Pre Wright Brothers era, Wright Flyer, Conventional airplane, progress in airplane design and applications, Current status, Other kinds of heavier than air vehicles, helicopter, VSTOL machines.

SPACE VEHICLES: Missile and its types, space vehicles and its types, reusable space vehicles, space shuttle, satellites, types of satellites and their functions

UNIT II

AERODYNAMICS: Airfoil nomenclature, symmetric & cambered airfoils and their aerodynamic characteristics, angle of attack, 2-D and 3-D wing, wing as a lifting surface, types of wing plan forms and their aerodynamic characteristics, centre of pressure and pressure coefficient, types of drag, lift to drag ratio as efficiency of a lifting surface, different types of flows; laminar and turbulent, effect of viscosity, concept of boundary layer, boundary layer control, high coefficient of lift devices, subsonic, transonic, supersonic and hypersonic mach no., critical mach no., drag divergence mach no.

UNIT III

AIRPLANE PROPULSION: Requirement of power to fly, balance of forces, various means of producing power for forward flight. Piston engines, jet propulsion-thrust equation, turbojet, turbofan, ramjet engines, Locations of such engines, Propeller and its use, Rocket engines.

UNIT IV

AIRPLANE STRUCTURES AND MATERIALS: Structural arrangement of the Wright Flyer,. Structural details of landing gear, wing, fuselage and tail planes, functions of ribs, skin, spars, stringers, longerons, Monocoque and semi-monocoque structures, materials for main components

CONTROL SYSTEMS AND LEVEL FLIGHT: Various types of flaps, function of rudder, elevator, ailerons, flaprons, elevons, types of tail planes, condition for straight & level flight, flight path angle

Duration of Examination : 3 Hours
LIST OF EXPERIMENTS:

1. To study various types of engines used for trainer aircraft.
2. To study Turbojet, Turboprop, Turbofan used in Aeronautical Engineering
3. To study any trainer aircraft and its working.
4. To study high coefficient of lift devices.
5. To study monocoque and semi-monocoque structures
6. To study rudder, elevator, ailerons of the aircraft's control surfaces
7. To study Categorisation of various types of missiles.
8. To study, 2-D and 3-D wing.
9. To study various types of military aircrafts.
10. To study the concept of boundary layer theory.

Note:

1. At least ten experiments are to be performed in the semester.
2. At least eight experiments should be performed from the above list. Remaining two experiments may either be performed from the above list or designed & set by the department as per the scope of the syllabus.

LIST OF EXPERIMENTS:

1. To study the Brinell hardness testing machine & perform the Brinell hardness test.
2. To study the Rockwell hardness testing machine & perform the Rockwell hardness test.
3. To study the Vickers hardness testing machine & perform the Vickers hardness test.
4. To study the Erichsen sheet metal testing machine & perform the Erichsen sheet metal test.
5. To study the Impact testing machine and perform the Impact tests (Izod & Charpy).
6. To study the Universal testing machine and perform the tensile test.
7. To perform compression & bending tests on UTM.
8. To perform the shear test on UTM.
9. To study the torsion testing machine and perform the torsion test.
10. To draw shear Force, Bending Moment Diagrams for a simply Supported Beam under Point and Distributed Loads.

Note:

3. At least ten experiments are to be performed in the semester.
4. At least eight experiments should be performed from the above list. Remaining two experiments may either be performed from the above list or designed & set by the department as per the scope of the syllabus.
LIST OF EXPERIMENTS:

1. To determine coefficient of discharge of an orifice meter.
2. To determine the coefficient of discharge of Notch (V / Rectangular types).
3. To determine the friction factor for the pipes.
4. To determine the coefficient of discharge of venturimeter.
5. To determine the coefficient of discharge, contraction & velocity of an orifice.
6. To verify the Bernoulli's Theorem.
7. To find critical Reynolds number for a pipe flow.
8. To determine the meta-centric height of a floating body.
9. To determine the minor losses due to sudden enlargement, sudden contraction.
10. To determine loss coefficient for valves and bends.
11. To show the velocity and pressure variation with radius in a forced vortex flow.
12. To determine the coefficient of discharge of mouthpiece.

Note:

1. At least ten experiments are to be performed in the semester.
2. At least eight experiments should be performed from the above list. Remaining two experiments may either be performed from the above list or designed & set by the department as per the scope of the syllabus (ME207B).
### GES 203B  ENVIRONMENTAL STUDIES FIELD WORK

**B. Tech. Semester –III/IV (Common for all Branches)**

</tbody>
</table>

**Field Work:**

- Visit to a local area to document environmental assets – river/ forest/ grassland/ hill/ mountain.
- Visit to a local polluted site-Urban/ Rural/ Industrial/ Agricultural.
- Study of common plants, insects, birds.
- Study of simple ecosystems – pond, river, hill slopes, etc. (Field work equal to 5 lectures hours).

**Note:** The awards of this paper shall not be counted in the award of the Degree/DMC.
ME 217 B  WORKSHOP

B. Tech. Semester – III (Common for all branches except BT & AE)

<table>
<thead>
<tr>

</table>

Each student has to undergo a workshop at least 4 weeks (80-100 hours) at the end of II semester during summer vacations. Out of the four weeks, two weeks would be dedicated to general skills and two weeks training for specialized discipline/department. The evaluation of this training shall be carried out in the III semester.

LIST OF JOBS TO BE CARRIED OUT DURING THIS PERIOD

1. To study and prepare different types of jobs on machine tools (lathe, shaper, planer, slotter, milling, drilling machines).
2. To prepare lay out on a metal sheet by making and prepare rectangular tray, pipe shaped components e.g. funnel.
3. To prepare joints for welding suitable for butt welding and lap welding.
4. To study various types of carpentry tools and prepare simple types of wooden joints.
5. To prepare simple engineering components/ shapes by forging.
6. To prepare mold and core assembly, to put metal in the mold and fettle the casting.
7. To study of CNC lathe, CNC Milling and EDM Machines.
8. Any work assigned in electrical workshop, computer hardware/language lab, electronics workshop, biomedical hardware, automobile workshop etc.

This student will prepare job(s)/project as an individual or in a group using workshop in house infrastructure.

The student shall submit a typed report.

Training will be evaluated on the spot out of 20 marks.

The report will be evaluated in the III Semester by a Committee consisting of two teachers.

The student will interact with the committee through presentation to demonstrate his/her learning.

The basis of evaluation will primarily be the knowledge and exposure of students on different kinds of Machines/instruments/tools/skills etc. The committee will evaluate out of 30 marks.

The committee shall submit the awards out of 50 marks.

**Note:**
1. Every student has to participate in the sports activities. Minimum one hour is fixed for sports activities either in the morning or evening. Weightage of Sports is given in General Proficiency & Ethics Syllabus.
2. The Environmental studies (GES-201 B & Environment Studies Field work (GES-203B) are compulsory & qualifying courses only.
3. The students will be allowed to use non-programmable scientific calculator. However, sharing/exchange of calculator is prohibited in the examination.
4. Electronics gadgets including Cellular phones are not allowed in the examination.
5. Each student has to undergo Professional Training of at least 4 weeks from the industry, institute, research lab, training center etc during summer vacation and its evaluation shall be carried out in the V semester.
6. All the branches are to be divided into group ‘A’ and ‘B’ as per the suitability of the institute/college, so that there is an equitable distribution of teaching load in odd and even semesters.
COURSE OBJECTIVE: The aims of this course are to:

1. Acquaint the student with the basic economic concepts and their operational significance
2. Stimulate him to think systematically and objectively about contemporary economic problems.

UNIT-I

UNIT-II

Meaning of Demand, Individual and Market demand schedule, Law of demand, shape of demand curve. Elasticity of demand, measurement of elasticity of demand, factors effecting elasticity of demand, practical importance & application of the concept of elasticity of demand. Various concepts of cost-Fixed cost, variable cost, average cost, marginal cost, money cost, real cost, opportunity cost. Shape of average cost, marginal cost, total cost etc. in short run and long run.

UNIT III

Meaning of production and factors of production; Law of variable proportions, Law of Return to Scale, Internet and External economics and diseconomies of scale. Meaning of Market, Type of Marker– perfect Competition, Monopoly, Oligopoly, Monopolistic competition (Main features of these markers).

UNIT-IV

TEXT BOOKS:

2. Dewett K.K “Modern Economic Theory” S. Chand Publication, New Delhi

SUGGESTED BOOKS:

2. Chopra P.N “Principle of Economics” Kalyani Publishers, Delhi

Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.

2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT – I

The Multidisciplinary nature of environmental studies, Definition, scope and importance.

Need for Public awareness

UNIT – II

NATURAL RESOURCES:

Renewable and non-renewable resources:

Natural resources and associated problems.

g) Forest resources: Use and over-exploitation: deforestation, case studies, Timber exploitation, mining, dams and their effects and forests tribal people.
h) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.
i) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.
j) Food resources: World food problems, changes, caused by agriculture and over-grazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.
k) Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources; case studies.
l) Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

• Role of an individual in conservation of natural resources.
• Equitable use of resources for sustainable lifestyles.

UNIT- III

ECOSYSTEMS:

• Concept of an ecosystem, Structure and function of an ecosystem, Producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids.
• Introduction, types, characteristic features, structure and function of the following eco-system:
  a) Forest ecosystem, Grassland ecosystem, Desert ecosystem.
  b) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

UNIT- IV

BIODIVERSITY AND ITS CONSERVATIONS:

• Introduction – Definition: Genetic, species and ecosystem diversity.
• Biogeographically classification of India.
• Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.
• Biodiversity at global, National and local levels.
• India as a mega-diversity nation.
• Hot-spots of biodiversity.
• Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.
• Endangered and endemic species of India.

UNIT – V

ENVIRONMENTAL POLLUTION:
Definition, causes, effects and control, measures of:

Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal Pollution, Nuclear hazards
- Solid waste management: Causes effects and control measures of urban and industrial wastes.
- Role of an individual in prevention of pollution.
- Pollution case studies.
- Disaster management: Floods, earthquake, cyclone and landslides.

UNIT – VI  SOCIAL ISSUES AND THE ENVIRONMENT:

j) From unsustainable to sustainable development
k) Urban problems related to energy
l) Water conservation, rain water harvesting, watershed management
m) Resettlement and rehabilitation of people; its problems and concerns, case studies
n) Environmental ethics: Issues and possible solutions
o) Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, Case studies
p) Wasteland reclamation, Consumerism and waste products
q) Environment Protection Act, Air (Prevention and Control of Pollution) Act, Water (Prevention and Control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act
r) Issues involved in enforcement of environmental legislation, Public awareness

Case Studies.

UNIT-I

**Introduction:** Function of process planning (Methods). Organizing for process planning - place in production planning and control, Relationship with other departments, Tool engineering.

**Heat Treatment:** Final and intermediary heat treatment operations carried out on aircraft materials (both ferrous and non-ferrous) and the equipment used, the importance of test pieces, Finishing by anodizing.

UNIT-II

**General activities:** carried out in manufacturing and assembly shops, machine shop, sheet metal shop, welding shop, plastic shop and assembly shop.

**Jigs and Fixtures:** Importance of special production tools used in manufacturing activity of various types of jigs and fixtures used in aircraft industry, Difference between jigs and fixtures. Design consideration. Choice of materials, Types of assembly fixtures such as table box, picture-frame, next and so on. Typical jigs for wings, fuselage and control surfaces, jigs and fixtures for turning, milling and drilling, Universal tooling.

UNIT-III

**Cutting Tools:** Theory of metal cutting, typical types of cutting tools used in the manufacturing shops, the advantages of tipped tools. Ceramic tools, tool life, optimum cutting speeds and feeds, factors limiting speeds, feeds and cuts. New development in cutting tools, use of DBN Diamond, ceramics and coating on cutting tools

**Inspection Gauges and Equipment:** Various inspection gauges in the manufacturing shops and their application. Fits, limits and tolerances, engineering reference systems, station and datum lines, chord and fuselage reference lines, lofting aerofoil, use of templates, test equipment used in aircraft production, necessity for and importance of interchangeability media, application of inter-change-ability media viz., acceptance gauges, reference gauges, aperture gauges. Use of digital read out on measuring tools.

UNIT-IV

**Process Planning:** Definition of mass and batch production, various types of charting techniques viz., operation process chart, flow process chart etc., definition of planning breakdown and its importance, factors to be considered for process planning, comparison of methods, simple exercise on process planning - simple machine shop and sheet metal components. Different approaches in process planning during pre-production and production phases.

**Process Shop:** Theory of planting, finishing processes carried on aircraft materials - planting and finishing equipment

Text Books
1. M L Begman. Manufacturing process, Media Promoters
2. ASTME, Tooling for Aircraft and Missile Manufacture

**Reference Books:**

3. Sachs, Sheet Metal Fabrication

**Note:**

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.

2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT I

UNIT II

UNIT III
Furnishing Materials: Plastic, wood, plywood, glue, dopes and rubber used in aircraft manufacture, Methods of testing and storage, Paints, surface finishes and materials. Specifications: Indian Standard, British, American, French, German, and International specifications.

UNIT IV
Corrosion, its detection and prevention, Protective finishes, Testing: Destructive and non-destructive testing techniques. Crack detection, inspection of parts by hot oil and chalk, dye-penetrant, fluorescent and magnetic particles, X-ray, ultrasonic, eddy current and acoustic emission methods.

Text Books:
1. S K Hajra Chowdhary, Materials, Science and Engineering Processes, Media Promoters
2. George E. F. Titterton, Aircraft Materials, English Book Stores, Delhi
3. M L Begman, Manufacturing Processes, Asia Publishing House, Bombay

Reference Books:
1. King and Butler, Principles of Engineering Inspection, Clever Humes Press.
2. C G K Nair, Aircraft Materials, Interline
3. Balram Gupta, Aerospace Materials, S Chand

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.

2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT 1

UNIT II

Airplane Performance in Steady and Level Flight: Equations of motion of aircraft, variation of drag with flight, power required and power available, minimum drag and minimum power conditions, climbing and gliding performance.

UNIT III

Static longitudinal stability: Stick fixed static longitudinal stability, neutral point, power effects, stick free static longitudinal stability. Hinge moments, Aerodynamic Balancing, Static Margin. In flight measurement of stick fixed and stick free neutral points.

Maneuvering flight: Elevator angle per g and stick force per g maneuver margin.

UNIT IV

Text Books:

Reference Books:
1. B Etkins, Dynamics of Flight, John Wiley
2. E L Houghton and N B Caruthers, Aerodynamics for Engineers, Edward Arnold,

Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.

UNIT-I
Basics of the application and identification of electrical cables used in Aircraft radio installation, crimping and soldering techniques, bonding continuity and insulation tests. Composition, performance (stability and tolerance) and limitations of the fixed resistors and varistors (carbon composition, carbon film, wire wound and metallic film).

UNIT-II
AC and DC measuring instruments: Electrical power distribution systems, the operation and construction of static inverters, rotary inverters and transformer rectifier units. Basics of interference caused by electrical and ignition system to radio apparatus, methods of minimizing or suppressing such interference, bonding and screening.

UNIT-III
Construction and Identification of various types of antennas; the voltage and current distribution along antenna of various length; characteristics of ground planes. Very high frequency (VHF) and high frequency (HF) airborne communications; frequency bands allocation; the methods of propagation and the ranges expected, both day and night; calculation of approximate range of communication (line of sight) with given data.

</table>

UNIT-I
Measurement of circuit Units and Standards, theory of measurement, functional analysis of measurements, errors and error estimation, Measurement of voltage and current in DC and AC, VTVM digital voltmeter, measurement of power, phase angle, power factor, Extension of range by instrument transformers, fluxmeter, measurement of frequency, heterodyne techniques and digital frequency counters, signal generators

UNIT-II
LCR direct and bridge methods, Waveform analysis, Cathode ray oscilloscopes, measurement of harmonic and Intermodulation distortion, distortion analyser, spectrum lanalyser, configurations and performance characteristics of instruments, motion requirement, relative displacement and velocity, Translational and sesmic displacement, velocity and acceleration measurements, Torque measurement and rotating shaft, pressure and flow measurements, temperature based on expansion, electric resistance and radiation methods, Problems involved in temperature measurements, compensation techniques.

UNIT-III
Electrostatic Sensitive Devices, Electromagnetic Environment Requirements for airborne equipment, sensors for the measurement of altitude, air speed, acceleration, temperature, fuel flow and quantity. Instrument displays, panels and cockpit layout, flight instruments, gyroscopic instruments, power plant instruments, navigation instruments.

UNIT-IV

Text Books
2. E H J Pallet, Automatic Flight Control, Blackwell

Reference Books:
2. C.A. Williams: Aircraft Instruments, Galgotia
3. Civil, Aircraft Inspection Procedures (CAP459) Two Volumes, Himalayan Books. 34
Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.

LIST OF EXPERIMENTS:

1. Charging and discharging of batteries.
2. VTVM digital voltmeter.
3. Load test on dc generator
4. Synchronization of two generators.
5. Study of rectifier.
6. Measurement of power using ammeter, voltmeter method
8. Study of cables and relays.
9. Measurement of power using instrument transformer
10. Study of oscilloscope
11. Study of starters

NOTE:

1. At least ten experiments have to be performed in the semester.
2. At least seven experiments should be performed from above list. Remaining three experiments may either be performed from the above list or designed & set by the concerned institution as per the scope of the syllabus of AER-308B
LIST OF EXPERIMENTS:

1. To make a pattern for a given casting with all the necessary allowances, parting line, running system details. Prepare the mold and make the casting. Investigate the casting defects and suggest the remedial measures.

2. To make a component involving horizontal and vertical position welding and study the welding defects and suggests their remedies.

3. To prepare a job on surface grinder/cylindrical grinder and measure the various parameters of the finished piece.

4. To cut external threads on a lathe.

5. Manufacture and assembly of a unit consisting of 2 to 3 components to have the concept of tolerances and fits (shaft and bush assembly or shaft, key and bush assembly or any suitable assembly).

6. Leveling of machine tools and testing their accuracy.

7. Disassembly and assembly of small assemblies such as tail stock, bench vice, screw jack etc.

8. Development and manufacture of complex sheet-metal components such as funnel etc.

9. Multi slot cutting on milling machine by indexing.

10. Drilling and boring of a bush.

Note:

1. At least ten experiments are to be performed in the semester.

2. At least eight experiments should be performed from the above list. Remaining two experiments may either be performed from the above list or designed & set by the department as per the scope of the syllabus (ME 202B).

FIELD WORK:

a. Visit to a local area to document environmental assets – river/ forest/ grassland/ hill/ mountain.

b. Visit to a local polluted site-Urban/ Rural/ Industrial/ Agricultural.

c. Study of common plants, insects, birds.

d. Study of simple ecosystems – pond, river, hill slopes, etc. (Field work equal to 5 lectures hours).

Note: The awards of this paper shall not be counted in the award of the Degree/DMC.

The purpose of this course is to inculcate a sense of professionalism in a student along with personality development in terms of quality such as receiving, responding, temperament, attitude and outlook. The student efforts will be evaluated on the basis of his/ her performance / achievements in different walks of life.

A Faculty Counselor will be attached to a group of students which will remain associated with him /her during the entire period of the degree program in the University. Each faculty member will serve as a faculty counselor. They will act like a local guardian for the students associated with him /her and will help them in terms of career guidance, personal difficulties.

A. The student will present a written report before the committee with following in view:

The student will present before the committee his/her achievements during the current academic session in the form of a written report highlighting followings:

I. Academic Performance

II. Extra Curricular Activities / Community Service, Hostel Activities (8 Marks)

III Technical Activities / Industrial, Educational tour (8 Marks)

IV Sports/games (14 Marks)

V Moral values & Ethics (15 Marks)

NOTE: Report submitted by the students should be typed on both sides of the paper.
C. A student will support his/her achievement and verbal & communicative skill through presentation before the committee. (30 Marks)

C. Moral values & Ethics

Syllabus - Process for Value Education, self-evaluation concept and process.
A minor test will be conducted during the semester and it will be the duty of the concerned teacher assigned to teach Moral values & Ethics to submit the awards to respective chairman of the department / Director/Principal.

The evaluation of this course will be made by the following Committee.

**University Departments:**
1. Chairperson of the Department  
2. Senior Most Faculty Counselor  
3. Vice-Chancellor’s Nominee

**Affiliated Colleges:**
1. Director/Principal  
2. Head of the Department/Sr. Faculty  
3. External Examiner to be appointed by the University

**Note:** Remuneration will be paid to the external examiner only (at par with the other practical examinations).

Duration of Examination : 3 Hours

UNIT-I

**Aircraft Piston Engines**: The internal combustion engine process, brief historical sketch, spark ignition and compression ignition, (SI and CI) engines, 4-stroke and 2-stroke engines. Combustion processes various types of arrangements for multi cylinder aircraft engines. Intake and Exhaust manifolds. IHP, BHP and SHP Engine performance, Effect of altitude and speed, power required and power available. Super charging, types of super chargers.

UNIT-II

UNIT-III

UNIT-IV

**Aircraft Gas Turbine Engine**: Compressor and Turbine work, compressor and turbine efficiencies, general layout, gas flow diagram. Engine intake and Exhaust nozzles, After burner arrangements for thrust augmentation.

**Gas Turbine Systems and Components**: Fuel system components, various types of fuel systems, lubricating oils and lubricating systems. Secondary air systems, arrangements of bleeding of compressor air for aircraft pressurization and oxygen systems. Engine starting systems.

**Compressors**: centrifugal and axial types of compressors, Materials of Construction.

**Combustion chambers**: Various arrangements, simplex and Duplex type of Burners. Materials for combustion chambers

**Text Books:**

**Reference Books:**

**Note:**

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT-I

Introduction: Helicopter as an aircraft, Basic features, Layout, Generation of lift, Main rotor, Gearbox, tail rotor, power plant, drive to main and tail rotor, considerations on blade, flapping and feathering, Rotor controls various types of rotor, Geometry of the rotor, Blade loading, Effect of solidity, profile drag, compressibility etc., Blade area required, number of Blades, Blade form, Power losses, Rotor efficiency.

UNIT-II

Aerodynamics of Rotor Blade: Aerofoil characteristics in forward flight, Hovering and Vortex ring state, Blade stall, maximum lift of the helicopter calculation of Induced Power, High speed limitations; parasite drag, power loading, ground effect.

Power Units and Flight Performance: Piston engines, Gas turbines, Ramjet principle, Comparative performance, Horsepower required, Range and Endurance, Rate of Climb, Best Climbing speed, Ceiling in vertical climb, Autorotation.

UNIT-III

UNIT-IV

Rotor Vibrations: Dynamic model of the rotor, Motion of the rigid blades, flapping motion, lagging motion, feathering motion, Properties of vibrating system, phenomenon of vibration, fuselage response, vibration absorbers, Measurement of vibration in flight.

Text Books:
2. Lalit Gupta, Helicopter Engineering; Himalayan Books New Delhi 1996

Reference Books:
4. R W Prouty, Helicopter Aerodynamics

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT-I
V-n diagram for the loads acting on the aircraft, salient features of the V-n diagram, Flight envelope for different flying conditions.
Analysis of statically indeterminate structures: planar and space trusses; Deflection of Beams; Area moment Method, slope-deflection method, moment distribution method, Basic elasticity, stresses and strains, equations of equilibrium, plane stress and plane strain problems, compatibility equations, stress-strain relations.

UNIT-II
Strain energy and complementary energy, total potential energy; principle of virtual work; principle of the stationary value of the total potential energy and total complementary energy. Application to deflection problems, application to statically indeterminate problems, Rayleigh Ritz and Galerkin techniques.

UNIT-III
Bending of open and closed section thin walled beams, shear of open section and closed section beams, shear centre and centre of twist, Torsion of closed and open section beams, membrane analogy. Deflection of open and close section beams.
Aircraft materials-properties of flight vehicle materials importance of strength to weight ratio, temperature variations, factors affecting choice of materials for different part of airplane

UNIT-IV
Light metal alloys: heat treatment, high temperature and corrosion resistant alloys, Aircraft steels, effect of alloying elements, heat treatment, selection of steel for aircraft application composite materials: classification and characteristics of composite materials, strength to weight comparison with metals, fiber reinforced and particulate composites.

Text Books:
1. T H G Megson, Aircraft Structures for Engineering Students, Edward Arnold, U.K.
3. E F Bruhn, Analysis and Design of Flight Vehicle Structures, Tri State offset Co. USA

UNIT -I

Conformal Transformation: Complex potential function, Blasius theorem, principles of conformal transformation, Kutta - Juokowaski transformation of a circle into flat plate, airfoils & ellipses.

Incompressible Flow Over Airfoils: Glauert’s thin airfoil theory, symmetrical airfoil, cambered airfoil, flapped airfoil, determination of mean camber line shapes for uniform & linear distribution of circulation. Description of flow about multi-element airfoils.

UNIT-II

Incompressible Flow Over Finite Wings: Downwash & induced drag, Biot-Savart’s law and Helmholtz’s theorem, Prandtl’s classical lifting line theory, fundamental equations. Elliptic and general lift distribution over finite unswept wings, effect of aspect ratio, Drag polar ,Correlation of Cl distribution over other aspect ratios, Lifting Surface theory, Formation Flying, Ground effect.

UNIT-III

Delta Wing Aerodynamics: Polhamus theory, leading edge suction analogy, calculations of lift coefficient, flow field, aspect ratio effect, leading edge extension, HAA aerodynamics

Shock Waves: Introduction and problems related to Normal Shock waves Oblique Sock waves Expansion waves Lift and drag in supersonic flows

UNIT-IV

Text Books:
2. Elements of Gas Dynamics : Lieppmann and Rosheko ,John Wiley 1957

Reference Books:
2. Modern compressible Flow with historical perspective: John D. Anderson

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT I

AIR STANDARD CYCLES: Internal and external combustion engines; classification of I.C. Engines, Cycles of operation in four stroke and two stroke I.C. Engines, Wankel Engines, Assumptions made in air standard cycle; Otto cycle; diesel cycle, dual combustion cycle, comparison of Otto, diesel and dual combustion cycles; sterling and Ericsson cycles; air standard efficiency, specific work output, specific weight; work ratio; mean effective pressure; deviation of actual engine cycle from ideal cycle. Problems.

CARBURETION, FUEL INJECTION AND IGNITION SYSTEMS: Mixture requirements for various operating conditions in S.I. Engines; elementary carburetor, Requirements of a diesel injection system; types of injection systems; petrol injection, Requirements of ignition system; types of ignition systems, ignition timing; spark plugs, Problems.

UNIT II

COMBUSTION IN I.C. ENGINES: S.I. engines; Ignition limits; stages of combustion in S.I. Engines; Ignition lag: velocity of flame propagation; detonation; effects of engine variables on detonation; theories of detonation; octane rating of fuels; pre-ignition; S.I. engine combustion chambers, Stages of combustion in C.I. Engines; delay period; variables affecting delay period; knock in C.I. engines, Cetane rating; C.I. engine combustion chambers.

LUBRICATION AND COOLING SYSTEMS: Functions of a lubricating system, Types of lubrication system; mist, wet sump and dry sump systems; properties of lubricating oil; SAE rating of lubricants, engine performance and lubrication. Necessity of engine cooling; disadvantages of overcooling; cooling systems; air-cooling, water cooling; radiators.

UNIT III

ENGINE TESTING AND PERFORMANCE: Performance parameters: BHP, IHP, mechanical efficiency, brake mean effective pressure and indicative mean effective pressure, torque, volumetric efficiency; specific fuel consumption (BSFC, ISFC), thermal efficiency; heat balance; Basic engine measurements; fuel and air consumption, brake power, indicated power and friction power, heat lost to coolant and exhaust gases; performance curves. Problems.

AIR POLLUTION FROM I.C. ENGINES AND ITS REMEDIES: Pollutants from S.I. and C.I. Engines, Methods of emission control; alternative fuels for I.C. Engines; the current scenario on the pollution front.

UNIT IV

ROTARY COMPRESSORS: Root and vane blowers; Static and total head values; Centrifugal compressors- Velocity diagrams, slip factor, ratio of compression, pressure coefficient, pre-whirl; Axial flow compressor- Degree of reaction, polytropic efficiency, surging, choking and stalling, performance characteristics. Problems.
**GAS TURBINES**: Brayton cycle; Components of a gas turbine plant; open and closed types of gas turbine plants; Optimum pressure ratio; Improvements of the basic gas turbine cycle; multi stage compression with inter-cooling; multi stage expansion with reheating between stages; exhaust gas heat exchanger, Applications of gas turbines. Problems.

**TEXT BOOKS:**

3. Engineering fundamental of the I.C.Engines – Willard W. Pulkrabek Pub.-PHI, India

**REFERENCE BOOKS:**

**Note:**

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT-I

Preliminaries: Aircraft Design Requirements, specifications, role of users, Aerodynamic and Structural Consideration, Importance of weight, Airworthiness requirements and standards, Classifications of airplanes, Special features of modern airplane.

Air Loads in Flight: Symmetrical measuring loads in flight, Basic flight loading conditions, Load factor, Velocity - Load factor diagram, gust load and its estimation, Structural limits.

Airplane Weight Estimation: Weight estimation based on type of airplane, trends in wing loading, weight-estimation based on mission requirements, iterative approach

UNIT-II

Structural Design: Cockpit and aircraft passenger cabin layout for different categories, types of associated structure, features of light airplanes using advanced composite materials. Structural aspects of design of airplane, Bending moment and shear force diagram. Design principles of all metal stressed skin wing for civil and military applications

UNIT-III

Landing Gears: Different kinds of landing gears, and associated arrangement for civil and military airplanes. Preliminary calculations for locating main and nose landing gears.

UNIT-IV

Introduction to advanced concepts: Supercritical Wings, relaxed static Stability, controlled configured vehicles, V/STOL aircraft and, rotary wing vehicles. Design and layout of flying controls and engine controls

Text Books:
2. D Stinton, The Design of Airplane, GRANADA, UK 1983

Reference Books:
1. E Torenbeek, Synthesis of Airplane Design
2. L M Nicholai, Fundamentals of airplane Design, Univ. of Dayton DHIO, 1975

Note:

**List of experiments**

1. Study the construction of fuselage and identify the primary load carrying members
2. Study the construction of wings, ailerons, flaps, slits, slats and spoilers.
3. Study the construction of empennage, stabilizers, rudders adjusting tabs etc with detail of honeycomb structure.
4. Study the construction of landing gears and wheel turning mechanism
5. Study of aileron control linkages including artificial feel mechanism, booster and manual controls and their adjustments
6. Study the measurement techniques with strain gauges
7. Study checks on airframe for life extension
8. Dye penetrant testing for surface crack detection
9. Measurement of deflection of truss using DTI
10. Measurement of deflection of simply supported beam
11. Determination of compressive strength of thin plates

**NOTE**

1. At least ten experiments are to be performed in the semester

**LIST OF EXPERIMENTS:**

1. To study the constructional details & working principles of two-stroke/ four stroke petrol engine.
2. To study the constructional detail & working of two-stroke/ four stroke diesel engine.
3. Analysis of exhaust gases from single cylinder/ multi cylinder diesel/ petrol engine by Orsat Apparatus.
4. To prepare heat balance sheet on multi-cylinder diesel engine/petrol engine.
5. To find the indicated horse power (IHP ) on multi-cylinder petrol engine/diesel engine by Morse Test.
6. To prepare variable speed performance test of a multi-cylinder/single cylinder petrol engine/ diesel engine and prepare the curves (i) bhp, ihp,fhp, vs speed ( ii) volumetric efficiency & indicated specific fuel consumption vs speed.
7. To find fhp of a multi-cylinder diesel engine/ petrol engine by Willian’s line method & by motoring method.
8. To perform constant speed performance test on a single cylinder/ multi-cylinder diesel engine & draw curves of (i) bhp vs fuel rate, air rate and A/F and (ii) bhp vs mep, mech efficiency & sfc.
9. To measure CO & Hydrocarbons in the exhaust of 2- stroke / 4-stroke petrol engine.
10. To find intensity of smoke from a single cylinder / multi-cylinder diesel engine.
11. To draw the scavenging characteristic curves of single cylinder petrol engine.
12. To study the effects of secondary air flow on bhp, sfc, Mech. Efficiency & emission of a two-stroke petrol engine.

**Note:**

1. At least Ten experiments are to be performed in the Semester.
2. At least eight experiments should be performed from the above list. Remaining two experiments may either be performed from the above list or as designed & set by the department as per the scope of the syllabus (ME307B)

At the end of 4th semester each student would undergo four weeks Professional Training in an Industry/ Institute/ Professional Organization/ Research Laboratory etc. with the prior approval of the Training and Placement Officer of the University and submit in the department a typed report along with a certificate from the organization.

The typed report should be in a prescribed format.

The report will be evaluated in the V Semester by a Committee consisting of three teachers from different specialization to be constituted by the Chairperson of the department. The basis of evaluation will primarily be the knowledge and exposure of the student towards different processes and the functioning of the organization.

The student will interact with the committee through presentation to demonstrate his/her learning.

Teachers associated with evaluation work will be assigned 2 periods per week load.

**Total** 25 L 4 T 7 P 235 Theory 165 Practical 900 33.5

**Note:**
5 Every student has to participate in the sports activities. Minimum one hour is fixed for sports activities either in the morning or evening. Weightage of Sports is given in General Proficiency & Ethics Syllabus.
6 The students will be allowed to use non-programmable scientific calculator. However, sharing/exchange of calculator is prohibited in the examination.
7 Electronics gadgets including Cellular phones are not allowed in the examination.
8 Each student has to undergo Professional Training of at least 4 weeks from the industry, institute, research lab, training center etc during summer vacation and its evaluation shall be carries out in the VII semester.
UNIT-I

Steady 1-D Gas Dynamics: Basics, Simple flows; Nozzle flow, nozzle design, nozzle operating characteristics for isentropic flow, nozzle flow and shock waves, Nozzle characteristics of some operational Engines, Rayleigh flow and Fanno flow. Inlet: design, sizing and performance for various flow regimes

Nozzle: C-D Nozzle performance - Effects of back pressure, exit area ratio and mass flow

UNIT-II

Parametric Cycle Analysis of Ideal Engines: Engine cycle analysis and basic assumptions. Applications to (i) Ramjet, (ii) Turbojet with and without after burner, (iii) Turbo fan Engine, optimum by pass ratio (iv) Turbo-Prop Engine Cycle analysis of real engines:

UNIT-III

UNIT-IV

Axial Flow Turbine: Introduction to turbine analysis, mean-radius stage calculations, Stage parameters, stage loading and flow coefficients, degree of reaction, Stage temperature ratio and pressure ratio, Blade spacing, Radial Variation, Velocity ratio. Axial Flow Turbine stage Flow path dimension, stage analysis, Multistage design steps of design - single stage and two-stage. Turbine Performance, Blade Cooling.

Text Books:
2. H Cohen, G F C Rogers and H I H Sarvanmutto, Gas Turbine Theory, John Wiely

Reference Books:
Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.

2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT-I

Wind Tunnel as a Tool: Types of wind tunnels, special purpose wind tunnels

Wind Tunnel Design: Test section, diffuser, fan section, fan design, return passage, cooling, the breather- vibration, test section flow quality, diffuser design, wind tunnel construction, energy ratio, final form.

UNIT-II

Instrumentation and Calibration of Test Section: Measurement of pressure, velocity, turbulence, flow angularity, hot wire anemometry, laser velocimeter, data acquisition, flow visualization techniques, wind tunnel calibration.

Model Forces, Moment and Pressure Measurement: Wind tunnel balances- Internal & External balances design of wind tunnel balances, Wake survey method.

UNIT-III

Wind Tunnel Correction: Method of Images, boundary corrections, buoyancy corrections, wake blockage, solid blockage- (2D & 3D corrections).

UNIT-IV

Non Aeronautical Uses of the Wind Tunnel

Applications in wind engineering, Surface vehicle testing, testing of buildings for wind forces, pollution, other applications at low Reynolds numbers.

Text Book:

References Book:
1. Measurement of Airflow - Pankhurst and Ower, Pergamon Press

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT – I

INTRODUCTION: Definition and brief history of industrial engineering, objectives and relevance of industrial engineering for achieving excellence in industry, decisions in industrial engineering.

PRODUCTION SYSTEM AND PRODUCTIVITY: Value addition, products and services, conversion process, production system, types of production system, productivity and its measurement, factors effecting productivity and strategies for improving productivity.

WORKFORCE MANAGEMENT: Teams, employee empowerment, quality circles, incentive plans, job design, job specialization, job enlargement, job rotation, job enrichment.

WORK STUDY: Method study, Principles of motion economy, Techniques of method study- various charts, therbligs, Work measurement- various methods, time study, PMTS, determining time, work sampling, numericals.

UNIT II

MANUFACTURING COST ANALYSIS: Elements of cost, overheads estimation types of costs. Cost variance analysis, Fixed and variable costs, Break even analysis, numericals.

MATERIALS MANAGEMENT: Strategic importance of materials in industries, pressure for high and low inventory, relevant costs, basic inventory control models- EOQ, EBQ with and without shortage, purchase discounts, sensitivity analysis, inventory control systems- P, Q, Ss systems, service level, stockout risk, determination of order point and safety stock, selective inventory control-ABC, FSN, SDE, VED., numericals.

UNIT III

PRODUCTION PLANNING AND CONTROL (PPC): Introduction to forecasting- Simple and weighted moving average methods, objectives and variables of PPC, Aggregate planning- basic concept and its relation with other decision areas, Master Production Schedule, Scheduling operations, various methods for line and intermittent production systems, Gantt chart, Sequencing-Johnson algorithm for n jobs and 2 machines, n jobs & 3 machines, 2 jobs & n machines, n jobs & m machines, Various means of measuring effectiveness of PPC, numericals.

UNIT IV

Product Design and Development: Varios approaches, Product life cycle, Role of 3S’s – Standardization, Simplification, Specialization, Introduction to value engineering, role of ergonomics in product design.

Manufacturing Strategies: Introduction to JIT, TPM, fundamental of quality & TQM, Kaizen-elements, benefits and implementation aspects. Overview of Supply Chain Management, Management Information system (MIS) and its role in decision making.
**Text Books**

1. Production and Operations Management by Chary- TMH
2. Industrial Engineering and Management by O.P. Khanna- Dhanpat Rai Publications

**Reference Books:**

1. Modern Production Management- S.S. Buffa- John Wiley
2. Operations Management for competitive advantage by Chase-Jacob-Aquilino- TMH

**Note:**

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT-I
Bending of thin plates; pure bending, plate subjected to bending and twisting, plates subjected to distributed load, combined bending and in-plane loading of a thin rectangular plate, energy method for bending of thin plates.

UNIT-II

STRUCTURAL STABILITY: Euler buckling of columns: inelastic stability of columns, effect of initial imperfections, energy method for the calculation of buckling loads in columns, flexural and torsional buckling of the thin walled columns, buckling of stiffened plates, local instability.

UNIT-III

Stress analysis of aircraft components: tapered beams, fuselages, wings, fuselage frames, wing ribs, shear lag.
Matrix methods of structural analysis: stiffness matrix for an elastic springs, pin jointed frame work, application to statically indeterminate frame works, matrix analysis of space frames, stiffness matrix for a beam. Concept and introduction to finite element methods.

UNIT-IV
Introduction to vibration: Free and forced vibration of single, two and multiple degrees of freedom systems, Principal modes, normal modes, static coupling and dynamic coupling.

Text Books:
1. T H G Megson, Aircraft Structures for Engineering Students, Edward Arnold, U.K.

Reference Books:
1. W T Thomson, Vibration Theory and Application

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT-I

Importance of NDT in quality assurance. Different types of non destructive techniques to obtain information regarding size, location and orientation of damage or cracks. Visual inspection techniques coin tapping technique for composite structures and adhesive bonds.

UNIT-II

Ultrasonic testing: Pulse echo technique, pitch-catch technique, through transmission technique, A-scan, B-Scan, C-scan. Acoustic emission: Sources of acoustic emission in composites, peak amplitude, rise time during events, ring-down counts duration of events.

UNIT-III

X-ray radiography: Absorption spectra, short wave length, X-ray for detection of voids. Die penetration technique, Magnetic particle testing

UNIT-IV

In each of the above techniques, (i) theory and basic principles, (ii) advantages/disadvantages, (ii) material of parts that can be inspected, (iv) physical size and shape limitation, (v) economics of process, (vi) types of defects that can be detected, (vii) environment limitation are to be discussed alongwith equipment used for each of the techniques.

UNIT I

BASICS CONCEPTS: Thermodynamics Vs Heat transfer, Define Heat Transfer, thermal conductivity Vs diffusivity, basic modes of heat transfer, Combined heat transfer.

STEADY STATE HEAT CONDUCTION: Introduction, 1-D heat conduction through a plane wall, long hollow cylinder, hollow sphere, Conduction equation in Cartesian, polar and spherical coordinate systems, Numericals.

UNIT II

STEADY STATE CONDUCTION WITH HEAT GENERATION: Introduction, 1-D heat conduction with heat sources, Extended surfaces (fins)- Fins with uniform cross-sectional area, Fin effectiveness, Brief introduction of 2-D heat conduction, Numericals.

TRANSIENT HEAT CONDUCTION (1-D): Lumped capacitance, semi-infinite and infinite solid conduction modes for walls, cylinders, spheres; Chart solution, Relaxation Method, Numericals.

UNIT III

CONVECTION: Forced convection-Thermal and hydro-dynamic boundary layers, Equation of continuity, Momentum and Energy equations, Internal flow through circular tube and external flow over a flat plate, Fluid friction and heat transfer (Colburn analogy), Free convection from a vertical flat plate, Empirical relations for free convection from vertical and horizontal planes & cylinders, Numericals.

THERMAL RADIATION: Basic laws, Black body radiation, intensity and emissive power, diffuse and gray surfaces, Shape factors and network analogy, Radiation shields, applications to two and three surface enclosures, introduction to participating media, Numericals.

UNIT IV

HEAT EXCHANGERS: Classification, Performance variables, Analysis of a parallel/ counter flow heat exchanger, Heat exchanger effectiveness, pressure drop, Numericals.

HEAT TRANSFER WITH CHANGE OF PHASE: Laminar film condensation on a vertical plate, Drop-wise condensation, Pool boiling regimes, Nucleate boiling and critical heat flux, film boiling and minimum heat flux, Flow boiling.

**List of Experiments:**
1. Study the constructional details of axial flow compressor
2. Study the constructional details of centrifugal compressor
3. Study of accessory gear box and its construction
4. Study the constructional details of main fuel pump
5. Study the constructional details of combustion chamber
6. Study the constructional details of after burning system
7. Study the constructional details of piston engines
8. Study the functioning of complete jet engine
9. Study the constructional details of propellers

**NOTE**
1. At least eight experiments are to be performed in the semester
2. At least six experiments are to be performed from above list. Remaining two experiments may either be performed from above list or designed and set by concerned institute as per the scope of the syllabus
3. Students will be taken to HAL/ Air Force Station to witness Aero-engine run on test bed
ME-316B       HEAT TRANSFER LAB

LIST OF EXPERIMENTS:

1. To determine the thermal conductivity of a metallic rod.
2. To determine the thermal conductivity of an insulating power.
3. To determine the thermal conductivity of a solid by the guarded hot plate method.
4. To find the effectiveness of a pin fin in a rectangular duct natural convective condition and plot temperature distribution along its length.
5. To find the effectiveness of a pin fin in a rectangular duct under forced convective and plot temperature distribution along its length.
6. To determine the surface heat transfer coefficient for a heated vertical tube under natural convection and plot the variation of local heat transfer coefficient along the length of the tube. Also compare the results with those of the correlation.
7. To determine average heat transfer coefficient for a externally heated horizontal pipe under forced convection & plot Reynolds and Nusselt numbers along the length of pipe. Also compare the results with those of the correlations.
8. To measure the emissivity of the gray body (plate) at different temperature and plot the variation of emissivity with surface temperature.
9. To find overall heat transfer coefficient and effectiveness of a heat exchange under parallel and counter flow conditions. Also plot the temperature distribution in both the cases along the length of heat of heat exchanger.
10. To verify the Stefan-Boltzmann constant for thermal radiation.
11. To demonstrate the super thermal conducting heat pipe and compare its working with that of the best conductor i.e. copper pipe. Also plot temperature variation along the length with time or three pipes.
12. To determine the critical heat flux using two phase heat transfer apparatus.
13. To determine the water side overall heat transfer coefficient on a U-tube heat exchanger.
14. Design of Heat exchanger using CAD and verification using thermal analysis package eg. ANSYS software etc.

Note:  
1. Ten experiments are to be performed in the Semester. 
2. At least seven experiments should be performed from the above list. Remaining three experiments should be performed as designed & set by the department as per the scope of the syllabus (ME306B).
OBJECTIVE

The course aims at developing competence for report writing with a focus on its complex writing techniques and procedures.

COURSE CONTENT

UNIT I

Report Writing

Reports: meaning, their importance and types, Structure of reports, Formats of reports, Use of illustrations

UNIT II

Writing of Business and Technical Reports:

Preliminary steps and procedure of writing report, writing various types of reports on technical, business related topics

RECOMMENDED READING

SCHEME OF END SEMESTER EXAMINATION (MAJOR TEST) AND INSTRUCTIONS FOR THE EXAMINER

1. The duration of the exam will be 2 hours.
2. The Question Paper for this theory course shall have three questions in all covering both the units. All will be compulsory with internal choice.
3. Question no. 1 will be of 10 marks. The question may have two/three parts with enough internal choice, covering various components of both the Units.
4. Question no 2 with internal choice will be of 10 marks covering contents of the Unit I. It will be theoretical in nature.

5. Question no 3 will have two parts of 15 marks each. The student will be asked to write reports on business and technical subject/ issue covering contents of Unit II. The emphasis would be on testing the actual report writing on a given business and technical situation/ subject in letter format.

**OBJECTIVE**

To enable students to develop their speaking skills with professional proficiency

**COURSE CONTENT**

Oral Presentations:

Group Discussion; Mock interviews

**Note for the Teacher:**

The teacher concerned, by devising her/ his method, must preview and review the student’s spoken proficiency at the beginning and end of the semester respectively to find the efficacy of the course and degree of improvement in the student.

**RECOMMENDED READING**

**SCHEME OF END SEMESTER EXAMINATION (Practical)**

An external Practical exam of 30 marks of 2 hour duration for the course will be conducted by an external examiner appointed by the competent authority of the University’s.

**NOTE:** Students will be tested for their oral communication competence making them participate in Group discussion, mock situations for interview. Students may also be evaluated through a viva conducted by an external examiner.
The purpose of this course is to inculcate a sense of professionalism in a student along with personality development in terms of quality such as receiving, responding, temperament, attitude and outlook. The student efforts will be evaluated on the basis of his/ her performance / achievements in different walks of life.

A Faculty Counselor will be attached to a group of students which will remain associated with him / her during the entire period of the degree program in the University. Each faculty member will serve as a faculty counselor. They will act like a local guardian for the students associated with him / her and will help them in terms of career guidance, personal difficulties.

B. The student will present a written report before the committee with following in view:

The student will present before the committee his/her achievements during the current academic session in the form of a written report highlighting followings:

I. Academic Performance

II. Extra Curricular Activities / Community Service, Hostel Activities (8 Marks)

III. Technical Activities / Industrial, Educational tour (8 Marks)

IV. Sports/games (14 Marks)

V. Moral values & Ethics (15 Marks)

NOTE: Report submitted by the students should be typed on both sides of the paper.

D. A student will support his/her achievement and verbal & communicative skill through presentation before the committee. (30 Marks)

C. Moral values & Ethics

Syllabus - A few topics from the below mentioned books

A minor test/ Quiz will be conducted during the semester and it will be the duty of the concerned teacher assigned to teach Moral values & Ethics to submit the awards to respective chairman of the department / Director/Principal.

The evaluation of this course will be made by the following Committee.

**University Departments:**

1. Chairperson of the Department Chairman
2. Senior Most Faculty Counselor Member
3. Vice- Chancellor’s Nominee Member

**Affiliated Colleges:**

1. Director/Principal Chairman
2. Head of the Department/Sr. Faculty Member
3. External Examiner to be appointed by the University Member

**Note:** Remuneration will be paid to the external examiner only (at par with the other practical examinations).

### Note:

5. Every student has to participate in the sports activities. Minimum one hour is fixed for sports activities either in the morning or evening. Weightage of Sports is given in General Proficiency & Ethics Syllabus.

6. Students will be permitted to opt for any one elective run by the other department. However, the department shall offer those elective for which they have expertise. The choice of the students for any elective shall not be binding for the department to offer, if the department does not have expertise. The minimum strength of students should be 20 to run an elective course.

7. Assessment of Professional Training-II, undergone at the end of VI semester, will be based on seminar, viva-voce, report and certificate of Professional Training obtained by the student from the industry, institute, research lab, training center etc.

8. The students will be allowed to use non-programmable scientific calculator. However, sharing/exchange of calculator is prohibited in the examination.

13. Electronics gadgets including Cellular phones are not allowed in the examination.

14. Project coordinator will be assigned the project load of maximum of 2 hrs. per week including his own guiding load of one hr. However, the guiding teacher will be assigned maximum of one period of teaching load irrespective of number of students/groups under him/her.
UNIT-I

UNIT-II

UNIT-III

UNIT-IV
Grid generation: algebraic and pde based methods, O-, C-, H-type topologies, unstructured meshes, hybrid meshes, Large scale problems in CFD, iterative solvers, preconditioning techniques, vector and parallel computing, post- processing for visualisation.

Text Books
1. T J R Hughes, The Finite Element Method: Linear Static and Dynamic Finite Element Analysis, Prentice Hall

Reference Books
UNIT-I
INTRODUCTION Initial works in Germany for space travel, Russian and American campaigns, man in space, profile of flight from earth to a destination in space and back. The space shuttle.
PARTICLE DYNAMICS Introduction, Newton’s laws, velocity and acceleration, coordinates and rotation, the spherical pendulum, energy for one particle, angular momentum, energy for systems of particles, angular momentum, the N-body problem.

UNIT-II
THE TWO-BODY PROBLEM: Introduction, the two body problem, energy and angular momentum, orbit equation, Kepler’s laws, orbit determination and satellite tracking.
THE EARTH SATELLITE OPERATIONS: The Hohmann transfer, inclination-change maneuver, launch to rendezvous, decay life time, earth oblateness effect, low thrust orbit transfer.

UNIT-III
RIGID BODY DYNAMICS: Introduction, choice of origin, angular momentum and energy, principal-body-axis frame, particle axis theorem, Euler’s equations, Orientation angle, the simple top.
SATELLITE ATTITUDE DYNAMICS: Torque–Free-axisymmetric Rigid body, The general torque free rigid body, semi-rigid space craft, attitude control: Spinning and Non spinning space craft. The Yo-Yo mechanism, gravity gradient satellite, The dual spin space craft.

UNIT-IV
RE-ENTRY DYNAMICS Introduction, ballistic re-entry, skip re-entry, double dip re-entry, Aero braking, lifting re-entry.
THE SPACE ENVIRONMENT Introduction, The atmosphere, Light and space craft temperature, charged particle motion, magnetic mirrors, The van-atten Belts, radiation effects, Meteors, Meteorites and impact. Our local neighborhood

UNIT-I

INTRODUCTION: Definition of refrigeration & air conditioning; Necessity; Methods of refrigeration; Unit of refrigeration; Coefficient of performance (COP), Fundamentals of air-conditioning system; Refrigerants- Definition, Classification, Nomenclature, Desirable properties; Secondary refrigerants; Eco-friendly refrigerants and environmental issues of refrigeration & air conditioning industry.

AIR REFRIGERATION SYSTEM: Carnot refrigeration cycle, temperature limitations; Brayton refrigeration or the Bell Coleman air refrigeration cycle; Necessity of cooling the aeroplane; Air craft refrigeration systems, Simple cooling and Simple evaporative types, Boot strap and Boot strap evaporative types, Regenerative type and Reduced Ambient type system; problems.

UNIT II

VAPOR COMPRESSION REFRIGERATION (VCR) Systems: Simple Vapor Compression (VC) Refrigeration systems, Limitations of Reversed Carnot cycle with vapor as the refrigerant; analysis of VCR cycle considering degrees of sub cooling and superheating; VCR cycle on p-v, t-s and p-h diagrams; Effects of operating conditions on COP; Liquid suction heat exchanger; actual VCR cycle; comparison of VC cycle with Air Refrigeration cycle, Problems.

MULTISTAGE REF. SYSTEMS- Necessity of compound compression, Compound VC cycle, Inter-cooling with liquid sub –cooling and / or water inter cooler; Multistage compression with flash inter-cooling and / or water inter-cooling; systems with individual or multiple expansion valves; Individual compression system with individual or multiple expansion valves; Individual compression systems with individual or multiple expansion valves but with and without intercoolers. Cascade refrigerating systems and its necessity; selection of pairs of refrigerants for the system; concept of cascade temperature, analysis, multistaging, applications, problems.

UNIT III

AIR-CONDITIONING LOAD CALCULATIONS: Outside and inside design conditions; Sources of heating load; Sources of cooling load; Heat transfer through structure, Solar radiation, Electrical applications, Infiltration and ventilation, Heat generation inside conditioned space; Comfort chart, Design of summer air-conditioning and Winter air conditioning systems, Problems. Air Conditioning Systems with Controls & Accessories: Classifications, Layout of plants; Equipment selection; Air distribution system; Duct systems Design; Filters; Refrigerant piping. Temperature, Pressure, Humidity sensors; Actuators and Safety controls, Accessories.

UNIT IV

OTHER REFRIGERATION SYSTEMS: Vapor Absorption Refrigeration Systems – Basic Systems; COP of the System, Performance, Relative merits and demerits; Properties of aqua ammonia; Electrolux Refrigeration; Study of Lithium bromide water system. Steam Jet Refrigerating System– Introduction, Analysis, Relative merits and demerits, Performance Applications; problems

REFRIGERATION AND AIR CONDITIONING EQUIPMENTS: Type of compressors and their performance curves; types of Condensers; types of expansion devices; types of evaporators. Cooling and dehumidifying coils and cooling towers.

TEXT BOOKS:

REFERENCE BOOKS:

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT-I

OPERATIONS RESEARCH – AN OVERVIEW- Introduction, history, approach, techniques and tools, applications of OR, phases and processes of OR study, limitations of OR.

LINEAR PROGRAMMING- Introduction, Formulation, redundant constraints, Solution-Graphical and Simplex, Gauss-Jordan reduction process in simplex methods, BIG M methods computational problems.

UNIT II

TRANSPORTATION PROBLEM- Introduction, Basic feasible solution of a transportation problem- North-West corner, matrix minimum and Vogel’s Approximation method, Methods for checking optimality of the solution- Stepping stone and MODI method, Unbalanced Transportation problem Degenerate transportation problem. Maximisation in Transportation Problem, computational problems.

ASSIGNMENT PROBLEM- Introduction, solution of an assignment problem- Hungarian Method, Unbalanced Assignment problem, computational problems

ADVANCED TOPICS IN O.R. - Duality, Primal- Dual relationship, Economic interpretation, Shadow price, Post optimality and sensitivity analysis, problems

UNIT III

WAITING LINE MODELS- Introduction, Elements of a queuing system, operating characteristics of a queuing system, queue parameters, M/M/1 queue, problems

NETWORK ANALYSIS IN PROJECT PLANNING (PERT AND CPM)- Introduction, network diagram, event activity, critical path method, PERT, Cost analysis and Crashing the Network, Problems.

UNIT IV

SIMULATION- Introduction, advantages of simulation, limitations of simulation, Monte Carlo Simulation and its application in industries, Problems.

DECISION THEORY- Decision Process, SIMON model, types of decision making environment-certainty, risk, uncertainty, decision making with utilities, problems.

Text Books:
1. Quantitative Techniques by N.D.Vohra, TMH New Delhi

Reference Books:

1. Operations Research by Handy A. Taha- PHI New Delhi

Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.

2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.

**Class Work**: 20 Marks

**Examination**: 30 Marks

**Total**: 50 Marks

**Duration of Examination**: 3 Hours

**LIST OF EXPERIMENTS:**

1. Point relaxation method for Laplace equation for the flow over airfoil
2. Successive Line Relaxation for the Laplace equation over airfoil
3. Structural grid generation over NACA 0012
4. Relaxation method for subsonic full potential equation for flow over airfoil with zero angle of attack
5. Lifting subsonic incompressible potential flow over airfoil
6. Two dimensional Panel method for subsonic incompressible flow over NACA 0012
7. Zoukowski transformation for subsonic incompressible flows

**References**

1. Jack Moran, Theoretical and Computational Aerodynamics
2. Anderson, Computational Fluid Mechanics

**Note:**

1. Eight experiments are to be performed in the Semester.
2. At least six experiments should be performed from the above list. Remaining two experiments may either be performed from the above list or designed & set by the concerned institute as per the scope of the syllabus.
LIST OF EXPERIMENTS:

1. To study the Vapor Compression Refrigeration (VCR) System and determine its C.O.P. Draw the cycle on P-H and T-S diagrams.
2. To study the Mechanical heat pump and find its C.O.P.
3. To study the cut-sectional models of Reciprocating, Rotary and Screw type refrigerant compressors.
4. To study the various controls used in Refrigerating & Air Conditioning systems.
5. To study the Ice-plant, its working cycle and determine its C.O.P and capacity.
6. To study the mixing process for different inlet conditions and plot them on Psychrometric charts and understand the concept of recirculation of air on re-circulated air-conditioning set up.
7. To study the basic air conditioning processes like heating, cooling, humidification, cooling and dehumidification and plot them on Psychrometric chart.
8. To determine the By-pass factor of cooling coil and plot them on Psychrometric charts for different inlet conditions.
9. To study the chilling plant and its working cycle.
10. To study the aqua-ammonia absorption system and find its COP.

Note: 1. Ten experiments are to be performed in the Semester.
2. At least eight experiments should be performed from the above list. Remaining two experiments may either be performed from the above list or designed & set by the concerned institute as per the scope of the syllabus.
The primary objective of this course is to develop in students the professional quality of synthesis employing technical knowledge obtained in the field of Engineering & Technology through a project work involving design, analysis augmented with creativity, innovation and ingenuity.

Project involving design/ fabrication/ testing/ computer simulation/ case studies etc. which commences in the VII Semester will be completed in VIII Semester and will be evaluated through a panel of examiners consisting of the following:

- Chairman of Department  : Chairperson
- Project coordinator      : Member Secretary
- Respective project supervisor : Member

The student will be required to submit two copies of his/her project report to the department for record (one copy each for the department and participating teacher).

Project coordinator will be assigned the project load of maximum of 2 hrs. per week including his own guiding load of one hr. However, the guiding teacher will be assigned maximum of one period of teaching load irrespective of number of students/groups under him/her.

The format of the cover page and the organization of the body of the report for all the B.Tech. will be finalized and circulated by the Dean, Faculty of Engineering and Technology.

At the end of 6th semester each student would undergo four weeks Professional Training in an Industry/ Institute/ Professional / Organization/ Research Laboratory etc. with the prior approval of the Training and Placement Officer of the University and submit in the department a typed report along with a certificate from the organization.

- The typed report should be in a prescribed format.
- The report will be evaluated in the VII Semester by a Committee consisting of three teachers from different specialization to be constituted by the Chairperson of the department. The basis of evaluation will primarily be the knowledge and exposure of the student towards different processes and the functioning of the organization.
- The student will interact with the committee through presentation to demonstrate his/ her learning.
- Teachers associated with evaluation work will be assigned 2 periods per week load.

Duration of Examination: 3 Hours

UNIT I

MONOCHROME TV (PICTURE AND CAMERA TUBES): Monochrome picture tube, Beam reflection, Beam focussing, Screen Phosphor, Face plate, Picture tube characteristics, Picture tube circuit controls, Monochrome Camera Tubes: Basic principle, Image Orthicon, Vidicon, Plumbicon

UNIT II
COLOUR TV ESSENTIALS: Compatibility, Colour perception, Three Colour theory, Luminance, Hue and Saturation, Dispersion and Recombination of light, Primary and secondary colours, luminance signal, Chrominance Signal, Colour picture tube, colour TV Camera, Colour TV display Tubes, colour Signal Transmission, Bandwidth for colour signal transmission, Colour TV controls, Cable TV, Block Diagram and principle of working of cable TV.

PLASMA AND LCD: Introduction, liquid crystals, types of LCD’s, TN, STN, TFT, Power requirements, LCD working, Principle of operation of TN display, Construction of TN display, Behaviour of TN liquid crystals, Viewing angle, colour balance, colour TN display, limitations, advantages, disadvantages, applications.

UNIT III

LED AND DMD: Introduction to LED Television, comparison with LCD and Plasma TV’s, schematic of DMD, introduction to Digital MicroMirror device, Diagram of DMD, principle of working, emerging applications of DMD.

MICROWAVE OVENS AND AIR CONDITIONERS: Microwaves, Transit Time, Magnetron, Waveguides, Microwave Oven, Microwave Cooking, Air conditioning, Components of air conditioning systems, all water Air conditioning systems, all air conditioning Systems, Split air conditioner.

UNIT IV

MICROPHONES: Introduction, characteristics of microphones, types of microphone: carbon, moving coil, wireless, crystal, introduction to tape recorder.

LOUDSPEAKER: Introduction to ideal and basic loudspeaker, loudspeaker construction types of loudspeaker: Dynamic and permanent magnet, woofers, tweeters, brief introduction to baffles, equalisers.

Text Books:

1. Consumer Electronics by S. P. Bali (Pearson Education)
2. Complete Satellite and Cable T.V by R.R Gulati (New Age International Publishers)

Reference Books:

1. Monochrome and Colour Television by R. R. Gulati

Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.

2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
### UNIT I

**INTRODUCTION TO THE POWER DISTRIBUTION SYSTEM:** Description of the power distribution system - voltage levels, Components of the distribution system - Substation, Transformer, feeders, distribution system planning, operation & maintenance objectives, activities involved in O&M, grid management, load scheduling & dispatch, load balancing, 66-33/11 KV substation equipment, 11/0.4 KV substation equipment, Distribution transformers - reasons for DT failures.

### UNIT II

**ENERGY ACCOUNTING & ENERGY AUDIT:** Need for energy accounting, objectives & functions of energy accounting, Energy flow diagram in power distribution system, energy accounting procedure - Energy measurement, and problems in energy accounting & overcoming these problems in energy accounting, Definition, need and types of energy audit, energy audit instruments, procedure for conducting an energy audit.

### UNIT III

**AT&C LOSS REDUCTION & EFFICIENCY IMPROVEMENT:** Concepts and principles of distribution losses - transmission & distribution losses, AT&C losses in power distribution network, factors contributing to high technical & commercial losses. Technical loss reduction - Short term measures for technical loss reduction, long term plans for technical loss reduction, Commercial loss reduction - reasons for commercial losses, measures for commercial loss reduction.

### UNIT IV

**DEMAND SIDE MANAGEMENT:** An introduction, Why DSM?, Benefits of DSM, DSM in power systems: load management, DSM techniques and emerging trends, EC Act 2001, DSM on consumer side - the industrial sector, the agricultural sector, the domestic & commercial sectors, ESCO - a route for DSM.

UNIT-I

ENERGY SOURCES & AVAILABILITY: World energy situation. Indian energy scenario. Comparative study of thermal, hydro, nuclear and gas power plants. Impact of thermal, gas, hydro and nuclear power stations on environment, air and water pollution, green house effect (global warning). Plasma confinement - magnetic confinement and inertial confinement, geothermal, hydrogen energy, fuel cells, Alkaline fuel cells (AFC), Solid oxide fuel cell (SOFC), Molten carbonate fuel cells (MCFC), thermo-electric power, MHD power generation OTEC & tidal waves.

UNIT-II

UNIT-III

UNIT-IV

BIOMASS ENERGY: Introduction to biomass, biofuels & their heat content, biomass conversion

TEXT BOOKS:

1. Electric Power Generation, B.R.Gupta
3. Power Plant Engg: G.D. Rai

REFERENCE BOOKS:

1. Renewable Energy Resources: John Twidell and Tony Weir

Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.

UNIT-I

INTRODUCTION: Internet, intranet and extranet, networking, protocols, genomic data, organization, representation, data base management systems.

SEQUENCING DATA BANK: Introduction, collecting and storing sequence in laboratory, Nucleic acid data bank – Gen Bank, EMBL, AIDS and rNA, protein data bank (PDB), Cambridge Structural Database CSD, genome data bank, hybridoma data bank structure and others.

UNIT-II

SEQUENCE ANALYSIS: Analysis tools for sequence data banks, Pair wise alignment: NEEDLEMAN and WUNSCH algorithms, Smith Waterman, Multiple alignment – CLUSTAL-W, BLAST, FASTA, sequence patterns and motifs and profiles

PREDICTIONS: Secondary and Tertiary structure: algorithms Chao-Fasman algorithm, hidden Markov model, Neural Networking, Protein classification, fold libraries, fold recognition
(threading), homology detection, SRS-Access to biological data banks and integrated data analysis tools.

UNIT-III
MANAGING SCIENTIFIC DATA: Introduction, challenges faced in integration of Biological information, SRS, Kleisli Query System TAMBIS, P/FDM Mediator for a Bioinformatics Database, Federation, Discovery link and Data management

TEXT / REFERENCE BOOKS

- Developing Bioinformatics Computer Skill, ed. Gibes & Jombeck, Shroff Publication
- Bioinformatics, ed. David W. Mount

Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT I

UNIT II

UNIT III

NOISE & POLLUTION: Reduction of noise – Internal & external pollution control through alternate fuels / power plants – Catalytic converters and filters for particulate emission.

UNIT IV

VEHICLE OPERATION AND CONTROL: Computer control for pollution and noise control and for fuel economy – Transducers and actuators – Information technology for receiving proper information and operation of the vehicle like optimum speed and direction.

TEXT BOOKS

REFERENCES

Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT – I

WATER POLLUTION – Classification of water pollutants, water characteristics, effluent standards, primary treatment, secondary treatment – aerobic (activated sludge, aerated lagoons, trickling filter, roughing filter, rotating biological contactor) anaerobic (contact process, UASB).

UNIT – II

AIR POLLUTION: Classification of air pollutants, Particulates: Physical characteristics, mode of formation, setting properties, Control measures.

UNIT – III

SOLID WASTE: Types, sources and properties of solid waste, methods of solid waste treatment and disposal

SOLID WASTE MANAGEMENT – Generation, Collection and techniques for ultimate disposal, Elementary discussion on resource and energy recovery.

UNIT – IV

Elementary treatment of nuclear pollution, metal pollution, noise pollution their effects & control.

Trace element: Mechanism of distribution, essential and non essential elements, trace of element in marin environment, its ecological effects and biological effects.

Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.

2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT I

FOUNDATIONS:-

INFORMATION SYSTEM: Introduction to Information System and MIS, Decision support and decision making systems, systems approach, the systems view of business, Managing the digital firm, Electronic Commerce and Electronic business, DBMS, RDBMS, introduction to Telecommunication and Networks

I.T.INFRASTRUCTURE:- Managing Hardware Assets, Managing Software Assets, Managing Data Resources, Internet And New It Infrastructure.

UNIT II

CONCEPTUAL SYSTEM DESIGN: Define the problems, set systems objective, establish system constraints, determine information needs determine information sources, develop alternative conceptual design and select one document the system concept, and prepare the conceptual design report. Information Systems Security and Control, Ethical and Social Impact of Information Systems.

UNIT III

DETAILED SYSTEM DESIGN: Inform and involve the organization, aim of detailed design, project management of MIS detailed design, identify dominant and trade of criteria, define the sub systems, sketch the detailed operating sub systems and information flow, determine the degree of automation of each operation, inform and involve the organization again, inputs outputs and processing, early system testing, software, hardware and tools propose an organization to operate the system, documentation of detailed design

UNIT IV

IMPLEMENTATION, EVALUATION AND MAINTENANCE OF THE MIS: Plan the implementation, acquire floor space and plan space layouts, organize for implementation, develop procedures for implementation, train the operating personnel, computer related acquisitions, develop forms for data collection and information dissemination, develop the files test the system, cut-over, document the system, evaluate the MIS control and maintain the system. Pitfalls in MIS development, Redesigning the organization with Information systems, Managing Knowledge Work.

**Note:**

5. Every student has to participate in the sports activities. Minimum one hour is fixed for sports activities either in the morning or evening. Weightage of Sports is given in General Proficiency & Ethics Syllabus.

6. The students will be allowed to use non-programmable scientific calculator. However, sharing/exchange of calculator is prohibited in the examination.

7. Electronics gadgets including Cellular phones are not allowed in the examination.

8. The minimum strength of students should be 20 to run an elective course.

6. The choice of students for any elective subject shall not be binding for the department offer, if the department does not have expertise.
UNIT-I

UNIT-II

UNIT-III

Stability and Control: Longitudinal: Two degrees of freedom analysis, complete missile aerodynamics with forward and rear control, Static stability margin
Directional: Introduction, cruciform configuration, Body, Wind and Tail contribution on directional control. Lateral: Induced Roll, Internal control and design consideration for cruciform and monowing; Damping in Roll.

UNIT-IV

Dynamic Stability: Equations of motion, longitudinal and lateral dynamics.
Miscellaneous: Launching problems. Re-entry and Recovery of Space Vehicles, Modern Concepts, Manned Missions.

**UNIT-I**

**Normal Shock Waves:** Equation of motion for a normal shock, normal shock relations for a perfect gas, stagnation conditions, Rankine-Hugoniot relations Propagating shock waves, weak shock, Reflected shock wave, centered expansion waves, shock tube.

**Oblique Shock Waves:** Introduction, oblique shock relations, relation between shock angle and turning angle, use of oblique shock chart, Supersonic flow over a wedge, weak oblique shocks, Supersonic compression, Detached shock.

**UNIT-II**

**Expansion Waves:** Supersonic expansion by turning, Prandtl-Meyer flow. Simple and non-simple regions, Reflection and interaction of shocks and expansion waves, Mach reflection, method of characteristics.

**UNIT-III**

**Lift and drag in supersonic flow:** Shock expansion theory, Flow field in supersonic flow. Thin airfoil theory, Analytical determination of lift, drag coefficients on flat plate, bi-convex, diamond-shaped profiles in supersonic flow, supersonic flow past wings.

**Potential equation for compressible flows:** Introduction, Crocco's theorem, derivation of basic potential equation for compressible flow, linearization of potential equation & boundary conditions. Small perturbation theory, application to wavy wall and bodies of revolution.

**UNIT-IV**

**Measurements in compressible flows:** Instruments used in compressible flow; Rayleigh-Pitot-formula, Subsonic, transonic and supersonic wind tunnels- Design and operation of supersonic wind tunnel. Flow visualization by interferometer, schlieren and shadow graph methods. Instrumentation for Hypersonic wind and shock tunnels, Aeroballistic range, Terminal ballistic range. Rocket-sled facility.

The objectives of the course remains
- To learn how to carry out literature search
- To learn the art of technical report writing
- To learn the art of verbal communication with the help of modern presentation techniques

A student will select a topic in emerging areas of Engineering & Technology and will carry out the task under the observation of a teacher assigned by the department.

He/She will give a seminar talk on the same before a committee constituted by the chairperson of the department. The committee should comprise of three faculty members from different specializations. The teacher associated in the committee will be assigned 2 hours teaching load per week.

However, guiding students’ seminar will not be considered towards teaching load.

The format of the cover page and the organization of the body of the seminar report for all the undergraduate programs will be finalized and circulated by the Dean, Faculty of Engineering and Technology.

AER 407B  PROJECT
B. Tech. Semester – VIII (Aeronautical Engineering)

The project started in VII Semester will be completed in VIII Semester and will be evaluated through a panel of examiners consisting of the following:

- Chairperson of Department : Chairperson
- Project coordinator : Member
- External expert : To be appointed by the University

The student will be required to submit two copies of his/her project report to the department for record (one copy each for the department and participating teacher).
Project coordinator will be assigned the project load of, maximum of 2 hrs. per week including his own guiding load of one hr. However, the guiding teacher will be assigned maximum of one period of teaching load irrespective of number of students/groups under him/her.

The format of the cover page and the organization of the body of the report for all the B. Tech. will be finalized and circulated by the Dean, Faculty of Engineering and Technology.

The purpose of this course is to inculcate a sense of professionalism in a student along with personality development in terms of quality such as receiving, responding, temperament, attitude and outlook. The student efforts will be evaluated on the basis of his/ her performance / achievements in different walks of life.

The evaluation will be made by the committee of examiners constituted as under:

1. Dean, Faculty of Engineering & Technology/ Director /Principal of affiliated college : Chairperson
2. Chairperson of the department : Member
3. External expert : Appointed by the university

A. The student will present a written report before the committee with following in view:

The student will present before the committee his/her achievements during the current academic session in the form of a written report highlighting followings:

I. Academic Performance ---------
II. Extra Curricular Activities / Community Service, Hostel Activities (12 Marks)
III. Technical Activities / Industrial, Educational tour (12 Marks)
IV. Sports/games (16 Marks)

Note: Report submitted by the students should be typed on both sides of the paper.

B. A student will support his/ her achievement and verbal & communicative skill through presentation before the examiners. (40 Marks)

C. Faculty Counselor Assignment (20 Marks)

It will be the duty of the student to get evaluated by respective faculty counselor and to submit the counselor assessment marks in a sealed envelope to the committee.

A counselor will assess the student which reflects his/ her learning graph including
followings:

1. Discipline throughout the year
2. Sincerity towards study
3. How quickly the student assimilates professional value system etc.
4. Moral values & Ethics

AER-432 B THEORY OF ELASTICITY

UNIT-I

2-D PROBLEMS IN RECTANGULAR COORDINATES: Solution by polynomials, bending of cantilever loaded at end, bending of beam by uniform load, 2-D problems in polar coordinates, general equations in polar coordinates, stress distribution symmetrical about an axis.

PHOTOELASTICITY: Photoelastic stress measurement, circular polariscope, photoelastic stress determination, determination of principal stresses, 3-D photoelasticity

UNIT-II

2-D PROBLEMS IN POLAR COORDINATES: Pure bending of curved bars, strain components in polar coordinates, displacements for symmetrical stress distributions, rotating disks, bending of curved bar by a force at the end, effect of circular holes on stress distribution in plates, concentrated force at a point of a straight boundary.

UNIT-III

3-D STRESS-STRAIN ANALYSIS: Introduction, stress ellipsoid and stress-director surface, determination of principal stresses, stress invariants, determination of maximum shearing stresses, homogeneous deformation, strain at a point, principal axes of strain, rotation.

3-D PROBLEMS OF ELASTICITY: Uniform stress, stretching of prismatic bar, twist of circular shafts, pure bending of prismatic bars and plates.

UNIT-IV

TORSION: Torsion of straight bars, elliptic cross section and other elementary solutions, membrane analogy, torsion of bar of narrow rectangular cross section, torsion of rectangular
bars, torsion of rolled profile sections, torsion of hollow shafts, torsion of thin tubes, torsion of circular shafts of variable diameter.

TEXT BOOKS: 1 Theory of Elasticity by S.P. Timoshenko & J.N. Goodier
2 Aircraft structures for Engg. Students by T H G Megson

AER-434 B  KINEMATICS AND DYNAMICS OF MACHINES

Duration of Examination: 3 Hours

UNIT- I

BASIC CONCEPTS: Kinematics and dynamics of machines, mechanisms, pairs, inversion of slider crank chains, degrees of freedom, Kutzbach’s equation, Grubler criterion and numerical problems

VELOCITY AND ACCELERATION: Basic concepts of machines, link, mechanisms, kinematic chain, relative motion of parts of mechanisms, displacement, velocity, acceleration, diagrams of all basic mechanisms including quick return motion mechanism, coriolis component,

UNIT- II

FRICITION: Efficiency of inclined plane, friction in V threads, screw jack, pivots and collar plate and cone clutches, power lost in friction, friction circle and friction axis of a link.

STATIC FORCE ANALYSIS: Equations of equilibrium, couple, equilibrium of force and four force systems, free body diagrams, forces on slider crank mechanism, quick return mechanism and four bar mechanism, slider crank mechanism with friction at turning pairs and numerical problems.

UNIT- III

5 INERTIA FORCES IN MECHANISMS: Determination of forces and couples for a link, inertia of reciprocating parts, dynamically equivalent system, analytical and graphical methods, inertia force analysis of basic engine mechanism (crank connecting rod and piston etc.). Torque required to overcome inertia and gravitational force of a four bar linkage.

GYROSCOPE: Definition, axis of spin, axis of precession, gyroscopic couple, effect on the movement of ships and vehicles, ship and plane stabilization, stability of automobiles and locomotive taking a turn.

UNIT- IV
BALANCING: Classification, need for balancing, balancing for simple and multiple masses, static and dynamic balancing—primary and secondary balancing for reciprocating masses, inside and outside cylinder locomotive balancing, swaying couple and variation of tractive effort, partial balancing of locomotive, balancing of coupled locomotive and its advantages, multicylinder in line engines, balancing of V engines, balancing machines

TEXT BOOKS:

REFERENCE BOOKS:
2. Theory of Machines: Thomas Beven.
4. Kinematics of Machines—Dr. Sadhu singh, Pearson Education

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.

UNIT-II

UNIT-III

DISPLAY: Comparison of earlier flight deck (Electromechanical type instruments) to modern flight deck (glass fight deck), Cathode Ray Tube (CRT), Active Matrix Liquid Crystal Display (AMLCD), Head Down Display (HDD), Head Up Display (HUD), Helmet Mounted Display (HMD), Integrated Standby Instrument System (ISIS)

UNIT-IV

AUTOMATIC FLIGHT CONTROL SYSTEM: Longitudinal, Lateral & Direction Autopilot

BOOK:
UNIT I

AUTOMATION AND MANUFACTURING FLEXIBILITY: Automation and types, reasons for automation, Basic elements of an Automated System: Sensors, Actuators, Analog-to-Digital and Digital-to-Analog Converters, Input/Output Devices for Discrete Data, Definition of Manufacturing Flexibility, Need of Manufacturing flexibility, Types of Manufacturing Flexibilities, Classification of Manufacturing systems on Flexibility types, Resources and Processes to increase flexibility of manufacturing systems

GROUP TECHNOLOGY (GT): GT and its benefits, Parts classification and coding systems, the composite part concept, GT based Machine cell design through Cluster Analysis and Hollier’s Algorithm; Numerical problems

UNIT II

FLEXIBLE MANUFACTURING SYSTEMS (FMS): Components of an FMS, FMS work stations. Material handling and storage system: Functions of the handling system, FMS layout configurations, Computer control system: Computer function, FMS data file, system reports. Planning the FMS, FMS applications and benefits

UNIT III

ROBOTIC TECHNOLOGY: Common robot configurations, Joints and links, work volume, types of robot control, accuracy and repeatability, interlocks, advantages and disadvantages. Brief review of Robot programming and languages: Motion programming, simulation and offline programming, work cell control. Applications of Robot: Material handling, processing operations, assembly and inspection

MATERIALS HANDLING SYSTEMS: Automated flow lines, methods of work part transport, Transfer Mechanisms, buffer storage, automation for machining operations, part feeding devices, Brief review of Automated assembly systems and types,

UNIT IV

COMPUTER INTEGRATED MANUFACTURING SYSTEMS (CIMS): Elements of CIM, Brief Reviews of Computer aided process Planning, Computer Integrated Production Management
Systems, MRP, Capacity Planning, MRPII, Shop floor Control systems, Computer Process Monitoring, Computer aided quality control, Adaptive Control of Manufacturing

**TEXT BOOKS:**

**REFERENCE BOOKS:**

**Note:**

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.

2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT I

ROBOTIC MANIPULATION: Automation and Robots; Robot Classification – Drive Technologies, Work-Envelope Geometries, Motion Control Methods, Applications; Robot Specifications – No. of Axes, Capacity and Speed, Reach and Stroke, Tool Orientation, Repeatability, Precision, Accuracy, Operating Environment, An Example, Rhino X-3.

UNIT II

DIRECT KINEMATICS: The Arm Equation Homogenous Co-ordinates – Frames, Translations and Rotations, Composite Homogenous Transformations; Screw Transformations; Link Co-ordinates; The Arm Equation; A Five-Axis Articulated Robot; A Four-Axis SCARA Robot; A Six-Axis Articulated Robot; Problems.

INVERSE KINEMATICS: Solving the Arm Equation: The Inverse Kinematics Problem; General Properties of Solutions; Tool Configuration; Inverse Kinematics of a Five-Axis Articulated Robot, Four-Axis Scara Robot, Six-Axis Articulated Robot and Three-Axis Planer Articulated Robot; A Robotic Work Cell; Problems.

UNIT III

WORK SPACE ANALYSIS AND TRAJECTORY PLANNING: Work Space Analysis; Work Envelope of a Five-Axis Articulated Robot; Work Envelope of a Four Axis Scara Robot; Work Space Fixtures; The Pick and Place Operation; Continuous Path Motion; Interpolated Motion; Straight Line Motion; Problems.

DIFFERENTIAL MOTION AND STATICS: The Tool Configuration Jacobian Matrix; Joint – Space Singularities; Generalised Inverses; Resolved – Motion Rate Control; n > 6; Rate Control of Redundant Robots: n > 6; Rate Control using (1) – Inverses; The Manipulator Jacobian; Induced Joint Torques and Forces; Problems.

UNIT IV

MANIPULATOR DYNAMICS: Lagrange’s Equation; Kinetic & Potential Energy; Generalised Force; Lagrange – Euler Dynamic Model; Dynamic Models of a Two-Axis Planer Articulated Robot and A Three-Axis SCARA Robot; Direct & Inverse Dynamics; Recursive Newton - Euler Formulation; Dynamic Model of a One-Axis Robot; Problems.
ROBOT CONTROL: The Control Problems; State Equations; Constant Solutions; Linear Feedback Systems; Single-Axis PID Control; PD-Gravity Control; Computed –Torque Control; Variable-structure Control; Impedance Control; Problems.

Text Books:

1. Fundamental of Robotics (Analysis & Control) by Robert J.Schilling, Published by PHI, Pvt. Ltd., New Delhi.
2. Introduction to Robotics (Mechanics & Control) by John J. Craig, Published by Addition Wesley (Intl. Student Edition).

Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.

2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.

Duration of Examination: 3 Hours

**UNIT-I**

AIR TRAFFIC CONTROL: Principles of Air Navigation and Air Traffic Control, Overview of CNS & ATM, Separation standards, Radar and Non-radar separation, wake turbulence longitudinal separation minima, Precision approaches for landing, Radar systems for ATC

AIRLINES: Introduction to airline industry and economics, determination of operating costs, Airline route selection and scheduling, planning of flight operations, special topics in airline operations, Emergence of LCC.

**UNIT-II**
AIRPORTS: Aircraft characteristics affecting airport design, Airport layouts and configurations, Geometric design of the airfield, Wind Rose Diagram, Geometric design of the airfield,

UNIT-III
MAINTENANCE SCHEDULES: Maintenance of aircraft, its components, systems and sub-systems. Types of maintenance schedules, Mandatory schedules, Inspection of aircraft and components: Types of Inspections, Various Aircraft Manuals, Service Letters, Service Bulleting, Advisory Circulars, Repair, Modifications, Alteration, Reconditioning, History Record Sheet

UNIT-IV
MAINTENANCE OF STRUCTURE AND VARIOUS SYSTEMS: Maintenance of aircraft structure, propeller, power-plant, undercarriage, hydraulic system, fuel system, air-conditioning system

AIRCRAFT ASSEMBLY AND RIGGING: Aircraft Assembly, Rigging, Alignment of fixed surfaces and flight controls and systems in details, balancing, Inspection and Maintenance, Flight control system of Helicopter.

Suggested Readings:

1. Aircraft Maintenance and Repair :Kroes et.al GLENCOE ,1993
2. Aircraft Basic Science :Kroes et.al.
UNIT I

ULTRASONIC MACHINING - Introduction, Basic Principle of USM, Elements of Process, tool feed mechanism, cutting tool system design, effect of parameters on MRR, economic considerations, applications, limitations of the process, advantages and disadvantages.

ABRASIVE JET MACHINING - Process description, features of AJM, Parameters in AJM, metal removal rate (MRR) in AJM. Advantages, limitations and Practical applications of AJM. Water Jet Machining - Jet cutting equipments, process details,

UNIT II

CHEMICAL MACHINING, basic technique of chemical machining, Mechanism of metal removal, process variables, advantages and applications. Electrochemical machining, principle of ECM process, ECM process detail, chemical reactions in ECM, tool work gap, process variables and characteristics in ECM, advantages, disadvantages and application of ECM. Electrochemical Grinding - Material removal, surface finish, accuracy, advantages, applications.

UNIT III

THERMAL SPARK EROSION PROCESSES: Electric Discharge Machining (EDM) or spark erosion machining processes, practical aspects of spark erosion machining, mechanism of metal removal, spark erosion generators, electrode feed control, dielectric fluids, flushing, electrodes for spark erosion, selection of electrode material, tool electrode design, surface finish, machining accuracy, machine tool selection, applications. Wire cut EDM. Advantages and disadvantages of spark erosion machining.

Laser beam machining (LBM)- Introduction, lasing process, Laser machining system, Thermal effect on workpiece, calculation of MRR, description of laser drilling machine, cutting speed and accuracy of cut, advantages and limitations.

UNIT IV

PLASMA ARC MACHINING (PAM): introduction, non thermal generation of plasma types of plasma arc, the stabilized arc, mechanism of plasma torch, mechanism of metal removal, PAM parameters, equipments for D.C. plasma torch unit, safety precautions, economics, other applications of plasma jets.
ELECTRON BEAM MACHINING (EBM) – Description of the process, need for high vacuum in EBM, process parameters in EBM. Advantages and disadvantages of EBM. Electron beam welding.

Text Books:

1. Advanced Machining Processes by V.K. Jain. Allied Publishers Pvt Ltd
2. Modern Machining Methods by Adithan, Khanna Publishers
4. Advanced Methods of Machining by J. A. Mcgeough, Springer

Note:

1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
UNIT-I

INTRODUCTION: History of wind power technology, wind resources, economic viability, experience in Europe and America, The Indian experience, factors in favor of wind energy, environmental effects.

UNIT-II

CLASSIFICATION OF WIND MACHINES: Types of wind energy collectors: horizontal axis rotors: Head on, Fixed pitch and variable pitch blade rotors, cross wind. Vertical axis rotors; Savonius type and its variants, Darrieus type, lift based devices and drag devices

SOME CASE STUDIES: Description of various types of wind energy conversion systems (WECS) in use through their design features from 1kW range onwards. Considerations of complexities getting in to the design and operation with increase in size and power output.

UNIT-III

APPLICATIONS: Stand alone system; water pumping, direct heating and electric generation applications. Wind energy farms; Grid connected mode, hybrid mode.

WINDMILL SITING: Wind histories, wind characteristics, power in wind stream, recording wind streams, wind rose, choice of site.

UNIT-IV

PERFORMANCE OF WIND MACHINES: Power extraction from the wind stream, Ideal power coefficient, Typical performance curves for various types, maximum power coefficients, speed-torque curves, power density of a wind stream, ducted system, vortex generator.

SYSTEM DESIGN: Objectives, power requirements, wind availability, type and size of WECS required, cost of energy delivered, WECS viability, system characteristics, system requirements, system evaluation, design optimization, wind system design synthesis.
