Note:
1. Every student has to participate in the sports activities. A minimum 1 hour is fixed for sport activities either in the morning or evening. Weightage of Sports is given in General Proficiency & Ethics Syllabus.
2. Students are allowed to use single memory, non-programmable scientific calculator during exam. However, sharing of calculator and any other materials is not allowed.
3. Student will be permitted to opt for any one elective run by the other departments. However, the departments shall offer those electives for which they have expertise. The choice of the students for any elective shall not be binding for the department to offer, if the department does not have expertise. The minimum strength of students should be 20 to run an elective course.
4. Assessment of Professional Training-II, carried out at the end of VI semester, will be based on seminar, viva-voce, report and certificate of Professional Training obtained by the student from the industry / institute / research lab / training centre, etc.
5. Project Coordinator will be assigned the project load of, maximum 2 hours per week including his own guiding load of 1 hour. However, the guiding teacher will be assigned maximum of 1 period of teaching load irrespective of number of students or groups under him / her. Project will commence in VII semester where the students will identify the Project problem, complete design, procure the material, start the fabrication, complete the survey etc., depending upon the nature of the problem. Project will continue in VIII semester.

**Unit-I**

**Introduction to Biochemistry and Medicine:** Cell, Eukaryotic cell structure, functional role of each Organelle, Sub cellular Fractionation: Differential Centrifugation, Redox potentials & Oxidative phosphorylation, Transport of substances across biological membrane function.

**Unit-II**

**Enzymes (Proteins):** Chemical nature of enzymes (Proteins). Spectrophotometric measurement of enzymes (proteins), isolation methods, Study of enzyme properties, Diagnostic enzymes, Enzyme biotechnology

**Nucleic Acids:** Composition and functions of nucleic acids (A brief account) Genes, Outlines of DNA structure, Recombinant DNA and its applications

**Unit-III**

**Urine chemistry:** Chemical composition of urine under normal and abnormal conditions.

**Instrumentation:** Principles and applications of photometry, spectrophotometry fluorometry, Neaphalometry and turbidimetry, Biochemical analysis carried out in the estimation of blood constituents like glucose, urea, creatinine, protein, cholesterol, bilirubin etc., Separation of Serum Proteins by electrophoresis, Automation in biochemical analysis.

**Unit-IV**

**Acid base homeostasis:** Acids, bases, measurement of pH and glass electrodes, Role of kidney and lungs in acid base balance, Biochemical measurement of acid base status of patients, Blood gas analyzer, disorders of acid-base balances.

**Isotopes:** Definitions, Units, radioactive isotopes, Applications of isotopes in life sciences and medicine.

**TEXT BOOKS**

1. Biochemistry- Dr. U. Satyanarayana (Books & Allied pvt. Ltd.)
2. Instant Notes on Biochemistry- Hooper et.al. (BIOS Scientific Publishers)
3. Enzymes-Biochemistry, Biotechnology, Clinical chemistry-Trenor Palmer (Woodhead Publication 2007)

**REFERENCE BOOKS**

3. Fundamentals of Biochemistry-J.L. Jain, Sanjay Jain (S.Chand Publications)

**Note:**

1. In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit. All questions carry equal marks.
2. The students will be allowed to use non-Programmable Scientific Calculator. However, sharing/exchange of calculator are prohibited in the examination.
3. Electronics gadgets including Cellular phones are not allowed in the examination.
BME203B  INTRODUCTION TO BIOMEDICAL ENGINEERING
B. Tech. Semester – III (Biomedical Engg.)

Class Work : 25 Marks
Examination : 75 Marks
Total : 100 Marks
Duration of Examination : 3 Hours

Unit-I
Generalized Instrumentation Systems: General properties of input transducers
Dynamic characteristics: First and second order characteristics, Time delay, Error free instrument, Transfer functions, design criteria, generalized instrument specifications

Unit-II
Biomedical Transducers: Displacement and Pressure measurement, Resistive-Potentiometers, strain Gauges, Bridge circuits, Inductive-Variable Inductance and LVDT, Capacitive type, Piezoelectric transducers, Types of diaphragms, bellows, bourdon tubes, Temperature measurement: Thermistor, thermistor characteristics and its linearization, thermocouple resistive temperature detector, Radiation Thermometry, Fiber Optic sensor, Optical measurement, Basic Instrumentation Amplifier, Differential Amplifier, CMR

Unit-III
Biopotentials & Bioelectrodes: Biopotential electrodes: Electrode electrolyte interface, half cell potential polarization, polarizable and nonpolarizable electrodes, Calomel electrode, electrode circuit model, electrode skin interface and motion artifact. Body surface electrodes, Internal electrodes: Needle and wire electrodes (different type), Micro electrodes: metal, supported metal, micropipet (metal filled glass and glass micropipette, Electrodes) microelectronic, properties of microelectrodes, method of use, Electrodes used for measurement ECG, EEG, EMG

Unit-IV
Electrophysiology & Introduction to Imaging Techniques: Electrical properties of nerves, the exterior potential land the electrocardiogram, Interaction of photons and charged particles with matter. Study of Various imaging modalities (X rays, CT, MRI, PET)

TEXT BOOKS
1. Transducers in BME: Richard S. Cobbold (John Wiley & Sons)
2. Medical Instrumentation: Applications and Design by John G. Webster. (Marcel Dekkar Publishers)

REFERENCE BOOKS
1. Biomedical sensors-Fundamentals and applications by Harry N. Nortan (Plennum Press)
2. Biomedical Instrumentation and measurements-by Leslie Cromwell, Fred J. Weibell (McGraw Hill Publications)

Note:
1. In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit. All questions carry equal marks.
2. The students will be allowed to use non-Programmable Scientific Calculator. However, sharing/ exchange of calculator are prohibited in the examination.
3. Electronics gadgets including Cellular phones are not allowed in the examination.

**Unit-I**

**Biomedical Instrumentation:** Introduction and classification of biomedical instrumentation systems, components and design considerations of a biomedical instrumentation system, desirable characteristics in designing of biomedical instrumentation system, performance parameters of instruments.

**Neuromuscular and Sensory systems:** Description of Human Brain, Electroencephalogram (EEG) and Electromyogram (EMG) measurement and recording, Block diagram description, evoked potentials, nerve conduction studies (NCS), biofeedback instrumentation, galvanic skin response (GSR) measurements.

**Unit-II**

**Blood Pressure measurement:** Characteristics of blood pressure measurement, types: Direct and Indirect methods of blood pressure measurement

**Patient monitoring system:** Objective of patient monitoring system, Types: Cardiac Monitors, bedside monitors, central monitors. Computer assisted patient monitoring system, apnea detectors.

**Unit-III**

**Electrical Stimulators for Human Body:** Stimulators, types of stimulators: galvanic, faradic, surge faradic, interrupted galvanic, strength duration curve (S-D curve), respirators and their types.

**Biomedical Recorders:** Principles and Characteristics of a recording system, ECG recorders and their types: single channel, three channel, stress test (TMT) vector cardiograph, Holter monitors, Strip charts recorder, stylus recorders, single point recorder, UV recorder, X-Y recorder, thermal recorders, and Magnetic tape recorder.

**Unit-IV**

**Electrical Safety of Medical Equipment and Patient:** Patient safety, classification of medical devices and their safety standards, leakage current, micro, macro shock, different types of safety circuits for medical equipments, measures to reduce shock hazards.

**Special Techniques for measurement of Non-electrical biological parameters:** Electrical Impedance Plethysmography (EIP), Photoplethysmograph (PPGs), respirometers.

**TEXT BOOKS**
1. Principles of Medical Electronics and Biomedical Equipments: C Raja Rao and SK Guha, (University Press India Limited)
2. Biomedical Instrumentation and Measurements: R Anandanatratrajan (Prentice Hall of India)

**REFERENCE BOOKS**

3. Electronics gadgets including Cellular phones are not allowed in the examination.
ECE203B  ANALOG ELECTRONICS
B. Tech. Semester – III (Biomedical Engg.)

L  T  P  Credits
3  1  -  4

Class Work : 25 Marks
Examination : 75 Marks
Total : 100 Marks
Duration of Examination : 3 Hours

Section I

Unit 1: BASIC SEMICONDUCTOR AND PN-JUNCTION THEORY:

Unit 2: CHARACTERISTICS OF DIODE:

Section II

Unit 3: DIODE APPLICATIONS:
Half Wave, Full Wave Center Tapped, Full Wave Bridge(Rectification), Series Clipping Circuit, Shunt Clipping Circuit, Clamping Circuit, Bridge Voltage Doubler, Filtering Circuit Using Capacitor & Inductor.

Unit 4: JUNCTION TRANSISTOR:

Section III

Unit 5: BJT BIASING:

Unit 6: SMALL SIGNAL CIRCUIT:
Two Port Network, Hybrid(H-Parameter)Model, Typical Values of H-Parameter Model, Conversion of CE, CB, CC Configuration to Equivalent Hybrid Model, CB Circuit Analysis, CE circuit with & without R_E analysis, CC circuit analysis, Analysis of CE, CB & CC Configuration with approximate Hybrid Model, Miller's Theorem, Dual of Miller Theorem.

Section IV

Unit 7: HIGH FREQUENCY ANALYSIS:
Hybrid Pi Model, CE Short Circuit Gain, Frequency Response, Alpha Cut off Frequency, Gain Bandwidth Product, Emitter Follower at High Frequencies.

Unit 8: FET:
Low Frequency FET Amplifiers, Transfer Characteristics of FET, MOSFET, Enhancement Mode, Depletion Mode of FET, Circuit Symbol of MOSFET, V Introduction, The Junction FET, Basic Construction, Operation, P- Channel FET, N-Channel FET, High Frequency Model of FET, MOSFET.

Reference Books:
3. Electronics Device Circuit By David A. Bell -- Oxford
4. Integrated Electronics By Millman Halkias -- TMH.

NOTE:
In the Semester examination, the examiner will set 08 questions in all selecting two from each Section & one from each unit. The candidates will be required to attempt five questions in all at least one from each section. All questions carry equal marks.

UNIT 2: TRANSIENT RESPONSE: Laplace Transform: Review of properties and applications of Laplace transform of complex waveform. Transient Response of RC, RL, RLC to various excitation signals such as step, ramp, impulse and sinusoidal excitations using Laplace transform.

UNIT 4: FILTERS: Filter fundamentals, classification of Filter, Analysis & design of prototype high-pass, prototype low-pass, prototype band-pass, and prototype band-reject Filter.

TOPOLOGY: Principles of network topology, graph matrices, network analysis using graph theory

TEXT BOOKS
1. Network Theory Analysis & Synthesis: Smarajit Ghosh; PHI.

REFERENCE BOOKS
1. Introduction to modern Network Synthesis: Van Valkenburg; John Wiley
2. Network Analysis: Van Valkenburg; PHI
3. Basic circuit theory: Dasoer Kuh; McGraw Hill.
4. A Course in Electrical Circuit Analysis by Soni & Gupta; Dhanpat Rai Publication.
6. Networks and Systems: D.Roy Choudhury; New Age International
7. Engineering Circuit Analysis; Hayat & Kemmerley TMH.

Note: Eight questions are to be set - at least two from each unit. Students have to attempt five questions in all, restricting at least one from each unit.
LIST OF EXPERIMENTS

1. Carbohydrates: Estimation of Blood Glucose
2. Proteins: Test for Albumin and globulin.
3. Estimation of Blood Urea
4. Estimation of Blood Cholesterol
5. Liver function test: Serum Glutamic Oxaloacetic Transaminase (SGOT)
6. Liver function test: Serum Glutamic Pyruvic Transaminase (SGPT)
7. Alkaline phosphates test
8. Study of abnormal urine content: bile pigment, bile salt
9. Estimation of total serum bilirubin
10. Estimation of pH and acidity test for the given biological solution

Note: Ten experiments are to be performed selecting any seven experiments from the above list. Remaining three experiments may either be performed from the above list, or designed and set by the department as per the scope of the syllabus.
LIST OF EXPERIMENTS

1. Introduction to different type of electrodes – surface, suction, floating, disposable, needle and microelectrodes.
2. To study the placement of EEG electrodes, recording of EEG waveform and its interpretation using 32 channel PSG system.
3. Recording of ECG waveform from 12 limb leads and the interpretation of ECG waveform.
4. To study the placement of EMG electrodes, recording of EMG waveform and its interpretation.
6. Realization of Nerve Muscle Stimulator
7. Realization of Wheatstone bridge transducers of strain gauge.
8. To study Troubleshooting of ECG machine
9. Realization of thermistor, its characteristics and its linearization.
10. Hospital visit for various imaging modalities (X ray, CT, MRI and PET)

Note: Ten experiments are to be performed selecting any seven experiments from the above list. Remaining three experiments may either be performed from the above list, or designed and set by the department as per the scope of the syllabus.

**LIST OF EXPERIMENTS**

1. To study the
   a) T.S. of Pancreas Gland
   b) T.S. of Liver Gland
   c) T.S. of Thyroid Gland
   d) T.S. of Adrenal Gland
   e) T.S. of Spinal cord

2. a) To study the effects of various trends of solution on RBCs
    b) To study the effect of acid and alkali on RBCs
    c) Effect of chloroform on RBCs

3. To study estimation of erythrocyte sedimentation rate(ESR)

4. Estimation of hemoglobin percentage by haemometer

5. To determine the total no. of RBCs in Human blood

6. To determine the total no. of WBCs in Human blood

7. To prepare the blood film of your own blood. Stain it and study the blood picture and identify the various blood cells

8. To determine your own blood group

9. To determine the bleeding and clotting time of blood

10. To study models of sensory organs available in the lab

**Note:** Ten experiments are to be performed selecting any seven experiments from the above list. Remaining three experiments may either be performed from the above list, or designed and set by the department as per the scope of the syllabus.

LIST OF EXPERIMENTS:

1. Study of half wave and full wave rectifiers.
2. Study of power supply filter.
3. Study of diode as a clipper and clamper.
4. Study of zener diode as a voltage regulator.
5. Study of CE amplifier for voltage, current and Power gains input, output impedances.
6. Study of CC amplifier as a buffer.
7. To study the frequency response of RC coupled amplifier.
8. Study of transistor as a constant current source in CE configuration.
9. To study characteristics of FET.
10. Study of FET common source amplifier.
11. Study of FET common drain amplifier.
12. Graphical determination of small signal hybrid parameter of bipolar junction transistor.
13. Study and design of a DC voltage doubler.

Note:
1. Total ten experiments are to be performed in the semester.
2. At least seven experiments should be performed from the above list. Remaining three experiments should be performed as designed and set by the concerned institution as per the scope of the syllabus.

Each student has to undergo a workshop at least 4 weeks (80-100 hours) at the end of II semester during summer vacations. Out of the four weeks, two weeks would be dedicated to general skills and two weeks training for specialized discipline/department. The evaluation of this training shall be carried out in the III semester.

**LIST OF JOBS TO BE CARRIED OUT DURING THIS PERIOD**

1. To study and prepare different types of jobs on machine tools (lathe, shaper, planer, slotter, milling, drilling machines).
2. To prepare lay out on a metal sheet by making and prepare rectangular tray, pipe shaped components e.g. funnel.
3. To prepare joints for welding suitable for butt welding and lap welding.
4. To study various types of carpentry tools and prepare simple types of wooden joints.
5. To prepare simple engineering components/shapes by forging.
6. To prepare mold and core assembly, to put metal in the mold and fettle the casting.
7. To study of CNC lathe, CNC Milling and EDM Machines.
8. Any work assigned in electrical workshop, computer hardware/language lab, electronics workshop, biomedical hardware, automobile workshop etc.

**This student will prepare job(s)/project as an individual or in a group using workshop in house infrastructure.**

The student shall submit a typed report.

Training will be evaluated on the spot out of 20 marks.

The report will be evaluated in the III Semester by a Committee consisting of two teachers.

The student will interact with the committee through presentation to demonstrate his/her learning. The basis of evaluation will primarily be the knowledge and exposure of students on different kinds of Machines/instruments/tools/skills etc. The committee will evaluate out of 30 marks.

The committee shall submit the awards out of 50 marks.
BME202B  BIOMEDICAL SIGNAL PROCESSING
B. Tech. Semester – IV (Biomedical Engg.)

L  T  P  Credits  
3  1  -  4  

Class Work  :  25 Marks  
Theory  :  75 Marks  
Total  :  100 Marks  
Duration of Examination  :  3 Hours  

Unit-I

Unit-II

Unit-III
Digital signals and systems: Classification of systems causal; time varying, time invariant, lumped. Discrete time system, impulse and frequency response. Pulse transfer function Introduction to digital signals systems. Convolution, Auto-correlation and cross-correlation

Unit-IV
Biomedical Signal Processing: Data reduction Techniques, Data acquisition and conversion system, Power spectrum analysis, Sampling Theorem, aliasing Nyquist criteria, ADC’s and DAC’s.Use of Matlab signal processing toolbox on various real bio-medical signals.

TEXTBOOKS
1. Digital signal processing, Proakis (PHI Publishers)

REFERENCE BOOKS
1. Biomedical Signal Processing by Metin Akay (Academic press)
2. Biomedical Signal Processing by Tompkins (Academic press)
3. Theory and Application of Digital Signal Processing by Rabiner and Gold (EEE pub)
4. Engineering Electronics by Mauro R (Prentice – Hall Publisher)

Note:
1. In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit. All questions carry equal marks.
2. The students will be allowed to use non-Programmable Scientific Calculator. However, sharing/ exchange of calculator are prohibited in the examination.
3. Electronics gadgets including Cellular phones are not allowed in the examination.
BME204B  BIOMEDICAL EQUIPMENTS-I
B. Tech. Semester – IV (Biomedical Engg.)

L  T  P  Credits  Class Work  :  25 Marks
3  1  -  4  Theory  :  75 Marks
Total  :  100 Marks
Duration of Examination  :  3 Hours

Unit -I

Unit -II

Unit -III
Clinical Laboratory Instruments and Audiometers: Medical Diagnosis with chemical tests, Spectrophotometry, Spectrophotometer Type instruments, Colorimeters, Automated Biochemical Analysis Systems, Clinical Flame photometers, Mechanism of Hearing, Measurement of sound, Basic Audiometer, Pure Tone Audiometer, Speech Audiometer, Audiometer System Bekesy, Evoked Response Audiometry System, Calibration of Audiometers.

Unit -IV
Blood -Cell Counters & Gas Analyzers: Types of Blood cells, Methods of Cell Counting, Coulter Counters, Automatic Recognition and Differential Counting of Cells. Blood pH; pCO$_2$; PO$_2$ measurement, blood gas analyzer.

TEXT BOOKS
2. Biomedical Instrumentation and Measurements by Leslie Cromwell, Fred J. Weibell (Erich A. Pfeiffer)

REFERENCE BOOKS
2. Introduction to Biomedical Equipment Technology by Carr Brown (Pearson Education Publications)

Note:
1. In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit. All questions carry equal marks.
2. The students will be allowed to use non-Programmable Scientific Calculator. However, sharing/exchange of calculator are prohibited in the examination.
3. Electronics gadgets including Cellular phones are not allowed in the examination.

Unit-I

**Introduction to probability**: random experiments, concept of probability, axioms and theorem of probability, conditional probability, Bayes’ theorem, fundamental principle of counting, continuous & discrete distributions, special probability distributions.

Unit-II

**Sampling and estimation theory**: Scope & Purpose of statistics, population and sample, sample mean and variance, frequency distributions, computation of mean, variance and moments for grouped data. Estimation theory: point estimates and interval estimates, confidence interval estimates, maximum likelihood estimates.

**Tests of hypotheses and significance**: statistical hypothesis, null hypothesis, type I and type II errors, level of significance, one tailed and two tailed tests, P value, special test of significance for large and small samples, relationship between estimation theory and hypothesis testing, quality control charts, Chi-square test for goodness of fit, students t-test, relationship between F & \(X^2\) test

Unit-III

**Curve fitting, regression and correlation**: regression, method of least squares, multiple regression, generalized correlation coefficient, probability interpretation of regression and correlation, sampling theory of regression and correlation.

**Analysis of variance**: purpose of analysis of variance, one-way classifications & two way classifications, experimental design.

Unit-IV

**Experimental design**: Clinical trials-study design, organization and planning, randomized clinical trials, sample sizes for observational studies, monitoring surveys, event survival analysis.

### Unit-I

**Introduction to Medical Informatics:** Introduction to medical informatics, historical review of development of computers and informatics, structure of medical informatics, Application and importance of Medical informatics, Natural language processing, Knowledge and Models, Information and Communication Systems, Medical Computer Systems - Systematization of Computer Applications.

### Unit-II

**Management of Medical data:** Classification of medical data and information, uncertainty of medical data, examples of classification systems. Database management, development of database management system for a hospital environment, Security Issues in Computer and Internet: Different types of security hazards and methods for prevention of these hazards. Information Safety and Security in Health Care Information Systems.

### Unit-III

**Applications of Computers in Medical Field:** Computers in Clinical Laboratory: Role and Applications of different equipments employing computer in medical laboratory. Computers for Critically ill/handicapped: Role and Applications of different devices for handicaps and severely ill patients.

Evaluation of health information systems and Technology. Introduction to Bio-informatics and computational biology.

### Unit-IV

**Computers & Artificial Intelligence:** Medical decision - support systems. Medical Expert System. Rationales for computer - aided decision making, Decision models - quantitative models, qualitative models, Knowledge Based systems - characteristic features of KBS, knowledge representation in KBS, Artificial intelligence methods

#### TEXTBOOKS

2. Handbook of Medical Informatics by Bohn Stafleu, J. H. van Bemmel and M. A. Musen (eds.) (Van Loghum, Houten 1997)

Section I
Unit 1: FUNDAMENTALS OF DIGITAL TECHNIQUES:

Unit 2: COMBINATIONAL DESIGN USING GATES:
Design using gates, Simplifications of SOP and POS Boolean Expressions, Karnaugh map up to four variables.

Section II
Unit 3: COMBINATIONAL DESIGN USING MSI DEVICES:
Multiplexers and Demultiplexers and their use as logic elements, Decoders, Adders / Subtractors, BCD arithmetic circuits, Encoders, Code Converters, Decoders / Drivers for display devices.

Unit 4: SEQUENTIAL CIRCUITS:

Section III
Unit 5: DIGITAL LOGIC FAMILIES:
Switching mode operation of p-n junction, bipolar and MOS devices. Bipolar logic families:RTL, DTL, DCTL, HTL, TTL, ECL, MOS, and CMOS logic families. Tristate logic, Interfacing of CMOS and TTL families.

Unit 6: SEMICONDUCTORS MEMORY DEVICES:
Memory organizations, Characteristics of memory devices, Classifications of semiconductors memories.

Section IV
Unit 7: A/D AND D/A CONVERTERS:
Sample and hold circuit, weighted resistor and R-2R ladder D/A Converters, specifications for D/A converters. A/D converters: Quantization, parallel comparator, successive approximation, counting type, dual-slope ADC, specifications of ADCs.

Unit 8: PROGRAMMABLE LOGIC DEVICES:
PLA, PAL, FPGA and CPLDs.

TEXT BOOKS
2. Digital Electronics: Green; Pearson

REFERENCE BOOKS
1. Digital Integrated Electronics: Taub & Schilling; MGH
2. Digital Principles and Applications: Malvino & Leach; McGraw Hill.
3. Digital Design: Morris Mano; PHI.

Note:
1. In the Semester examination, the examiner will set 08 questions in all selecting two from each Section & one from each unit. The candidates will be required to attempt five questions in all atleast one from each section. All questions carry equal marks.
2. The students will be allowed to use non-Programmable Scientific Calculator. However, sharing/exchange of calculator are prohibited in the examination.
3. Electronics Gadgets including Cellular Phones are not allowed in the examination.

Duration of Exam. : 3 Hours

Section I

Unit 1: MULTISTAGE AMPLIFIER:

Unit 2: FEEDBACK AMPLIFIERS:

Section II

Unit 3: OSCILLATORS:

Unit 4: POWER AMPLIFIER:

Section III

Unit 5: VOLTAGE REGULATORS:
Voltage Regulation, Basic Series Regulators, Basic Shunt Regulators, Power Supply Parameters, Basic Switching Regulators, Step up Configuration, Step down Configuration, IC Voltage Regulator, SMPS.

Unit 6: SWITCHING CIRCUIT:
Switching action & Characteristics of a Transistor, Switching Times in Transistor, Multivibrators, Astable Multivibrator, Monostable Multivibrator, 555 Timer, Monostable & Astable Operation with 555 Timer

Section IV

Unit 7: A/D CONVERTERS:
Basic Principle of DAC & ADC, Types of DAC Circuits: Resistor Divider, R/2R Ladder network, Types of ADC circuits: Parallel Comparator, Counter type, Successive approximation & Dual Slope, Specifications.

Unit 8: SPECIAL SEMICONDUCTOR DEVICES:

REFERENCE BOOKS

1. Electronics Device &Circuit, By David.A. Bell - Oxford University Press.
5. Integrated Electronics, By Millman Halkias - TMH.
7. Electronics Device & Circuit, By I. J. Nagrath - PHI
8. Electronic Principles, By Albert Malvino.

Note: In the Semester examination, the examiner will set 08 questions in all selecting two from each Section & one from each unit. The candidates will be required to attempt five questions in all at least one from each section. All questions carry equal marks.

UNIT – I  
The Multidisciplinary nature of environmental studies, Definition, scope and importance.

Need for Public awareness

UNIT – II  
NATURAL RESOURCES:
Renewable and non-renewable resources:

Natural resources and associated problems.

a) Forest resources: Use and over-exploitation: deforestation, case studies, Timber exploitation, mining, dams and their effects and forests tribal people.

b) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

c) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.

d) Food resources: World food problems, changes, caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

e) Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources; case studies.

f) Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

UNIT- III  
ECOSYSTEMS:

- Concept of an ecosystem, Structure and function of an ecosystem, Producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids.

- Introduction, types, characteristic features, structure and function of the following eco-system:
  a) Forest ecosystem, Grassland ecosystem, Desert ecosystem.
  b) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

UNIT- IV  
BIODIVERSITY AND ITS CONSERVATIONS:

- Introduction – Definition: Genetic, species and ecosystem diversity.

- Biogeographically classification of India.

- Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.

- Biodiversity at global, National and local levels.

- India as a mega-diversity nation.

- Hot-spots of biodiversity.

- Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.

- Endangered and endemic species of India.

UNIT – V  
ENVIRONMENTAL POLLUTION:
Definition, causes, effects and control, measures of:

Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal Pollution, Nuclear hazards

- Solid waste management: Causes effects and control measures of urban and industrial wastes.

- Role of an individual in prevention of pollution.

- Pollution case studies.

- Disaster management: Floods, earthquake, cyclone and landslides.
UNIT – VI  SOCIAL ISSUES AND THE ENVIRONMENT:

a) From unsustainable to sustainable development  
b) Urban problems related to energy 
c) Water conservation, rain water harvesting, watershed management 
d) Resettlement and rehabilitation of people; its problems and concerns, case studies 
e) Environmental ethics: Issues and possible solutions  
f) Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, Case studies 
g) Wasteland reclamation, Consumerism and waste products 
h) Environment Protection Act, Air (Prevention and Control of Pollution) Act, Water (Prevention and Control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act  
i) Issues involved in enforcement of environmental legislation, Public awareness

LIST OF EXPERIMENTS

1. Design a low pass filter and plot graph of gain versus frequency.
2. Design a high pass filter and plot graph of gain versus frequency.
3. Design a band pass filter and plot graph of gain versus frequency.
4. Generate a Huffman code for a waveform using digiscope.
5. Using digiscope study waveform generation and power spectrum analysis.
6. Designing of IIR and FIR filters.
7. Realization of turning point compression of a noise signal.
8. Realization of the cross correlation, auto correlation and convolution functions using digiscope.
9. Develop a MATLAB program to perform synchronized averaging for a noisy signal.
10. Write a MATLAB program to compute RMS value at each instant for the EMG signal.

**Note:** Ten experiments are to be performed selecting any seven experiments from the above list. Remaining three experiments may either be performed from the above list, or designed and set by the department as per the scope of the syllabus.
LIST OF EXPERIEMENTS

1. Realization of pulmonary function analyzer using spirogram.
2. To study oximeters.
3. Designing of instrumentation amplifier
4. Realization of pressure changes using strain gauge.
5. To study a regulated power supply.
6. To determine Bradycardia and Tachycardia using ECG Training Kit.
7. To determine heart rate using ECG simulator Kit.
8. Realization of single beam / double beam.
10. Study on autoanalyzer / cell counter/Blood gas analyzer.

Note: Ten experiments are to be performed selecting any seven experiments from the above list. Remaining three experiments may either be performed from the above list, or designed and set by the department as per the scope of the syllabus.
**LIST OF EXPERIMENTS:**

1. Study of TTL gates –AND, OR, NOT, NAND, NOR, EX-OR, EX-NOR
2. Design & realize a given function using K-maps and verify its performance.
3. To verify the operation of Multiplexer & De-multiplexer.
4. To verify the operation of Comparators.
5. To verify the truth table of S-R, J-K, and T & D Type flip flop.
6. To verify the operation of bi-directional shift register.
7. To design & verify the operation of 3 bit synchronous counter.
8. To design & verify the operation of synchronous UP/DOWN decade counter using JK flip flop & derive a seven segment display using the same.
9. To design & verify the operation of asynchronous UP/DOWN decade counter using JK flip flop & derive a seven segment display using the same.
10. To design and realize a sequence generator for a given sequence using JK flip-flop.
11. Study of CMOS, NAND & NOR gates and interfacing between TTL and CMOS gates.
12. Design a 4-bit shift register and verify its operation. Verify the operation of a ring counter and a Johnson counter.

**Note:-**

1. Total ten experiments are to be performed in the semester.
2. At least seven experiments should be performed from the above list. Remaining three experiments should be performed as designed and set by the concerned institution as per the scope of the syllabus.
LIST OF EXPERIMENTS

1. To Study frequency response of RC coupled amplifier.
2. To Study different types of feedback topology.
3. To Study RC phase shift oscillator.
4. To study Wein bridge oscillator.
5. To Study three terminal IC voltage regulator.
6. To draw characteristics of a transistor.
7. To study CE amplifier and calculate its gain.
8. To study 555 timer as a square wave generator.
9. To study SMPS power supply.
10. To study characteristics of SCR.
11. To study characteristics of DIAC.
12. To study UJT as a relaxation oscillator.

Note:-
1. Total ten experiments are to be performed in the semester.
2. At least seven experiments should be performed from the above list. Remaining three experiments should be performed as designed and set by the concerned institution as per the scope of the syllabus.
## Field Work:
- Visit to a local area to document environmental assets – river/ forest/ grassland/ hill/ mountain.
- Visit to a local polluted site-Urban/ Rural/ Industrial/ Agricultural.
- Study of common plants, insects, birds.
- Study of simple ecosystems – pond, river, hill slopes, etc. (Field work equal to 5 lectures hours).

### Note:
The awards of this paper shall not be counted in the award of the Degree/DMC.
The purpose of this course is to inculcate a sense of professionalism in a student along with personality development in terms of quality such as receiving, responding, temperament, attitude and outlook. The student efforts will be evaluated on the basis of his/her performance/achievements in different walks of life.

A Faculty Counselor will be attached to a group of students which will remain associated with him/her during the entire period of the degree program in the University. Each faculty member will serve as a faculty counselor. They will act like a local guardian for the students associated with him/her and will help them in terms of career guidance, personal difficulties.

A. The student will present a written report before the committee with following in view:

The student will present before the committee his/her achievements during the current academic session in the form of a written report highlighting followings:

I. Academic Performance
II. Extra Curricular Activities / Community Service, Hostel Activities (8 Marks)
III. Technical Activities / Industrial, Educational tour (8 Marks)
IV. Sports/games (14 Marks)
V. Moral values & Ethics (15 Marks)

NOTE: Report submitted by the students should be typed on both sides of the paper.

B. A student will support his/her achievement and verbal & communicative skill through presentation before the committee. (30 Marks)

C. Moral values & Ethics

Syllabus - Process for Value Education, self-evaluation concept and process.

A minor test will be conducted during the semester and it will be the duty of the concerned teacher assigned to teach Moral values & Ethics to submit the awards to respective chairman of the department / Director/Principal.

The evaluation of this course will be made by the following Committee.

University Departments:
1. Chairperson of the Department Chairman
2. Senior Most Faculty Counselor Member
3. Vice-Chancellor's Nominee Member

Affiliated Colleges:
1. Director/Principal Chairman
2. Head of the Department/Sr. Faculty Member
3. External Examiner to be appointed by the University Member

Note: Remuneration will be paid to the external examiner only (at par with the other practical examinations).
BME301B  BIOMECHANICS & REHABILITATION ENGINEERING

Unit-I

**General Principles:** Introduction to biomechanics, kinesiology, basic mechanical concepts, types of motion, movement terms. Basic kinematics concepts, vectors & trigonometry, Position of anatomical axis & corresponding movements of the body part, free body diagram.

Unit-II

**Tissue Biomechanics:** Solids and Structures: Biological Materials Properties, Viscoelasticity, Simple Structure, Hydrostatic Structure, Structural Systems, Biomechanical characteristic of bone & the soft tissue structure: tendons, ligaments, muscles, function & physiological factors, frequency of firing motor units, muscle recruitment

Unit-III

**Patterns: Push/Throw Continuum:** Biomechanics of push - like motions, Biomechanics of throw - like motions

**Movement Biomechanics:** Gait analysis, body & limbs: mass & motion characteristics actions, forces transmitted by joints. Joints forces results in the normal & disable human body, normal & fast gait on the level.

Unit-IV

**Prosthetics & Orthotics:** Principles in designing orthosis & prosthesis: Principles of three-point pressure, total constant and partial weight releaving, Design Considerations, Purpose for providing prostheses & orthosis: Various aspects regarding diagnosis, prognosis, stature & socio-economic condition, Classification in prosthetics & orthosis: Lower Extremity orthosis & prostheses, Upper Extremity orthosis & prosthesis, Spinal orthosis, Recent developments in prosthetics & orthosis.

TEXTBOOKS

1. Kinesiology: The Mechanics and Pathomechanics of Human Movement-Carol A. Oatis (Publisher-Lippincott Williams & Wilkins)
2. A textbook of Biomedical Engineering –Edited by R.M. Kennedy

REFERENCE BOOKS

2. Biomechanics: - White & Puyator (Private publication UAE)
3. Text book of Rehabilitation- S.Sunder (Jaypee Publisher)
4. Biomedical Engineering Fundamentals- Joseph D. Bronzino

Note:

1. In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit. All questions carry equal marks.
2. The students will be allowed to use non-Programmable Scientific Calculator. However, sharing/ exchange of calculator are prohibited in the examination.
3. Electronics gadgets including Cellular phones are not allowed in the examination.
BME303B CLINICAL ENGINEERING
B. Tech. Semester – V (Biomedical Engg.)

Unit -I

Unit -II

Neurology: Diseases of nervous system, Electroencephalography, Pneumoencephalography, neuromuscular stimulation, Electromyography, Clinical applications. Motor neuron disorders, the electrical study of reflexes, the silent period. The F response, The H reflex, the axion reflexes, Disorders of neuromuscular transmission.

Unit –III

General Surgery & Gastroenterology: Pre- operative preparation for surgical patient, Study and operation of surgical equipment, safety aspects in electro-surgical units, Anatomy and physiology of G.I.T. Nutritional support and parenteral therapy, Height and weight estimations according to age. Intravenous cannulae, stomach wash tubes, Introduction to Hypertension and Diabetes.

Unit-IV

Ophthalmology, Auditory study and Diathermy: The genesis and basis of electroretinogram (ERG) diagnosis, the genesis of the electrooculogram (EOG) with applications, Color Vision testing equipments, Sneller’s chart, keratometer, refractometer, Slit lamp biomicroscopy, opthalmoscope, retinoscope, tonometer, perimeter, contact lenses, Basic outline of auditory receptors, cochlear implants, hearing aids, Electronystography, Short wave and Microwave Diathermy, Ultrasonic therapy unit.

- TEXT BOOKS

REFERENCE BOOKS

Note:
1. In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit. All questions carry equal marks.
2. The students will be allowed to use non-Programmable Scientific Calculator. However, sharing/ exchange of calculator are prohibited in the examination.
3. Electronic gadgets including Cellular phones are not allowed in the examination.
Cardiac Pacemakers: Need for a pacemaker, External and Implantable pacemaker, types of implantable pacemaker, Asynchronous and Synchronous (demand) mode of operation. Working principles, Block diagram of ventricular demand synchronous pacemakers, programmable pacemaker, packaging of pacemakers, power sources for implantable pacemakers, Lead wires and electrodes with their problems, Susceptibility of implantable pacemakers to electrical interference and remedial measures, recent developments in implantable pacemakers.

Prosthetic heart valves and Heart lung machine: Qualitative requirements categories; Mechanical and tissue valves, types of medical valves, ball and cage, tilting disc, and bileaflet valves, types of tissue valves, homografts or allografts (human cadaver) and heterografts or xenografts (procine or bovine). Governing principles and usage, main components, operational aspects, functional details of bubble, thin film, membrane type of blood oxygenators.

TEXT BOOKS

REFERENCE BOOKS
1. Bioinstrumentation- J. Webster (Wiley & Sons).

Note:
1. In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit. All questions carry equal marks.
2. The students will be allowed to use non-Programmable Scientific Calculator. However, sharing/exchange of calculator are prohibited in the examination.
3. Electronic gadgets including Cellular phones are not allowed in the examination.
Unit-I

Introduction: Introduction to telemedicine, evolution of telemedicine, block diagram of telemedicine system, scope, benefits and limitations of telemedicine, applications: Tele-cardiology, tele-oncology, telesurgery, tele-care, tele-health, telemedicine, robotics and tele-surgery, introduction to RIS & PACS and HIS/RIS/PACS integration, PACS architecture.

Unit-II

Unit-III

Unit-IV

Recent trends in telemedicine: Tele radiology: Basic parts of tele-radiology system: Image Acquisition system, Display system, Communication network, Interpretation. Tele Pathology: color images of sufficient resolution: Dynamic range, spatial resolution, compression methods, security and confidentiality tools pertaining to laboratory testing, access to health care services – health education and self care, use of RF-ID in telemedicine.

Unit-I

Unit-II

Unit-III

ACTIVE FILTERS AND OSCILLATORS: Transfer Function, Active Filters, First Order LP & HP Butterworth Filters, Second Order LP & HP Butterworth Filters, Higher Order Filters, Band Pass Filters, Band Rejection Filters, Oscillators: Phase Shift, Wein Bridge Oscillator, quadrature oscillator, Square Wave Generator, Triangular Wave Generator, saw tooth wave generator, Voltage Controlled Oscillator.

Unit-IV
NON LINEAR CIRCUITS: Voltage Comparator, Zero Crossing Defector, Schmitt Trigger, Peak Detector, Sample and Hold Circuit, Voltage To Frequency and Frequency To Voltage Converter, ADC and DAC, clippers and clampers, absolute value output circuit.

Reference Books:
1. OPAMPS and Linear Integrated Circuit By Ramakant A Gayakwad -- PHI
2. Design with Operational Amplifiers and Analog Integrated Circuits By Sergio Franco -- MGH
4. Linear Integrated Circuits By D.Roy Choudhary & S.Jain—New Age

NOTE:
In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all, at least one from each unit. All questions carry equal marks.
ECE309B MICROPROCESSOR AND INTERFACING
B. Tech. Semester – V (Biomedical Engg.)

L T P Credits
3 1 -  4

Class Work : 25 Marks
P/VV : 75 Marks
Total : 100 Marks
Duration of Examination : 3 Hours

Unit-I
THE 8086 MICROPROCESSOR ARCHITECTURE: Architecture, block diagram of 8086, details of sub-blocks such as EU, BIU; memory segmentation and physical address computations, program relocation, addressing modes, instruction formats, pin diagram and description of various signals.

INSTRUCTION SET OF 8086 & PROGRAMMING: Instruction execution timing, assembler instruction format, data transfer instructions, arithmetic instructions, branch instructions, loop instructions, NOP and HLT instructions, flag manipulation instructions, logical instructions, shift and rotate instructions, directives and operators, programming examples.

Unit-II
THE X86 FAMILY (80186, 80286, 80386, 80486) MICROPROCESSOR ARCHITECTURE AND PROGRAMMING: Architecture, block diagram, details of sub-blocks, hardware features and description of various signals, interrupts, multitasking, addressing modes, instruction set and programming example.

Unit-III
INTERFACING DEVICE: The 8255 PPI chip: Architecture, control words, modes and examples.

PERIPHERAL DEVICES: Introduction to DMA process, 8237 DMA controller, 8259 Programmable interrupt controller, Programmable interval timer chips.

Unit-IV
COMMUNICATION INTERFACE: Parallel interface, serial interface, PCI interface, PCMCIA, USB interface.

PERSONNAL COMPUTER: Modern PC, motherboard, chipset, expansion buses, memory-SIMM and DIMM.

Reference Books:

NOTE:
In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all, at least one from each unit. All questions carry equal marks.
LIST OF EXPERIMENTS

</tbody>
</table>

Class Work : 20 Marks
P/VV : 30 Marks
Total : 50 Marks
Duration of Examination : 3 Hours

1. To determine the coefficient of static friction between two given material surfaces with the help of an inclined plane.
2. To study the lever action by using ‘Bell Crank Lever’ of the human muscle.
3. Stress strain analysis of lower limb prosthesis using 16channel BIOPAC system.
4. To determine the hardness of given bone using hardness tester.
5. To determine the moment of Inertia of a stepped pulley or a flywheel.
6. To determine the effect of the principle of conservation of angular momentum on human body.
7. To determine the mechanical properties of bone using UTM.
8. To verify Bernoulli’s Theorm, for fluid flow through pipes.
9. To study gate analysis and center of gravity on a plane figure.
10. To determine muscle force using dynamometer.

Note: Ten experiments are to be performed selecting any seven experiments from the above list. Remaining three experiments may either be performed from the above list, or designed and set by the department as per the scope of the syllabus.
LIST OF EXPERIMENTS

1. To design and realize synchronous/ asynchronous pacemaker.
2. To realize the controls of Defibrillator machine.
3. Study of different types of oxygenators used in hemodialysis machine.
4. To realize the working of anesthesia and ventilator machine with different controls.
5. To realize and investigate the stimulator designs in the lab.
6. To realize and investigate the different modes of triggering in artificial pacemaker.
7. To realize and investigate the results of Advance Biofeedback system.
8. To investigate stress test analysis using TMT machine.
9. To study Nerve and muscle conduction using PC based Physiology system.
10. To realize the working of ENG machine.

Note: Ten experiments are to be performed selecting any seven experiments from the above list. Remaining three experiments may either be performed from the above list, or designed and set by the department as per the scope of the syllabus.
LIST OF EXPERIMENTS

1. Realization of Amplitude Modulation and determination of Modulation index.
2. Investigation of Frequency Modulation and determination of Modulation index.
3. Study of Phase Modulation.
5. Realization of Pulse Width Modulation.
7. Study of Pulse Code Modulation.
8. To investigate different digital modulation techniques: ASK, PSK, FSK.
10. Hospital visit to telemedicine center at AIIMS, Delhi or CSIO, Chandigarh.
11. Case study for use of RF-ID in telemedicine.

Note: Ten experiments are to be performed selecting any seven experiments from the above list. Remaining three experiments may either be performed from the above list, or designed and set by the department as per the scope of the syllabus.
LIST OF EXPERIMENTS

1. To study the architecture of 8086 microprocessor and 8086 microprocessor kit
2. Write a program to add the contents of the memory location 3000:0400 H to the content of 4000:0700 H and store the result in 6000:0900 H
3. Write a program to add 16 bit number using 8086 instruction set.
4. Write a multiplication of two 16 bit number using 8086 instruction set.
5. Write a program for division of two 16 bit numbers using 8086 instruction set.
6. Write a program factorial of a number.
7. Write a Program to transfer a block of data without overlap.
8. Write a Program to transfer a block of data with overlap.
9. Write a program to find the average of two numbers.
10. Write a Program to check whether data byte is odd or even
11. Write a program to find maximum number in the array of 10 numbers.
12. Write a program to find the sum of the first ‘n’ integers.
13. Write a program to generate a square wave.
14. Write a program to generate a rectangular wave.
15. Write a program to generate a triangular wave.

Note:-
1. Total ten experiments are to be performed in the semester.
2. At least seven experiments should be performed from the above list. Remaining three experiments should be performed as designed and set by the concerned institution as per the scope of the syllabus.
At the end of 4th semester each student would undergo four weeks Professional Training in an Industry/ Institute/ Professional Organization/ Research Laboratory etc. with the prior approval of the Training and Placement Officer of the University and submit in the department a typed report along with a certificate from the organization.

The typed report should be in a prescribed format.

The report will be evaluated in the V Semester by a Committee consisting of three teachers from different specialization to be constituted by the Chairperson of the department. The basis of evaluation will primarily be the knowledge and exposure of the student towards different processes and the functioning of the organization.

The student will interact with the committee through presentation to demonstrate his/her learning.

Teachers associated with evaluation work will be assigned 2 periods per week load.
**Unit-I**

**INPUT / OUTPUT RELATIONSHIP:** System / Plant model, illustrative examples of plants & their inputs and outputs, open loop & closed loop control system & their illustrative examples, Mathematical modeling and representation of physical systems, Concept of transfer function, relationship between transfer function and impulse response, order of a system, block diagram algebra, signal flow graphs: Mason’s gain formula & its application, characteristic equation, derivation of transfer functions of electrical and electromechanical systems.

**Unit-II**

**TIME DOMAIN ANALYSIS:** Typical test signals, time response of first order systems to various standard inputs, time response of 2nd order system to step input, time domain specifications, steady state error and error constants, concept of stability, pole-zero configuration and stability, necessary and sufficient conditions for stability, Hurwitz stability criterion, Routh stability criterion and relative stability. Root locus concept, development of root loci for various systems, stability considerations.

**Unit-III**

**FREQUENCY DOMAIN ANALYSIS:** Relationship between frequency response and time-response for 2nd order system, polar, Nyquist, Bode plots, stability, Gain-margin and Phase Margin, relative stability, frequency response specifications.

**Unit-IV**

**COMPENSATION:** Necessity of compensation, compensation networks, application of lag and lead compensation, basic modes of feedback control, proportional, integral and derivative controllers.

**CONTROL COMPONENTS:** Synchros, servomotors, stepper motors, magnetic amplifier.

**TEXT BOOK**

**REFERENCE BOOKS**
4. Modern Control Engineering, R.C. Dorf & Bishop; Addison-Wesley Publishers.

**NOTE:**
In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all, at least one from each unit. All questions carry equal marks.
BME302B  INTRODUCTION TO BIOMATERIALS
B. Tech. Semester – VI (Biomedical Engg.)

Class Work : 25 Marks
Examination : 75 Marks
Total : 100 Marks
Duration of Examination : 3 Hours

Unit-I

**Introduction:** Definition of biomaterials, requirements of biomaterials, classification of biomaterials, Comparison of properties of some common biomaterials. Effects of physiological fluid on the properties of biomaterials, Surface properties, physical properties and mechanical properties of materials. Host tissue reactions to biomaterials

**Metallic implant materials:** Stainless steel, Co-based alloys, Ti and Ti-based alloys. Importance of stress-corrosion cracking, corrosion behavior and the importance of passive films for tissue adhesion. Hard tissue replacement implant: Orthopedic implants and Dental implants. Soft tissue replacement implants: Percutaneous, skin implants and vascular implants.

Unit-II

**Polymeric implant materials:** Classification of polymers according to thermosets, thermoplastics and elastomers: Polyolefins, polyamides, acrylic polymers, fluorocarbon polymers, silicon rubbers, acetal. Physiochemical characteristics of biopolymers. Biodegradable polymers for medical purposes, Biopolymers in controlled release systems, Synthetic polymeric membranes and their biological applications.

**Ceramic implant materials:** Definition of bioceramics. Common types of bioceramics: Aluminium oxides, Glass ceramics, Carbons. Bioreorbable and bioactive ceramics

Unit-III

**Composite implant materials:** Mechanics of improvement of properties by incorporating different elements. Composite theory of fiber reinforcement (short and long fibers, fibers pull out). Polymers filled with osteogenic fillers (e.g. hydroxyapatite). Host tissue reactions to composite materials.

**Biocompatibility & toxicological screening of biomaterials:** Definition of biocompatibility, blood compatibility and tissue compatibility. Toxicity tests: acute and chronic toxicity studies (in situ implantation, tissue culture, haemolysis, thrombogenic potential tests, systemic toxicity, intracutaneous irritation test), sensitization, carcinogenicity, mutagenicity and special tests.

Unit-IV

**Sterilisation Techniques:** Definition of sterilization, Types of sterilization: autoclaving, ETO and gamma radiation. Effects of sterilization on the properties of materials.

**TEXTBOOKS**

**REFERENCE BOOKS**
1. Biomaterials by Lawrence Stark & Gyan Agarwal
2. Biomaterials - An Interfacial approach by L. Hench & E. C. Ethridge
3. Biomedical Engineering Fundamentals by Joseph D. Bronzino (Publisher CRC)

**Note:** In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit. All questions carry equal marks.
2. The students will be allowed to use non-Programmable Scientific Calculator. However, sharing/exchange of calculator are prohibited in the examination.
3. Electronics gadgets including Cellular phones are not allowed in the examination.
BME304B  MODELING AND SIMULATION
B. Tech. Semester – VI (Biomedical Engg.)

L  T  P  Credits  Class Work  :  25 Marks
3  1  -  4  Examination  :  75 Marks

Total  :  100 Marks
Duration of Examination  :  3 Hours

Unit-I

Unit-II

Unit-III
Simulation: Basic concepts of simulation - data manipulation, data exchange of the human structure, Manual Simulation of Systems: Simulation of Queuing Systems such as single channel and multi channel queue, lead time demand, inventory system, reliability problem, time-shared computer model, job-shop model, Statistical Models in Simulation: Overview of probability and statistics, useful statistical model, discrete distribution, continuous distribution, empirical distribution and Poisson process. Queueing Models: Characteristics of queueing systems, queueing notations, long run measures of performance of queueing systems, Steady state behavior of Markovian models (M/G/1, M/M/1, M/M/c) overview of finite capacity and finite calling population models, Network of Queues.

Unit-IV

TEXTBOOKS

REFERENCE BOOKS

Note:
1. In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit. All questions carry equal marks.

Unit-I

**Introduction to fiber optics:** Basic fiber link, applications, principles of light: Introduction, EM spectrum, internal & external reflections, Snell’s law, optical fiber numerical aperture, Fresnel reflection.

**Optic fiber & its properties:** Introduction, Basic fiber construction, propagation of light, modes of operation, refractive index profile, types of fibres, dispersion, data rate and bandwidth, attenuation, losses.

Unit-II

**Connectors, Splices & Couplers:** Introduction, splices: mechanical, fusion, protection of splice, connectors: SMA, STC, bionic etc, coupling: passive, Stan, TEE types. Optical sources & Photo Detectors: Introduction: creation of photons, LED, laser diode, photo detectors: introduction, PIN photodiode, avalanche photodiode, photodiode parameters, detector noise, speed of response, SNR.

**Modulation scheme for fiber optics transmission:** Introduction, digital modulation, analog modulation schemes, multiplexing.

Unit-III

**Laser -Tissue Interaction:** Terminology, spectral band designations, energy & power, irradiant & radiant exposure, fluence, thermal diffusion fibers & contact tips, Types of laser-tissue interactions

Unit-IV

**Laser Application in Medical Therapy:** Introduction, application in general surgery, dermatology, ophthalmology, cardiovascular & chest surgery, dentistry, neuro surgery, otolaryngology & head and neck surgery, tumor surgery, gynecologic laser, endoscopy, laproscopy, neuroendoscopy

**TEXTBOOKS**
1. Therapeutic Lasers -Theory and practice by G. David Baxter (Churchill livingstone publications)
2. Medical Lasers and their safe use by David H Shiney, Stephen and L. Trokel (Springer-Verlag publications)

Class Work : 25 Marks
Examination : 75 Marks
Total : 100 Marks
Duration of Examination : 3 Hours

Unit-I
Introduction: Introduction to medical imaging technology, systems, and modalities. Image properties: contrast and spatial resolution, digital image representation.
Radiations: Electromagnetic spectrum, structure of atom, interaction of radiation with matter, biophotonics

Unit-II
X-ray imaging: History and Properties of X-rays, attenuation of X-rays in tissue, quantification of X-rays: equivalent dose, effective dose, absorbed dose, patient specific radiation risk estimation.

Unit-III

Unit-IV
Optical imaging: comparison with other imaging modalities, optical coherence tomography.

TEXTBOOKS
1. Introduction to Biomedical Imaging by Andrew G. Webb (Wiley-IEEE press)
2. Fundamentals of Medical Imaging by Paul Suetens (Cambridge University Press, 2009)

REFERENCE BOOKS

Note:
1. In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit. All questions carry equal marks.
2. The students will be allowed to use non-Programmable Scientific Calculator. However, sharing/exchange of calculator are prohibited in the examination.
3. Electronics gadgets including Cellular phones are not allowed in the examination.
INTRODUCTION OF EMBEDDED SYSTEMS: Definition, ingredients of embedded system, requirements & challenges of embedded system design, different types of microcontrollers: Embedded microcontrollers, external memory microcontrollers etc., processor architectures: Harvard V/S Princeton, CISC V/S RISC, microcontrollers memory types, microcontrollers features: clocking, I/O pins, interrupts, timers, and peripherals.

SOFTWARE FOR EMBEDDED SYSTEM DESIGN: Development tools/ environments, Assembly language programming style, Interpreters, High level languages, Intel hex format object files, Debugging.

8051 MICROCONTROLLER: Pin diagram explanation, internal diagram 8051, Instruction Set, Addressing mode, data transfer instruction, logical, arithmetic instruction, bit instruction, branching instruction.

PIC MICROCONTROLLER: Introduction to PIC microcontrollers, features of PIC family microcontrollers, architecture and pipelining, program memory considerations, addressing modes, CPU registers, Instruction set, and simple operations.

APPLICATIONS BASED ON 8051 MICROCONTROLLER: Interfacing of memory, intelligent LCD, 8255, ADC, DAC, LED display, Memory Card, Bio-metric system.

APPLICATION BASED ON PIC MICROCONTROLLERS: Interfacing of Graphical Display, Memory Card, Bio-metric system Music box, Applications like Mouse wheel turning, PWM motor control, ultra sonic distance measuring, Temperature Sensor, Pressure Sensor, Magnetic Field Sensor.

Reference Books:
1. 8051, Scott Mackenize, PHI, Englewood Cliffs, New Jersey.

NOTE:
In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all, at least one from each unit. All questions carry equal marks.
OBJECTIVE
The course aims at developing competence for report writing with a focus on its complex writing techniques and procedures.

COURSE CONTENT
UNIT I
Report Writing
Reports: meaning, their importance and types, Structure of reports, Formats of reports, Use of illustrations

UNIT II
Writing of Business and Technical Reports:
Preliminary steps and procedure of writing report, writing various types of reports on technical, business related topics

RECOMMENDED READING

SCHEME OF END SEMESTER EXAMINATION (MAJOR TEST) AND INSTRUCTIONS FOR THE EXAMINER

1. The duration of the exam will be 2 hours.
2. The Question Paper for this theory course shall have three questions in all covering both the units. All will be compulsory with internal choice.
3. Question no. 1 will be of 10 marks. The question may have two/three parts with enough internal choice, covering various components of both the Units.
4. Question no 2 with internal choice will be of 10 marks covering contents of the Unit I. It will be theoretical in nature.
5. Question no 3 will have two parts of 15 marks each. The student will be asked to write reports on business and technical subject/ issue covering contents of Unit II. The emphasis would be on testing the actual report writing on a given business and technical situation/ subject in letter format.
LIST OF EXPERIMENTS

1. To study biomaterials like Hip implant or Knee implant.
3. Characterization studies of polymeric material using Differential Scanning Calorimetry (DSC).
4. Characterization studies of polymeric material using Thermo Gravimetric analysis studies (TGA).
5. To study the swelling properties of polymeric material like Hydroxy Ethyl Meth Acrylate (HEMA).
6. To study and synthesize Bone Cement.
7. To study Biomechanical properties of given sample using INSTRON machine.
8. To study Corrosion & its type.
9. To study Dental implants.
10. To setup an experimental facility for testing of biomaterials.

Note: Ten experiments are to be performed selecting any seven experiments from the above list. Remaining three experiments may either be performed from the above list, or designed and set by the department as per the scope of the syllabus.
UNIT-I

Healthcare Technology Market: Indian Healthcare Industrial Environment – competence; opportunities and challenges, entrepreneurship and economic growth, status of healthcare industry in India and resource availability, Conception, in-sighting and evaluation of ideas, ecosystem development, sources and decision making, technoeconomics, local and global scenario.

UNIT-II

UNIT-III

UNIT-IV

Case studies on Health Care Entrepreneurship: On the ground solutions for ending poverty, making the Investments needed to end poverty, the Global Impact to end Poverty, case studies on community services for e.g. water borne diseases, disaster management, case study on interface between biomedical sciences and technology.

TEXTBOOKS

3. B.Badhai, Entrepreneurship for Engineers, Dhanpath Rai & Co., Delhi, 2001

REFERENCE BOOKS

Note:

1. In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit. All questions carry equal marks.
2. The students will be allowed to use non-Programmable Scientific Calculator. However, sharing/ exchange of calculator are prohibited in the examination.
3. Electronics gadgets including Cellular phones are not allowed in the examination.
LIST OF EXPERIMENTS

2. (a) Write an assembly language program to add eight 8-bit numbers.
   (b) Write an assembly language program to find average of eight 8-bit numbers.
3. (a) Write an assembly language program to find a maximum number from a given 8-bit ten numbers.
   (b) Write an assembly language program to find a minimum number from a given 8-bit ten numbers.
4. Arrange the given ten 8-bit numbers in ascending order.
5. Generate a square wave of 10kHz at P1.0 Crystal frequency is XXXX.
6. Write a program to transfer data from given memory block B1 to block B2.
7. Interface LED and switch with microcontroller 8051 or PIC.
8. Interface seven segment display with microcontroller 8051 or PIC.
9. Interface LCD with microcontroller 8051 or PIC.
10. Write an assembly language program for External program and test on hardware.
11. Interface stepper motor with microcontroller 8051 or PIC.
12. Interface DC motor with microcontroller 8051 or PIC and control speed using PWM.
13. Write an assembly language program to transfer message serially.
14. Write an assembly language program using interrupts to simultaneously create 7kHz and 500kHz square wave on P1.0 and P1.1 respectively.
15. Design a mini project based on microcontroller.

Note:-
1. Total ten experiments are to be performed in the semester.
2. At least seven experiments should be performed from the above list. Remaining three experiments should be performed as designed and set by the concerned institution as per the scope of the syllabus.
OBJECTIVE
To enable students to develop their speaking skills with professional proficiency

COURSE CONTENT

Oral Presentations:
Group Discussion; Mock interviews

Note for the Teacher:
The teacher concerned, by devising her/his method, must preview and review the student’s spoken proficiency at the beginning and end of the semester respectively to find the efficacy of the course and degree of improvement in the student.

RECOMMENDED READING

SCHEME OF END SEMESTER EXAMINATION (Practical)

An external Practical exam of 30 marks of 2 hour duration for the course will be conducted by an external examiner appointed by the university’s Controller of Exams.

NOTE: Students will be tested for their oral communication competence making them participate in Group discussion, mock situations for interview. Students may also be evaluated through a viva conducted by an external examiner.

The purpose of this course is to inculcate a sense of professionalism in a student along with personality development in terms of quality such as receiving, responding, temperament, attitude and outlook. The student efforts will be evaluated on the basis of his/her performance/achievements in different walks of life.

A Faculty Counselor will be attached to a group of students which will remain associated with him/her during the entire period of the degree program in the University. Each faculty member will serve as a faculty counselor. They will act like a local guardian for the students associated with him/her and will help them in terms of career guidance, personal difficulties.

B. The student will present a written report before the committee with following in view:

The student will present before the committee his/her achievements during the current academic session in the form of a written report highlighting followings:

I. Academic Performance
II. Extra Curricular Activities / Community Service, Hostel Activities (8 Marks)
III. Technical Activities / Industrial, Educational tour (8 Marks)
IV. Sports/games (14 Marks)
V. Moral values & Ethics (15 Marks)

NOTE: Report submitted by the students should be typed on both sides of the paper.

C. A student will support his/her achievement and verbal & communicative skill through presentation before the committee. (30 Marks)

C. Moral values & Ethics

Syllabus - A few topics from the below mentioned books

A minor test/Quiz will be conducted during the semester and it will be the duty of the concerned teacher assigned to teach Moral values & Ethics to submit the awards to respective chairman of the department/Director/Principal.

The evaluation of this course will be made by the following Committee.

University Departments:
1. Chairperson of the Department Chairman
2. Senior Most Faculty Counselor Member
3. Vice- Chancellor’s Nominee Member

Affiliated Colleges:
1. Director/Principal Chairman
2. Head of the Department/Sr. Faculty Member
3. External Examiner to be appointed by the University Member

Note: Remuneration will be paid to the external examiner only (at par with the other practical examinations).

Unit-I

Unit-II
Image Enhancement: Background, Minimum Mean-square Error Restoration, Least square Error Restoration, Constrained Lease square Error restoration, Restoration by singular Value decomposition, Homomorphic filtering.

Unit-III
Image Compression: Fundamentals, Image Compression Models, Error Free compression Techniques, Lossy compression Techniques

Image segmentation: Detection of Discontinuities, Pixel Board approach of segmentation, Multilevel Thresholding, Local Thresholding, Region based approach of segmentation.

Unit-IV

Biomedical Application: Computer Tomography (Radon Transform, Back Projection Operator), MRI Images, Processing of Radiograph, Angiogram, Sonography including Doppler Technique, EEG image processing

REFERENCE BOOKS

Note:
1. In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit. All questions carry equal marks.
2. The students will be allowed to use non-Programmable Scientific Calculator. However, sharing/ exchange of calculator are prohibited in the examination.
3. Electronic gadgets including Cellular phones are not allowed in the examination.
**BME403B  NUCLEAR MEDICINE RADIATION AND SAFETY**

**Unit-I**  
**Introduction:** Properties and effects of radioactive emissions: Isomeric transition, Gamma-ray emission, Internal Conversion, Alpha-Decay, Beta Decay, Positron Decay, Electron Capture and their applications in nuclear medicine.  
**Radiation detectors:** Types: Gas-filled, Solid state & Semiconductor Detectors and applications in nuclear medicine.

**Unit-II**  

**Unit-III**  
**Emission Tomography Techniques:** Introduction, Principles & applications of SPECT, Principle & application of PET, System performance parameters and quality control function.  
**In vitro techniques:** Introduction, Single & double isotope method, Radioimmunoassay, RIA Counting System, Liquid scintillation counting system, RIA application.

**Unit-IV**  
**The computer in NM:** Applications, Image Construction, Frame Modes, Resolution, Pixel Size.  
**Radiation protection and safety:** Units of exposure and dose, Safety of non-ionizing and Ionizing radiation. Stochastic and non-Stochastic effects, Risk Factors, Safety limits, Principles of radiation dosimetry; Internal and External dosimetry.

**Unit-I**

**Ultrasound:** Principles of Ultrasound imaging, Wave propagation and characteristic acoustic impedance, Interaction with tissue, Ultrasound Instrumentation, Diagnostic scanning modes, artifacts in ultrasonic imaging, ultrasonic image characteristics, Color Doppler, Clinical applications of ultrasound, biological effects of ultrasound.

**Unit-II**

**Magnetic Resonance Imaging:** Nuclear Magnetic Resonance: Angular momentum, magnetic dipole moment, magnetization, Larmor frequency, rotating frame of reference and the RF magnetic field. Generation and Detection of NMR Signal: The magnet (superconducting magnets, permanent magnets), magnetic field gradients, the NMR coil/probe, data acquisition. Clinical applications of MRI, biological effects of MRI.

**Unit-III**

**Emission Tomography:** Radioactivity, production of radionuclides, types of radioactive decays, type of detectors and basic principles, nuclear imaging instrumentation: the Anger scintillation camera, Image characteristics. Nuclear Imaging: SPECT instrumentation and clinical applications, PET instrumentation and clinical applications, Flouroscopy

**Unit-IV**

**Radiation Biology and Protection:** Interaction of radiation with tissue, molecular and cellular response to radiation, radiation induced carcinogenesis. Radiation Protection: sources of exposure to ionizing radiations, personnel dosimeter, methods of exposure control, shielding of imaging facilities, prevention of errors in radiology.

Duration of Examination : 3 Hours

**Unit-I**
Challenges of Health and Hospital Administration in New Millennium: Complexity of Hospitals created by ever increasing sophisticated diagnostic tools resulting into high cost (Need of Analysis and Planning), Declining Professional Ethics among specialist and other hospital staff. Analysis of Referral System, Analysis of Hospital Waste Management, Introduction of the latest Technologies to the Hospital Staff, Methods of reducing cost of health services, Analysis of the Quality of Hospital Services, Need of Streamlining the upkeep of Hospital through planning.

**Unit-II**
Socio-economic Development and Health Care and Nature of Health Care Administration: Goals and Aspects of Development and Their Inter-Relationship, Principles, Meaning and Objectives of Health Administration, Nature and Scope of Health Administration, Indicators Measuring Impact of Health Care Administration.
Manpower Planning: Nature, Meaning and Ingredients of Manpower Planning, Development of Manpower Plans, National Health Policy, Patient Management

**Unit-III**

**Unit-IV**
Quality Control and Quality Assurance in Health Care in a Hospital: Meaning and Need of Quality Control, Contents of Quality, Challenges to Setting Standards, Current Methods in Improving Quality and Healthcare.
Hospital Waste Management: Classification, Amount of Hospital Waste, Hazards of Hospital Waste, Collection and Transportation of Hospital Waste, Disposal of Hospital Waste, Case Study.

**TEXTBOOKS**

**Note:**
1. In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit. All questions carry equal marks.
2. The students will be allowed to use non-Programmable Scientific Calculator. However, sharing/exchange of calculator are prohibited in the examination.
3. Electronics gadgets including Cellular phones are not allowed in the examination.
LIST OF EXPERIMENTS

1. Introduction to MATLAB & the Image processing tool box.
2. Digital Image representation in MATLAB.
3. Study image enhancement techniques.
5. Generating Frequency domain filter in MATLAB.
6. Sharpening frequency domain filter.
7. Understanding of the harmonic content of an image using Discrete Fourier transform (DFT).
8. Study image reconstruction from projections.
9. Color Image Representation in MATLAB.

Note: Ten experiments are to be performed selecting any seven experiments from the above list. Remaining three experiments may either be performed from the above list, or designed and set by the department as per the scope of the syllabus.

Total: 50 Marks

At the end of 6th semester each student would undergo four weeks Professional Training in an Industry/ Institute/ Professional / Organization/ Research Laboratory etc. with the prior approval of the Training and Placement Officer of the University and submit in the department a typed report along with a certificate from the organization.

- The typed report should be in a prescribed format.
- The report will be evaluated in the VII Semester by a Committee consisting of three teachers from different specialization to be constituted by the Chairperson of the department. The basis of evaluation will primarily be the knowledge and exposure of the student towards different processes and the functioning of the organization.
- The student will interact with the committee through presentation to demonstrate his/her learning.
- Teachers associated with evaluation work will be assigned 2 periods per week load.
The primary objective of this course is to develop in students the professional quality of synthesis employing technical knowledge obtained in the field of Engineering & Technology through a project work involving design, analysis augmented with creativity, innovation and ingenuity.

Project involving design/ fabrication/ testing/ computer simulation/ case studies etc. which commences in the VII Semester will be completed in VIII Semester and will be evaluated through a panel of examiners consisting of the following:

- Chairman of Department : Chairperson
- Project coordinator : Member Secretary
- Respective project supervisor : Member

The student will be required to submit two copies of his/her project report to the department for record (one copy each for the department and participating teacher).

Project coordinator will be assigned the project load of maximum of 2 hrs. per week including his own guiding load of one hr. However, the guiding teacher will be assigned maximum of one period of teaching load irrespective of number of students/groups under him/her.

The format of the cover page and the organization of the body of the report for all the B.Tech. will be finalized and circulated by the Dean, Faculty of Engineering and Technology.
The purpose of this course is to inculcate a sense of professionalism in a student along with personality development in terms of quality such as receiving, responding, temperament, attitude and outlook. The student efforts will be evaluated on the basis of his/her performance / achievements in different walks of life.

The evaluation will be made by the committee of examiners constituted as under:

1. Dean, Faculty of Engineering & Technology/ Director /Principal of affiliated college : Chairperson
2. Chairperson of the department : Member
3. External expert : Appointed by the university

A. The student will present a written report before the committee with following in view:

The student will present before the committee his/her achievements during the current academic session in the form of a written report highlighting followings:

I. Academic Performance

II. Extra Curricular Activities / Community Service, Hostel Activities (12 Marks)

III Technical Activities / Industrial, Educational tour (12 Marks)

IV Sports/games (16 Marks)

Note: Report submitted by the students should be typed on both sides of the paper.

B. A student will support his/her achievement and verbal & communicative skill through presentation before the examiners. (40 Marks)

C. Faculty Counselor Assignment (20 Marks)

It will be the duty of the student to get evaluated by respective faculty counselor and to submit the counselor assessment marks in a sealed envelope to the committee.

A counselor will assess the student which reflects his/her learning graph including followings:

1. Discipline throughout the year
2. Sincerity towards study
3. How quickly the student assimilates professional value system etc.
4. Moral values & Ethics- Syllabus (one lecture/week on the topics of Human values/Ethics is to be delivered)
Unit-I

Introduction: Definition of innovation, drivers for innovation, types of innovation, innovation practices in healthcare sector, evolution of innovation industry, risks involved.

Unit-II

Design and Planning of healthcare device: Creativity, ideation, brainstorming-mindsets, techniques, exploration, team dynamics. Planning and design aspects involved in new product development, study of market conditions, product feasibility studies, design constraints and solutions. Design thinking- user led innovation.

Unit-III

Latest Biomedical Engineering Innovations in last decade: Understand the need for development of particular device, idea generation, implementation plan, process planning and device development: AbioCor Artificial Heart, Bio-Artificial Liver, Camera Pill, Bionic Contact Lens, iLIMB Bionic Hand, Mind-Reading Device, eLEGS Exoskeleton and EyeWriter

Role of Government and funding agencies in helping healthcare innovation: Innovation and intellectual capital- value, protect, exploit. Scientific techniques for writing of proposals for funding and grants. Role of Government funding agencies in promotion of innovative ideas, different schemes available and details regarding applying to these schemes. Different non-government agencies providing funding to innovators, role of healthcare industry, difficulties and challenges faced by innovators.

Class Work : 25 Marks
Theory : 75 Marks
Total : 100 Marks
Duration of Examination : 3 Hours

Unit-I
Introduction to state variable analysis of control systems: Introduction to state variable concept, definition of state variables, matrix representation of state equation, state transition equation, properties of transition matrix, relationship between state equations and higher order differential equations, state equation and transfer function, characteristics equation, Eigen values & Eigen vectors.

Unit-II
Modern control techniques & Introduction to biological control system: Transformation to phase variables canonical forms of state variables, controllability canonical form, observability canonical form Jordan canonical form, controllability of linear system, observability of linear system relationship among controllability, observability and transfer function. Introduction, Dynamic systems and their control, modeling and block diagrams, the pupil control systems, general structure of control systems, the dynamic response characteristics of the pupil control system, open & close loop systems instability, automatic aperture control.

Unit-III
Mathematical modeling of the system: Thermoregulation, Thermoregulation of cold bloodedness & warm bloodedness, the anatomy of thermo regulation, lumping & partial differential equations, heat transfer examples, mathematical model of the controlled process of the body. Modeling the body as compartments, behavior in simple compartmental system, pharmacy kinetic model, urea distribution model, multi compartmental system. Dissolution of drugs in solid form, distribution and accessibility of body water & tissue compartments, basis for zero order & first order chemical kinetic behavior in the biological system.

Unit-IV
Biological receptors & other Physiological Control Systems: -Introduction, receptor characteristics, transfer function models of receptors, receptor and perceived intensity.
Respiratory model & systems, cardiovascular control system, skeletal muscle servomechanism.

TEXTBOOKS

Unit-I
Heat and Cold in Medicine: Physical basis of heat and temperature, Thermography and temperature scales, mapping of body's temperatures. Heat therapy, use of cold in medicine, Cryosurgery and safety aspects.

Unit-II

Unit-III
Electricity within the body: The nervous system and neurons. Electrical potentials of nerves, Electoretinogram and Electrooculogram, Electrical impedance tomography, Magneto cardiogram and Magneto encephalogram. Electric shock. High frequency & low frequency electricity in medicine and magnetism in medicine, Functional MRI.

Unit-IV
Sound in Medicine: General properties of sound. The body as a drum. The stethoscope, Ultrasound picture of the body. Ultrasound to measure motion, Physiological effects of Ultrasound in Therapy. The production of speech, Artificial speech processing.

Light in Medicine: Measurement of light & its units, Applications of Visual light in medicine, Applications of UV & IR in medicine, LASERS in medicine, Applications of microscopes in medicine.

Class Work : 25 Marks
Examination : 75 Marks
Total : 100 Marks
Duration of Examination : 3 Hours

Unit-I
Introduction: Intelligence, features characterizing intelligence, intelligent instrumentation system; features of intelligent instrumentation; components of intelligent instrumentation system; Block diagram of an intelligent instrumentation system.

Unit-II
Signal Processing: Signal amplification & attenuation (OP-AMP based); Instrumentation Amplifier (circuit diagram, high CMRR & other features); Signal Linearization (different types such as Diode-resistor combination, OP-AMP based, etc.); Bias Removal, Signal filtering (outputs from ideal filters, outputs from constant-k filters, matching of filter sections, active analog filters); Signal integration, Voltage follower (pre-amplifier), voltage comparator, Phase-locked loop, Signal addition, Signal multiplication, Signal Transmission Signal amplification, Shielding, Current loop transmission, Voltage-to-frequency conversion.

Unit-III
Smart Sensors, Interfacing: Primary sensors; Excitation; Compensation (Nonlinearity; look up table method, polygon interpolation, polynomial interpolation, cubic spline interpolation, Approximation & regression; Noise & interference; Response time; Drift; Cross-sensitivity); Information Coding/ Processing; Data Communication; Standards for smart sensor interface, Basic issues of interfacing; Address decoding; Data transfer control; Sample & hold circuit; Other interface considerations.

Unit-IV
BIOMEMS: Introduction; Film sensors (Thick film sensors, Thin film sensors); Semiconductor IC technology – standard methods; Microelectro-mechanical systems (Micro-machining, some application examples), Biomems, Nano-sensors, Biosensors- Common Applications.

TEXTBOOKS
1. Intelligent Instruments by Barney, G.C., Hemel Hempstead (Prentice Hall, 1985)

REFERENCE BOOKS

Note:
1. In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit. All questions carry equal marks.
2. The students will be allowed to use non-Programmable Scientific Calculator. However, sharing/ exchange of calculator are prohibited in the examination.
3. Electronics gadgets including Cellular phones are not allowed in the examination.
BME446B  PRINCIPLES OF BIOENGINEERING
B. Tech. Semester – VIII (Biomedical Engg.)

Unit-I
Introduction to Bioengineering: Overview of bioengineering focused on engineering analysis and design of biological systems. Topics include chemical properties of biological components, rates and equilibrium properties of biological reactions, cellular structure and communication.

Unit-II
Physiological studies: Human Physiological Fluid Mechanics, blood flow in the microcirculation, and other body fluid systems, pulse and wave propagation in blood vessels, mechanical forces on blood vessels: pressure, stretch, and shear force, visco-elasticity and mechanical properties of the vessel, vascular re-modeling and tissue-engineered vascular graft: mechanical factors, biological molecular structure and function, computational modeling of protein structure and function, molecular structure/ function of Neuro-degeneration.

Unit-III
Engineering Design of Physiological Models: Membrane Potentials & Cable Model, Hodgkin Huxley Model, Dielectric Properties of Cells & Biopolymers, Quantitative Physiology of Brain Blood Flow, Visual System Psychophysical Bioengineering: Matching warning signals to the properties of the eye and the visual nervous system. Operating parameters, Operating and non-operating environmental stimuli, Test requirements, external dimensions, maintenance and testability provisions, materials requirements, reliability requirements, external surface treatment, design life.

Unit-IV
Genetic Engineering: Genetic programming of biological systems, and engineering balances and systems analysis. Application of these concepts to engineering biological systems for diverse areas, including health and medicine, biomanufacturing, and sustainability, is emphasized. Includes an introduction to MATLAB as a problem-solving tool.

TEXT BOOKS
1. S. Berger, Introduction to Bioengineering

REFERENCE BOOKS

Note:
1. In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit. All questions carry equal marks.
2. The students will be allowed to use non-Programmable Scientific Calculator. However, sharing/ exchange of calculator are prohibited in the examination.
3. Electronics gadgets including Cellular phones are not allowed in the examination.
Introduction: Basic definition of tissue engineering, Structural organization of tissues: Epithelial, connective; vascularity and angiogenesis, basic wound healing, cell migration, current scope of development and use in therapeutic and in-vitro testing.

Cell culture: Different types of cell, progenitor cells and cell differentiations, different kind of matrix, cell-cell interaction. Aspect of cell culture: cell expansion, cell transfer, cell storage and cell characterization, Immunomodulation and Immunoisolation, Bioreactors.

Molecular biology aspects: Cell signaling molecules, growth factors, hormone and growth factor signaling, growth factor delivery in tissue engineering, cell attachment: differential cell adhesion, cell migration, cell-cell communication, receptor-ligand binding, and Cell surface markers.

Scaffold and transplant: Engineering biomaterials for tissue engineering, Degradable materials (collagen, silk and polylactic acid), porosity, mechanical strength, 3-D architecture and cell incorporation. Engineering tissues for replacing bone, cartilage, tendons, ligaments, skin and liver. Basic transplant immunology stems cells: introduction, hepatopoiesis.

Case study and regulatory issues: Mechanical properties of Biological tissues, Transport properties of biological tissues, Cell transplantation for liver, musculoskeletal, cardiovascular, neural, visceral tissue engineering. Ethical, FDA and regulatory issues of tissue engineering.

TEXTBOOKS

REFERENCE BOOKS
2. Introduction to Biomedical Engg., Endarle, Blanchard &Bronzino, Academic press.

Note:
1. In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit. All questions carry equal marks.
2. The students will be allowed to use non-Programmable Scientific Calculator. However, sharing/ exchange of calculator are prohibited in the examination.
3. Electronics gadgets including Cellular phones are not allowed in the examination.
Unit-I

Introduction and Brain machine interface: Neurophysiology; neural plasticity; neurological dysfunctions; history and growth of neuro-engineering. Machine interface: human voluntary motor control system; biomaterials, configurations, and characteristics of implantable multi-array electrodes, action potentials, resting potentials and local field potentials; cortical signal recording and decoding; clinical applications, ECoG-based brain-machine interface; brain-machine interface based on surface EEG/MEG recording; clinical applications.

Unit-II

Peripheral-nerve-machine interface and Muscle-machine interface: Nerves, Nerve structure, Volume Conductor Effects, Recorded nerve signals. Nerve stimulation due to current flow, response to stimulation (strength-duration curve, twitch response, tetanic contractions, force-pulse frequency effect, force-modulation frequency), design of stimulators, uses of muscle stimulation, simulation of neuron activation,fferent neural signal recording and decoding, biomaterial, configuration, and characteristics of implantable electrodes, intramuscular EMG recording and decoding, targeted muscle re-inervation, clinical applications

Unit-III

Technologies in prosthetics and orthotics & Deep Brain Stimulation (DBS): Human-robot interaction and integration; clinical needs for advancing the bionic legs and arms; ethical issues in neural-machine interface, Implantable electrodes; brain pacemaker; surgery; applications for interfering the epileptic seizure; applications to Parkinson Disease, gamma knife.

Unit-IV

Functional electrical stimulation and other technologies in neuro-motor rehabilitation: Peripheral nerve stimulation; type of stimulation electrodes, clinical applications, mechanisms for neuro-motor rehabilitation, robotics and virtual reality in physical therapy; transcranial magnetic stimulation (TMS). Human visual system; type of electrodes; surgery for electrode placement, clinical applications, human auditory system; stimulation system and electrodes; surgery; clinical applications: cochlear stimulators

3. Electronics gadgets including Cellular phones are not allowed in the examination.
Unit-I
Anatomical and Physiological basis of Bioelectromagnetism: Nerve and Muscle Cells, Subthreshold Membrane Phenomena, Active Behavior of the Membrane, Synapses, Receptor Cells, and Brain, The Heart
Bioelectric Sources and Conductors and their Modeling: Volume Source and Volume Conductor, Source-field Models, Bidomain Model of Multicellular Volume Conductors, Electronic Neuron Models

Unit-II
Theoretical Methods in Bioelectromagnetism: Theoretical Methods for Analyzing Volume Sources and Volume Conductors, Theory of Biomagnetic Measurements
Electric and Magnetic Measurement of the Electric Activity of Neural Tissue: Electroencephalography, magnetoencephalography

Unit-III
Electric and Magnetic Measurement of the Electric Activity of the Heart: 12-lead ECG-system, Vectorcardiographic Lead Systems, Other ECG Lead Systems, Distortion Factors in the ECG, Basis of ECG Diagnosis, Magnetocardiography

Unit-IV
Electric and Magnetic Stimulation of Neural Tissue: Functional Electric Stimulation, Magnetic Stimulation
Electric and Magnetic Stimulation of the Heart: Cardiac Pacing, Cardiac Defibrillation
Measurement of the Intrinsic Electric Properties of Biological Tissues: Impedance Plethysmography, Impedance Tomography, Electrodermal Response

Unit-I

**Introduction to MEMS:** Introduction to BioMEMS; Historical background – Smart Materials and structures, Microsystems and their advantages. Materials used – Technology involved in MEMS. General Application in Healthcare

**Micromachining Technology:** Soft Lithography, Etching, Ion implantation, wafer bonding, integrated processing, Wet & Dry Bulk micro machining, surface micromachining, coating Technology and CVD –LIGA process

Unit-II

**Principles of Microsystems:** General principles – Microsystems – Pressure system; Actuators, Electrostatic forces; Piezoelectric Crystals.

Unit-III

**BIOMEMS:** Special features, Requirements for medical applications, MEMS for Health care, Drug delivery systems, Application in Blood pressure sensors, Biochip, Micro needles, Microelectrodes, Prosthesis and catheter end sensors

Unit-IV

**Biomedical NanoTechnology:** Trends in Biomedical NanoTechnology; Drug Delivery Systems and Drug Synthesis; NanoTechnology in diagnostics; nano-enabled components for biodefense; implants and prosthetics, Toxicity in nanomaterials

TEXTBOOKS
1. Biomedical NanoTechnology ;Neelina H Malsch ; CRC (2005)

REFERENCE BOOKS

Note:
1. In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit. All questions carry equal marks.
2. The students will be allowed to use non-Programmable Scientific Calculator. However, sharing/ exchange of calculator are prohibited in the examination.
3. Electronics gadgets including Cellular phones are not allowed in the examination.
Unit-I

Unit-II

Unit-III

Unit-IV
Device regulation: Classifications and requirements of Medical devices, Harmonized standards ,CE approval , Quality Assurance and Quality – Definition of quality, quality management, principles of TQM, measures for Quality Control. Safety & Testing of Medical devices - patenting.

TEXT BOOKS
1. Ronald Munson's Intervention and Reflection: Basic Issues in Medical Ethics 5th Ed.

REFERENCE BOOK

Note:
1. In the Semester examination, the examiner will set 08 questions in all selecting two from each unit. The candidates will be required to attempt five questions in all selecting at least one from each unit. All questions carry equal marks.
2. The students will be allowed to use non-Programmable Scientific Calculator. However, sharing/ exchange of calculator are prohibited in the examination.
3. Electronics gadgets including Cellular phones are not allowed in the examination.
LIST OF EXPERIMENTS

1. To simulate the linear lung mechanics model using MATLAB.
2. To realize simple simulink model of muscle stretch reflex using MATLAB.
3. To develop a simulink program to determine the steady-state operating point of the ventilatory control system using MATLAB.
4. To realize simulink implementation of neuromuscular reflex model using MATLAB.
5. To realize simulink implementation of cardiovascular variability model using MATLAB.
6. To develop simulink model of blood glucose – insulin regulation using MATLAB.
7. To develop simulink model of circulatory control that accounts for the effect of respiration on heart rate and arterial blood pressure using MATLAB.
8. To simulate patient ventilator system using MATLAB.
9. To simulate steady state neuromuscular reflex using MATLAB.
10. To simulate respiratory sinus arrhythmia using MATLAB.

Note: Ten experiments are to be performed selecting any seven experiments from the above list. Remaining three experiments may either be performed from the above list, or designed and set by the department as per the scope of the syllabus.
The objectives of the course remain:
- To learn how to carry out literature search
- To learn the art of technical report writing
- To learn the art of verbal communication with the help of modern presentation techniques

A student will select a topic in emerging areas of Engineering & Technology and will carry out the task under the observation of a teacher assigned by the department.

He/She will give a seminar talk on the same before a committee constituted by the chairperson of the department. The committee should comprise of three faculty members from different specializations. The teacher associated in the committee will be assigned 2 hours teaching load per week.

However, guiding students’ seminar will not be considered towards teaching load.

The format of the cover page and the organization of the body of the seminar report for all the undergraduate programs will be finalized and circulated by the Dean, Faculty of Engineering and Technology.
The project started in VII Semester will be completed in VIII Semester and will be evaluated through a panel of examiners consisting of the following:

Chairperson of Department : Chairperson  
Project coordinator : Member  
External expert : To be appointed by the University

The student will be required to submit two copies of his/her project report to the department for record (one copy each for the department and participating teacher).

Project coordinator will be assigned the project load of, maximum of 2 hrs. per week including his own guiding load of one hr. However, the guiding teacher will be assigned maximum of one period of teaching load irrespective of number of students/groups under him/her.

The format of the cover page and the organization of the body of the report for all the B. Tech. will be finalized and circulated by the Dean, Faculty of Engineering and Technology.

Note:
1 Every student has to participate in the sports activities. Minimum one hour is fixed for sports activities either in the morning or evening. Weightage of Sports is given in General Proficiency Syllabus.
2 Students will be permitted to opt for any one elective run by the other department. However, the department shall offer those elective for which they have expertise. The choice of the students for any elective shall not be binding for the department to offer, if the department does not have expertise. The minimum strength of the students should be 20 to run an elective.
3 Assessment of Professional Training-II, undergone at the end of VI semester, will be based on seminar, viva-voce, report and certificate of Professional Training obtained by the student from the industry, institute, research lab, training center etc.
4 The students will be allowed to use non-programmable scientific calculator. However, sharing/exchange of calculator is prohibited in the examination.
5 Electronics gadgets including Cellular phones are not allowed in the examination.

Unit-I

Unit-II

Unit-III
ENTREPRENEURSHIP DEVELOPMENT AND GOVERNMENT: Role of Central Government and State Government in promoting Entrepreneurship - Introduction to various incentives, subsidies and grants - Export Oriented Units - Fiscal and Tax concessions available; Role of Central/State agencies in the Entrepreneurship Development - District Industries Centers (DIC), Small Industries Service Institute (SISI), Entrepreneurship Development Institute of India (EDII), National Institute of Entrepreneurship & Small Business Development (NIESBUD), National Entrepreneurship Development Board (NEDB).

Unit-IV
PROJECT MANAGEMENT AND CASE STUDIES

Texts and References:
2. Entrepreneurship - Hisrich Peters.
3. The Culture of Entrepreneurship - Brigitte Berger.
5. Dynamics of Entrepreneurship Development - Vasant Desai.
7. Thought Leaders - Shrinivas Pandit.
8. Entrepreneurship, 3rd Ed. - Steven Brandt.
10. The Entrepreneurial Connection - Gurmit Narula.

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.

Class Work: 25 Marks  
Examination: 75 Marks  
Total: 100 Marks  
Duration of Examination: 3 Hours  

Unit-I  
MONOCHROME TV (PICTURE AND CAMERA TUBES): Monochrome picture tube, beam reflection, Beam focusing, Screen Phosphor, Face plate, Picture tube characteristics, picture tube circuit controls, Monochrome Camera Tubes: Basic principle, Image Orthicon, Vidicon, Plumbicon  

Unit-II  
COLOUR TV ESSENTIALS: Compatibility, Colour perception, Three Colour theory, Luminance, Hue and Saturation, Dispersion and Recombination of light, Primary and secondary colours, Luminance signal, Chrominance Signal, Colour picture tube, colour TV Camera, Colour TV display Tubes, colour Signal Transmission, Bandwidth for colour signal transmission, Colour TV controls. Cable TV, Block Diagram and principle of working of cable TV.  
PLASMA AND LCD: Introduction, liquid crystals, types of LCD’s, TN, STN, TFT, Power requirements, LCD working, Principle of operation of TN display, Construction of TN display, Behaviour of TN liquid crystals, Viewing angle, colour balance, colour TN display, limitations, advantages, disadvantages, applications.  

Unit-III  
LED AND DMD: Introduction to LED Television, comparison with LCD and Plasma TV’s, schematic of DMD, introduction to Digital MicroMirror device, Diagram of DMD, principle of working, emerging applications of DMD.  
MICROWAVE OVENS AND AIR CONDITIONERS: Microwaves, Transit Time, Magnetron, Waveguides, Microwave Oven, Microwave Cooking. Air conditioning. Components of air conditioning systems, all water Air conditioning systems, all air air conditioning Systems, Split air conditioner.  

Unit-IV  
MICROPHONES: Introduction, characteristics of microphones, types of microphone: Carbon, Moving coil, Wireless, Crystal, introduction to tape recorder.  
LOUDSPEAKER: Introduction to ideal and basic loudspeaker, loudspeaker construction types of loudspeaker: Dynamic and permanent magnet, woofers, tweeters, brief introduction to baffles, equalisers.  

TEXTBOOKS:  
1. Consumer Electronics by S. P. Bali (Pearson Education)  
2. Complete Satellite and Cable T.V by R. R. Gulati (New Age International Publishers)  

REFERENCE BOOKS:  
1. Monochrome and Colour Television by R. R. Gulati  

Note:  
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.  
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
INTRODUCTION TO THE POWER DISTRIBUTION SYSTEM: Description of the power distribution system- voltage levels, Components of the distribution system- Substation, Transformer, feeders, distribution system planning, operation & maintenance objectives, activities involved in O&M, grid management, load scheduling & dispatch, load balancing, 66-33/11KV substation equipment, 11/0.4 KV substation equipment. Distribution transformers- reasons for DT failures.

ENERGY ACCOUNTING & ENERGY AUDIT: Need for energy accounting, objectives & functions of energy accounting, Energy flow diagram in power distribution system, energy accounting procedure- Energy measurement, and problems in energy accounting & overcoming these problems in energy accounting, Definition, need and types of energy audit, energy audit instruments, procedure for conducting an energy audit.

DEMAND SIDE MANAGEMENT: An introduction, Why DSM?, Benefits of DSM, DSM in power systems: load management, DSM techniques and emerging trends, EC Act 2001, DSM on consumer side – the industrial sector, the agricultural sector, the domestic & commercial sectors, ESCO-a route for DSM.

Unit-I
ENERGY SOURCES & AVAILABILITY: World energy situation. Indian energy scenario. Comparative study of thermal, hydro, nuclear and gas power plants. Impact of thermal, gas, hydro and nuclear power stations on environment, air and water pollution, green house effect (global warming), Plasma confinement - magnetic confinement and inertial confinement, geothermal, hydrogen energy, fuel cells, Alkaline fuel cells (AFC), Solid oxide fuel cell (SOFC), Molten carbonate fuel cells (MCFC), thermo-electric power, MHD power generation OTEC & tidal waves.

Unit-II

Unit-III

Unit-IV

TEXT BOOKS:
1. Electric Power Generation, B.R.Gupta
3. Power Plant Engg: G.D. Rai

REFERENCE BOOKS:
1. Renewable Energy Resources: John Twidell and Tony Weir

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.

Unit-I  
**Introduction:** Internet, intranet and extranet, networking, protocols, genomic data, organization, representation, data base management systems.

**Sequencing Data Bank:** Introduction, collecting and storing sequence in laboratory, nucleic acid data bank – Gen Bank, EMBL, AIDS and RNA, protein data bank (PDB), cambridge structural database CSD, genome data bank, hybridoma data bank structure and others.

Unit-II  
**Sequence Analysis:** Analysis tools for sequence data banks, pair wise alignment: NEEDLEMAN and WUNSCH algorithms, Smith Waterman, multiple alignment – CLUSTAL-W, BLAST, FASTA, sequence patterns and motifs and profiles.

**Predictions:** Secondary and tertiary structure: algorithms Chao-Fasman algorithm, hidden Markov model, neural networking, protein classification, fold libraries, fold recognition (threading), homology detection, SRS-access to biological data banks.

Unit-III  
**Phylogenetic Analysis** – Basic concepts in systematics, taxonomy and phylogeny, phylogenetic trees- various types and their construction, tree building methods, distance methods, multiple alignment character based method, phylogenetic software.

**Managing Scientific Data:** Introduction, challenges faced in integration of biological information, SRS, Kleisli Query System TAMBIS, P/FDM mediator for a bioinformatics database, federation, discovery link and data management.

Unit-IV  
**Genomics & Proteomics:** Genome mapping, assembly and comparison, functional genomics: sequence based approaches & microarray based approaches, proteomics: technology of protein expression analysis & posttranslational modifications, protein sorting, protein-protein interaction.

**TEXT / REFERENCE BOOKS:**

- Developing Bioinformatics Computer Skill, ed. Gibes & Jombeck, Shroff Publication
- Bioinformatics, ed. David W. Mount

**Note:**
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.

Class Work : 25 Marks
Examination : 75 Marks
Total : 100 Marks

Duration of Examination : 3 Hours

UNIT-I

UNIT-II

UNIT-III

NOISE & POLLUTION: Reduction of noise – Internal & external pollution control through alternate fuels / power plants – Catalytic converters and filters for particulate emission.

UNIT- IV

VEHICLE OPERATION AND CONTROL: Computer control for pollution and noise control and for fuel economy – Transducers and actuators – Information technology for receiving proper information and operation of the vehicle like optimum speed and direction.

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.
2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
CE451B POLLUTION & CONTROL
B. Tech. Semester – VII (Open Elective)

- L T P Credits
4 - -- 4

Class Work : 25 Marks
Examination : 75 Marks
Total : 100 Marks
Duration of Examination : 3 Hours

Unit-I
WATER POLLUTION – Classification of water pollutants, water characteristics, effluent standards, primary treatment, secondary treatment – aerobic (activated sludge, aerated lagoons, trickling filter, roughing filter, rotating biological contactor) anaerobic (contact process, UASB).

Unit- II
AIR POLLUTION: Classification of air pollutants: Particulates: Physical characteristics, mode of formation, setting properties, Control measures.

Unit-III
SOLID WASTE: Types, sources and properties of solid waste, methods of solid waste treatment and disposal
SOLID WASTE MANAGEMENT – Generation, Collection and techniques for ultimate disposal, Elementary discussion on resource and energy recovery.

Unit- IV
Elementary treatment of nuclear pollution, metal pollution, noise pollution their effects & control.
Trace element: Mechanism of distribution, essential and non essential elements, trace of element in marin environment, its ecological effects and biological effects.

2. Metacaf – EDDY – Waste-water engineering revised by George Teholonobus (TMH)

Note:
1. In the semester examination, the examiner will set two questions from each unit (total 08 questions in all), covering the entire syllabus. The students will be required to attempt only 5 questions selecting at least one question from each unit.

2. The use of scientific calculator will be allowed in the examination. However, programmable calculator and cellular phone will not be allowed.
CSE411B MANAGEMENT INFORMATION SYSTEM
B. Tech. Semester – VII (Open Elective)

- L T P Credits
4 - -- 4

Class Work : 25 Marks
Examination : 75 Marks
Total : 100 Marks
Duration of Examination : 3 Hours

Unit-I

FOUNDATIONS:-
INFORMATION SYSTEM: Introduction to Information System and MIS, Decision support and decision making systems, systems approach, the systems view of business, Managing the digital firm, Electronic Commerce and Electronic business, DBMS, RDBMS, introduction to Telecommunication and Networks
IT.INFRASTRUCTURE:- Managing Hardware Assets, Managing Software Assets, Managing Data Resources, Internet And New It Infrastructure.

Unit-II

CONCEPTUAL SYSTEM DESIGN: Define the problems, set systems objective, establish system constraints, determine information needs determine information sources, develop alternative conceptual design and select one document the system concept, and prepare the conceptual design report. Information Systems Security and Control, Ethical and Social Impact of Information Systems.

Unit-III

DETAILED SYSTEM DESIGN: Inform and involve the organization, aim of detailed design, project management of MIS, detailed design, identify dominant and trade of criteria, define the sub systems, sketch the detailed operating sub systems and information flow, determine the degree of automation of each operation, inform and involve the organization again, inputs outputs and processing, early system testing, software, hardware and tools propose an organization to operate the system, documentation of detailed design

Unit-IV

IMPLEMENTATION, EVALUATION AND MAINTENANCE OF THE MIS: Plan the implementation, acquire floor space and plan space layouts, organize for implementation, develop procedures for implementation, train the operating personnel, computer related acquisitions, develop forms for data collection and information dissemination, develop the files test the system, cut-over, document the system, evaluate the MIS control and maintain the system. Pitfalls in MIS development, Redesigning the organization with Information systems, Managing Knowledge Work.
